<sup>1</sup> Based on enumerated resident population as of April 1. <sup>2</sup> As of December 31. <sup>3</sup> Comprises all publicly and privately owned land within authorized boundaries of national forests, purchase units, national grasslands, and utilization projects. <sup>4</sup> Based on estimated resident population as of July 1. <sup>5</sup> Includes data not distributed by State. <sup>6</sup> U.S. total does not add due to independent rounding. <sup>7</sup> Excludes data not shown separately by State.

Table C. States

## Water Consumed, Pollutants, and Capital Expenditures

Region, division, and State	Fresh water consumed per day, 1980		Air pollutant emissions, 1982										Pollution abatement, capital expenditures by manufactures, 1983		
			Particulates		Sulfur oxides		Nitrogen oxides		Hydrocarbons		Carbon monoxide				
	Total (Mil. gal.)	Per capita <sup>1</sup> (Gal.)	Total (1,000 tons)	Percent change, 1980-1982	Total (1,000 tons)	Percent change, 1980-1982	Total (1,000 tons)	Percent change, 1980-1982	Total (1,000 tons)	Percent change, 1980-1982	Total (1,000 tons)	Percent change, 1980-1982	Total (Mil. dol.)	Percent change, 1982-1983	Percent for air pollution abatement

<sup>1</sup> Due to different processing and weighting procedures, U.S. totals may differ from the sum of the States. <sup>2</sup> Data not strictly comparable with later years due to differing benchmarks.  
<sup>3</sup> Unemployed as a percent of the civilian labor force in each specified group. <sup>4</sup> State data may not add to U.S. total since U.S. total was derived independently.

Table C. States

## Nonagricultural Employment, by Industry Group

Region, division, and State	Nonagricultural employment, industry group, <sup>1</sup> 1984															
	Mining		Construction		Manufacturing		Transportation, communications, and public utilities		Wholesale and retail trade		Finance, insurance, and real estate		Services		Governments	
	Total (1,000)	Percent change, 1980-1984	Total (1,000)	Percent change, 1980-1984	Total (1,000)	Percent change, 1980-1984	Total (1,000)	Percent change, 1980-1984	Total (1,000)	Percent change, 1980-1984	Total (1,000)	Percent change, 1980-1984	Total (1,000)	Percent change, 1980-1984	Total (1,000)	Percent change, 1980-1984

<sup>1</sup> The sum of States, region, and division totals may differ from the U.S. totals because some States have more recent benchmarks than others and because of the effects of differing industrial and geographic stratification. <sup>2</sup> Data for 1980 excludes data not available separately by State. <sup>3</sup> Data for 1980 includes mining for selected States. <sup>4</sup> Data for 1980 combined with services, not available separately. <sup>5</sup> Data for 1980 includes mining. <sup>6</sup> Excludes Hawaii. <sup>7</sup> Data for 1980 for Utah excludes agriculture services (SIC 074, 075, and 078) and nonclassifiable establishments (SIC 99).

Table C. States

## Average Annual Pay and Production Workers Earnings

Region, division, and State	Average annual pay																Average hourly earnings for production workers in manufacturing (Dol.)			
	Total (Dol.)			Average annual percent change		Percent of U.S. average		Private industry group, 1983 (Dol.)

<sup>1</sup> Based on resident population estimated as of July 1. <sup>2</sup> Includes local shares of State-supported taxes. <sup>3</sup> Includes other taxes, not shown separately. <sup>4</sup> Data for some States exclude State-collected supplemental local sales taxes imposed by local governments under State enabling legislation, as well as locally administered taxes. See text for a list of such States. In addition, unless otherwise indicated, food purchases for consumption off premises and prescription drugs are exempt from the tax. <sup>5</sup> Excludes District of Columbia. <sup>6</sup> Prescription drugs exempt from sales tax. <sup>7</sup> Neither foods nor prescription drugs exempt from sales tax. <sup>8</sup> Rate is 40 percent of wholesale price. <sup>9</sup> Combined State and county rates are: Hawaii, 13.5 cents; Honolulu, 15 cents; Kauai, 12.5 cents; and Maui, 14.5 cents.

Table C. States

## State Unemployment Compensation Systems and Local Government Finances

<sup>1</sup> A firm is counted in each State in which it operates one or more establishments. Therefore, unduplicated counts of firms are not available for regions and divisions. <sup>2</sup> For week including March 12. Excludes government employees, self-employed persons, farm workers, domestic service workers, railroad employees subject to the Railroad Retirement Act, or employees on oceanborne vessels and in foreign countries. <sup>3</sup> Includes data not shown separately by State. <sup>4</sup> Excludes data not shown separately by State.

Table C. States

## Employment and Payroll and Research and Development Obligations

Region, division, and State	Private nonfarm employment, <sup>1</sup> 1982--Con.								Federal obligations for research and development and plant						
	Employment (1,000)				Annual payroll (Mil. dol.)				1982						
	Employment-size class of establishment				Employment-size class of establishment				Total (Mil. dol.)	Per- cent of U.S.	Research and development (Mil. dol.)	Plant (Mil. dol.)	1981 (Mil. dol.)	1980 (Mil. dol.)	1975 (Mil. dol.)

<sup>1</sup> Excludes States producing less than 500,000 birds. <sup>2</sup> U.S. totals include offshore areas not associated with a State, but U.S. total includes data for States with data not disclosed. <sup>3</sup> Excludes data not shown separately by State. <sup>4</sup> Includes broilers destroyed due to the outbreak of avian influenza in 1983. <sup>5</sup> Data for States will not add to U.S. total because State and U.S. totals were independently derived. <sup>6</sup> Delaware included with Maryland. <sup>7</sup> District of Columbia included with Delaware.

Table C. States  
Mineral Industries and Mineral Production Value

Region, division, and State	Mineral industries, 1982 <sup>1</sup> --Con.										Mineral production value					
	Production workers				Value of ship-ments and receipts (Mil. dol.)	Value added in mining (Mil. dol.)	Capital ex-pen-ditures (Mil. dol.)	Percent change, 1977-1982			Total (Mil. dol.)				State rank	
	Number (1,000)	Work hours (Mil-lions)	Wages					All em-ploy-ees	Value of ship-ments and receipts	Value added in mining	1982	1981	1980	1975	1982	1975
			Total (Mil. dol.)	Average per pro-duc-tion worker (Dol.)

<sup>1</sup> Except as indicated below and in text, data include Standard Industrial Classification (SIC) Codes 24 Lumber and wood products; 25 Furniture and fixtures; and 26 Paper and allied products. See text for details. <sup>2</sup> Processors and wholesalers. <sup>3</sup> Includes data not available by State. <sup>4</sup> Includes American Samoa and Puerto Rico. <sup>5</sup> Data not comparable with data for other States. See text. <sup>6</sup> Data may include States from other regions and divisions, not available separately, or exclude States from specified regions and divisions. See text. <sup>7</sup> Paper and allied products with an employment range of 250 to 499. <sup>8</sup> Lumber and wood products with an employment range of 1,000 to 2,499.

Table C. States  
Construction Industries

Region, division, and State	Construction industries, 1982 <sup>1</sup>													
	All establishments		Establishments with payroll											
	Number (1,000)	Business receipts (Mil. dol.)	Number (1,000)	Employees <sup>2</sup> (1,000)		Payroll			Construction receipts (Mil. dol.)			Value added (Mil. dol.)	Capital expen- ditures <sup>5</sup> (Mil. dol.)	Assets <sup>6</sup> (Mil. dol.)
				Total	Con- struc- tion workers	Total (Mil. dol.)	Aver- age per em- ployee (Dol.)	Con- struc- tion workers (Mil. dol.)	Total	Work in home State <sup>3</sup>	Net <sup>4</sup>

<sup>1</sup> Data for 1982 not comparable with earlier years because of a change in inventory accounting method. <sup>2</sup> Ranked by value added. <sup>3</sup> Data for States will not add to U.S. total because State and U.S. totals were independently derived.

**Table C. States  
Manufactures**

Region, division, and State	Manufactures--Con.																		
	New capital expenditures			Inventories <sup>1</sup> (Mil. dol.)		1983								Export-related employment (direct and indirect), 1981					
	1982			1977, total (Mil. dol.)	1982	1977	All employees		Production workers			Value added by manu- facture (Mil. dol.)	Value of ship- ments (Mil. dol.)	New capital expenditures		Employment		Shipments	
	Total (Mil. dol.)	Average per production worker (Dol.)	Number (1,000)				Payroll (Mil. dol.)	Number (1,000)	Work- hours (Mil.)	Wages (Mil. dol.)	Total (Mil. dol.)			Average per production worker (Dol.)	Total (1,000)	Percent of total manu- facturing	Total (Mil. dol.)	Percent of total ship- ments

<sup>1</sup> Includes electricity sales and energy losses in the generation and transmission of electricity. Losses were allocated to State in proportion to sales. <sup>2</sup> U.S. totals include expenditures for net import of coal coke (expenditures by State are not available). Excludes expenditures by electric utilities for fuel consumed to generate electricity. <sup>3</sup> Includes net imports of coal coke not allocated by State.

Table C. States  
Energy Expenditures and Prices

Region, division, and State	Energy expenditures--Con.											Energy prices (Dol. per Mil. Btu)			
	Percent of State personal income		Source, 1981 (Mil. dol.)					End-use sector, 1981 (Mil. dol.)				Average for fuels and electricity <sup>2</sup>			
	1981	1973	Petroleum products		Natural gas <sup>1</sup>	Coal <sup>1</sup>	Elec- tricity purchases	Resi- dential	Com- mercial	Indus- trial	Trans- porta- tion	1981	1980	1975	1973
			Total <sup>1</sup>	Gas-o- line

<sup>1</sup> Represents gross generation less the electric energy consumed at the generating station for station use. Totals include production from wood and waste and geothermal sources as well as sources listed for 1983. <sup>2</sup> Represents occurrence where the amount of energy expended for pump storage hydropower exceeds the amount of energy consumed.

Table C. States

## Electric Utility Capacity, Customers and Revenue

Region, division, and State	Electric utility energy--Con.						Electric utilities, 1983								
	Installed capacity (Mil. kW)						Ultimate customers, Dec. 31 (1,000)			Electricity consumed per customer (kWh)			Average revenue per kWh sold (Cents)		
	Type of prime mover, 1983						Resi- den- tial	Com- mer- cial	Indus- trial	Resi- den- tial	Com- mer- cial	Indus- trial	Resi- den- tial	Com- mer- cial	Indus- trial

## Geographic Concepts

### METROPOLITAN STATISTICAL AREAS

**Concepts.**—The general concept of a metropolitan statistical area (MSA), presented in tables A and B, is that of a geographic area consisting of a large population nucleus—a census-defined “urbanized area”—together with adjacent communities that have a high degree of economic and social integration with that nucleus. The MSA classification is a statistical standard, developed for use by Federal agencies in the production, analysis, and publication of data on metropolitan areas. The MSA’s are designated and defined by the Office of Management and Budget, following a set of official published standards. These standards have been developed by the interagency Federal Committee on Metropolitan Statistical Areas, with the aim of producing definitions that are as consistent as possible for all MSA’s nationwide. The committee is composed of representatives of the major statistical agencies of the Federal Government.

To meet the needs of various groups of users, the standards provide for a flexible structure of metropolitan definitions by creating three sets of areas: Metropolitan statistical areas (MSA’s), consolidated metropolitan statistical areas (CMSA’s), and primary metropolitan statistical areas (PMSA’s).

Each MSA has one or more “central counties,” containing the area’s main population concentration. An MSA also may include outlying counties that have close economic and social relationships with the central counties. Such counties must have a specified level of commuting to the central counties and also must meet certain standards regarding metropolitan character, such as high population density. In New England, MSA’s are composed of cities and towns rather than whole counties.

Each MSA has at least one “central city.” The titles of MSA’s include up to three central city names, as well as the name of each State into which the MSA extends. Additional places not in the title also can be central cities.

In MSA’s with a population of 1 million or more, PMSA’s may be identified. Each such area consists of a large urbanized county or cluster of counties that demonstrates very strong internal economic and social links, in addition to close ties to neighboring areas; local opinion must support separate recognition of PMSA’s. When PMSA’s are defined, the MSA of which they are component parts is redesignated a CMSA. Not all PMSA’s have a central city.

The standards for establishing MSA’s, CMSA’s, and PMSA’s are divided into 16 numbered sections, which are presented at

the end of the “Geographic Concepts and Codes.” Each section deals with a different specific aspect of the definition and identification process.

To aid users who want to become more familiar with the MSA standards and how they are applied, the following documents are available from the Federal Committee on MSA’s, Population Division, Bureau of the Census, Washington, DC 20233: (1) *Summary of the Standards Followed in Establishing Metropolitan Statistical Areas*, (2) *Official Standards for Establishing Metropolitan Statistical Areas*, (3) *General Procedures and Definitions*, (4) *Detailed Procedures*, and (5) *Background and Rationale for the Official Standards*.

**Historical development.**—In 1910, the Bureau of the Census introduced “metropolitan districts” as an area classification. This marked the first use by the Bureau of the Census of a unit for reporting population data for large cities and their suburbs. Originally, only cities of at least 200,000 population were designated as the core of a metropolitan district. By 1940, the concept had been expanded to apply to a city of 50,000 or more inhabitants. The metropolitan district was generally defined to include contiguous minor civil divisions (MCD’s) having a population density of at least 150 persons per square mile; therefore, the boundaries did not necessarily follow county lines. A major limitation of the metropolitan district concept, from the standpoint of statistical presentation, was that not many data items beyond those available from the census of population and housing were available for MCD’s. The applicability of the metropolitan district concept also was limited because other generally similar area classifications were in use (e.g., the industrial areas of the census of manufactures and the labor market areas of the Labor Department’s Employment and Training Administration), which were defined in different ways.

The standard metropolitan area (SMA) concept was developed in 1949 by the Bureau of the Budget (now OMB), with the advice of the newly established Federal Committee on Standard Metropolitan Areas, to overcome the above difficulties. It was designed so that a wide variety of statistical data on metropolitan areas might be presented for a uniform set of geographic areas. The SMA’s consisted of one or more contiguous counties containing at least one city of 50,000 or more inhabitants. Additional counties had to meet certain criteria of metropolitan character and of social and economic integration with the central county in order to be included in an SMA. The two major differences between the SMA and metropolitan district were (1) the SMA was not based primarily upon population density criteria, and

(2) It was defined in terms of entire counties or county equivalents (except in New England, where towns and cities have continued to make up the areas).

Changes in the official criteria have been made at the time of each census since 1950. None of these changes have involved significant deviations from the basic metropolitan concept. Several modifications have been made in the rules for determining how large a city must be to have a metropolitan area defined. Criteria changes also have been made to reflect changing national conditions. For example, the 1949 rules specified that a county must have less than 25 percent of its workers engaged in agriculture. However, with a rapidly decreasing proportion of the population engaged in farming, this requirement has been eliminated because practically no counties are still affected by it. In 1959, the designation "standard metropolitan area" was changed to "standard metropolitan statistical area" (SMSA) to emphasize the nature and purpose of the areas.

Most of the growth in officially defined metropolitan areas since 1950 has been the result of population expansion in the Nation's urban centers and their suburbs. The number of metropolitan areas (including Puerto Rico) increased from 172 in the 1950 census to 215 in 1960, 247 in 1970, and 288 as of January 1, 1980. Also during this period, many counties were added to existing metropolitan areas as a result of suburban expansion. In June 1981, as a result of the 1980 census, 36 new SMSA's were added and one SMSA was deleted, resulting in a total of 323 SMSA's. These areas remained in effect until June 1983 when 257 MSA's, 23 CMSA's, and 78 PMSA's were defined. In June 1984, 260 MSA's, 22 CMSA's, and 76 PMSA's were identified. Changes in October 1984 resulted in 261 MSA's, 21 CMSA's, and 73 PMSA's. See table A of the "Source Notes and Explanations" for the areas included in this publication.

## NEW ENGLAND COUNTY METROPOLITAN AREAS

The MSA's in the New England States are defined officially in terms of cities and towns instead of counties, as is the case with MSA's in the other States. For use in summarizing data for New England that are available only for entire counties and to provide a county version of the New England areas for comparison with areas in other parts of the country, New England county metropolitan areas (NECMA's) also are presented in table A. They do not replace the New England MSA's, which remain the standard set of areas. Definition of NECMA's follow the same criteria used to define MSA's in the other States. The title of a NECMA includes each city in the NECMA that is the first-named title city of an MSA or PMSA, in descending order of MSA/PMSA total population. Other cities that appear in MSA/PMSA titles are included (in a sequence determined by the Federal Committee on MSA's) only if the resulting NECMA title would consist of no more than three names.

## COUNTIES

In most States, the primary geographic divisions are termed "counties." As of October 1984, there were 3,139 counties in

the 50 States and the District of Columbia. Some States have areas that are classified as "county equivalents" for statistical purposes. These 133 county equivalents include 23 boroughs and census areas in Alaska; the District of Columbia; 64 parishes in Louisiana; Baltimore city, MD; St. Louis city, MO; that part of Yellowstone National Park in Montana; Carson City, NV; and 41 independent cities in Virginia.

Table A contains data for 738 metropolitan counties or county equivalents: 710 components of MSA's and 28 components of the NECMA's. Included in the 710 component areas are 47 county equivalents: Anchorage Borough, AK; the District of Columbia; 19 parishes in Louisiana; Baltimore city, MD; St. Louis city, MO; and 24 independent cities in Virginia. Table A identifies the county equivalents; all other entries are counties, but that designation is omitted.

## CITIES

The designation "city," in general, refers to a political subdivision of a State within a defined area over which a municipal corporation has been established to provide local government functions, facilities, and services. For purposes of this publication, "city" includes any area incorporated as a city, village, borough (except in Alaska and New York), or town (except in the six New England States, New York, and Wisconsin).

## URBANIZED AREAS

Urbanized areas are delineated by the Bureau of the Census according to specific criteria, designed to include the entire densely settled area around each large city. An urbanized area must have a population of at least 50,000. The urbanized area criteria define a boundary based primarily on a population density of at least 1,000 persons per square mile, but the boundary may include some less densely settled areas within corporate limits and such areas as industrial parks, railroad yards, golf courses, etc., if they are adjacent to dense urban development.

## Official Standards for Establishing MSA's

### BASIC STANDARDS

Sections 1 through 8 apply to all States except the six New England States.<sup>1</sup> (They also apply to Puerto Rico, which is not included in this publication.)

#### Section 1. Population size requirements for qualification

- A. Each MSA must include a city that, with contiguous, densely settled territory, constitutes a Census Bureau-defined urbanized area with at least 50,000 population.<sup>2</sup>

<sup>1</sup>Those provisions of sections 1 through 8 that are applicable to New England are specified in the standards relating to New England (sections 12 through 16).

<sup>2</sup>An MSA designated according to standards in effect at the time of designation is not disqualified on the basis of lacking an urbanized area of at least 50,000 population.

- B. If an MSA's largest city has less than 50,000 population, the area must have a total population of at least 100,000.<sup>3</sup>

## Section 2. Central counties

A county is designated as a central county of the MSA if—

- A. At least 50 percent of its population must live in the urbanized area that resulted in qualification under section 1A, or
- B. At least 2,500 of its population must live in a central city of the MSA.<sup>4</sup>

## Section 3. Outlying counties

- A. An outlying county is included in an MSA if any of the four following conditions is met:
- (1) At least 50 percent of the employed workers residing in the county commute to the central county or counties and the population density of the county is at least 25 persons per square mile.
  - (2) From 40 to 50 percent of the employed workers commute to the central county or counties and the population density is at least 35 persons per square mile.<sup>4</sup>
  - (3) From 25 to 40 percent of the employed workers commute to the central county or counties, the population density is at least 35 persons per square mile, and any one of the following conditions also exists:
    - (a) Population density is at least 50 persons per square mile.
    - (b) At least 35 percent of the population is urban.
    - (c) At least 10 percent, or at least 5,000, of the population lives in the urbanized area that resulted in qualification under section 1A.
  - (4) From 15 to 25 percent of the employed workers commute to the central county or counties, the population density is at least 50 persons per square mile, and any two of the following conditions also exist:<sup>5</sup>

- (a) Population density is at least 60 persons per square mile.
- (b) At least 35 percent of the population is urban.
- (c) Population growth between the last two decennial censuses is at least 20 percent.
- (d) At least 10 percent, or 5,000, of the population lives in the urbanized area that resulted in qualification under section 1A.

- B. If a county qualifies on the basis of commuting to the central county or counties of two different MSA's, it is assigned to the area to which commuting is greater, unless the relevant commuting percentages are within 5 points of each other, in which case, local opinion about the most appropriate assignment is considered.

## Section 4. Central cities

Recognized as the central city or cities of the MSA are—

- A. The city with the largest population in the MSA.
- B. Each additional city with a population of at least 250,000 or with at least 100,000 persons working within its limits.
- C. Each additional city with a population of at least 25,000, an employment/residence ratio of at least 0.75, and outcommuting of less than 60 percent of its resident employed workers.
- D. Each additional city of 15,000 to 25,000 population that is at least one-third as large as the largest central city, has an employment/residence ratio of at least 0.75, and has outcommuting of less than 60 percent of its resident employed workers.

## Section 5. Consolidating adjacent MSA's

Two adjacent MSA's defined in sections 1 through 4 are consolidated as a single MSA provided all of the following conditions are met:

- A. The commuting interchange between the two MSA's is equal to—
  - (1) At least 15 percent of the employed workers residing in the smaller MSA, or
  - (2) At least 10 percent of the employed workers residing in the smaller MSA, and
    - (a) The urbanized area of a central city of one MSA is contiguous with the urbanized area of a central city of the other MSA, or
    - (b) A central city in one MSA is included in the same urbanized area as a central city in the other MSA.
- B. At least 60 percent of the population of each MSA is urban.

<sup>3</sup>An MSA designated on the basis of census data according to standards in effect at the time of designation is not disqualified on the basis of lacking a total population of at least 100,000.

<sup>4</sup>See section 4 for the standards for identifying central cities.

<sup>5</sup>Also accepted as meeting this commuting requirement are (a) the number of persons working in the county who live in the central county or counties is equal to at least 15 percent of the number of employed workers living in the county or (b) the sum of the number of workers commuting to and from the central county or counties is equal to at least 20 percent of the number of employed workers living in the county.

- C. The total population is at least 1 million.

### Section 6. Combining adjacent MSA's

Two adjacent MSA's defined in sections 2 through 4 and not included in a consolidation by section 5 will be combined as a single MSA if—

- A. Their largest central cities are within 25 miles of each other or their urbanized areas are contiguous, and
- B. There is definite evidence that the two areas are closely integrated with each other economically and socially, and
- C. Local opinion in both areas supports the combination.

### Section 7. Levels

- A. Each MSA defined by sections 1 through 6 is categorized in one of the following levels based on total population:

Level A—MSA's of 1 million or more.

Level B—MSA's of 250,000 to 1 million.

Level C—MSA's of 100,000 to 250,000.

Level D—MSA's of less than 100,000.

- B. Areas assigned to level B, C, or D are designated as MSA's. Areas assigned to level A are not finally designated or titled until they have been reviewed under sections 9 and 10.

### Section 8. Titles of MSA's

- A. The title of an MSA assigned to level B, C, or D includes the name of the largest central city and up to two additional names:
  - (1) The name of each additional city with a population of 250,000 or more with at least 100,000 persons working within its limits.
  - (2) The names of additional cities qualified as central cities in section 4, provided each is at least one-third as large as the largest central city.
  - (3) The name of the largest city of any separate area that qualified as an MSA under sections 1 through 4 but was combined by section 6 with the area being titled.
- B. An area title that includes the names of more than one city begins with the name of the largest city and lists the other cities in order of their population according to the most recent national census.<sup>6</sup>

<sup>6</sup>If a city qualifies as a central city under section 4 and is included in an existing MSA title, it is not resequenced in or displaced from that title until both its population and the number of persons working within its limits are exceeded by those of another city qualifying for the area title.

- C. In addition to city names, the title contains the name of each State in which the MSA is located.

## STANDARDS FOR PMSA'S AND CMSA'S

Sections 9 through 11 apply to level-A MSA's outside New England.

### Section 9. Qualification as a PMSA

Within a level-A MSA—

- A. Any county or group of counties that was recognized as a separate MSA on January 1, 1980, will be recognized as a PMSA unless local opinion does not support its continued separate recognition for statistical purposes.
- B. Any additional county or group of counties for which local opinion strongly supports separate recognition will be considered for identification as a PMSA, provided a county is included that has—
  - (1) At least 100,000 population,
  - (2) At least 60 percent of its population urban, and
  - (3) Less than 50 percent of its resident workers commuting to jobs outside the county.
- C. The geographic definition of any area recognized in section 9A and the identification and definition of any area under section 9B are subject to the specific statistical guidelines detailed in the Procedures supplement to these standards. (Note: The supplement is not included in this publication; see the Federal Committee on Standard Metropolitan Statistical Areas, *The Metropolitan Area Classification*, December 1979, available from the Office of Information and Regulatory Affairs, Office of Management and Budget.)
- D. If any PMSA or PMSA's have been recognized under section 9A through C, the balance of the level-A MSA is also recognized as a PMSA.<sup>7</sup>

### Section 10. Levels and titles of PMSA's

- A. PMSA's are categorized in one of four levels according to total population, following the standards of section 7A.
- B. PMSA's are titled in either of two ways:
  - (1) Using the names of up to three cities in the PMSA that have qualified as central cities of the level-A MSA under section 4, following the standards of section 8 for selection and sequencing, or

<sup>7</sup>If section 9D would result in the balance of the level-A MSA including a noncontiguous county, this county is added to the contiguous PMSA to which it has the greatest commuting.

- (2) Using the names of up to three counties in the PMSA, sequenced in order from largest to smallest population.
- C. Local opinion on the most appropriate title will be considered.

### Section 11. Designation and titles of CMSA's

- A. Each level-A MSA in which PMSA's have been defined in section 9 is designated a CMSA. A level-A MSA in which no PMSA's have been defined is designated an MSA and is titled according to section 9.
- B. CMSA's are titled according to the following guidelines. Local opinion is always sought before determining the title of a CMSA.
  - (1) The title of each area includes up to three names, the first of which is the name of the largest central city in the area. A change in the first-named city in the title is not made until both its population and the number of persons working within its limits are exceeded by those of another city in the consolidated area.
  - (2) The preferred basis for determining the two remaining names is—
    - (a) The first city (or county) name that appears in the title of the remaining PMSA with the largest total population, and
    - (b) The first city (or county) name that appears in the title of the PMSA with the next largest total population.
  - (3) A regional designation may be substituted for the second and/or third names in the title if there is strong local support and the proposed designation is unambiguous and suitable for inclusion in a national standard.

## STANDARDS FOR NEW ENGLAND

In the six New England States, the cities and towns are administratively more important than the counties, and a wide range of data are compiled locally for these entities. Therefore, the cities and towns are the units used to define MSA's in these States. The New England standards are based primarily on population density and commuting. Sections 12 and 13 constitute the basic standards for New England MSA's. As a basis for measuring commuting, a central core is first defined for each New England urbanized area, corresponding to the central counties that are identified in the States outside New England.

### Section 12. New England central cores

A central core is determined in each New England urbanized area through the definition of two zones.

#### A. Zone A comprises—

- (1) The largest city in the urbanized area.
- (2) Each other place in the urbanized area or in a contiguous urbanized area that qualifies as a central city under section 4, provided at least 15 percent of its resident employed workers work in the largest city in the urbanized area.<sup>a</sup>
- (3) Each other city or town at least 50 percent of whose population lives in the urbanized area or a contiguous urbanized area, provided at least 15 percent of its resident employed workers work in the largest city in the urbanized area plus any additional central cities qualified by section 12A(2).<sup>a</sup>

#### B. Zone B comprises each city or town that—

- (1) Has at least 50 percent of its population living in the urbanized area or in a contiguous urbanized area, and
- (2) Has at least 15 percent of its resident employed workers working in zone A.<sup>a</sup>

#### C. The central core comprises zone A, zone B, and any city or town that is physically surrounded by zone A or B, except that cities or towns that are not contiguous with the main portion of the central core are not included.

#### D. If a city or town qualifies under section 12A through C for more than one central core, it is assigned to the core to which commuting is greatest unless the relevant commuting percentages are within 5 points of each other, in which case local opinion as to the most appropriate assignment will also be considered.

### Section 13. Outlying cities and towns

#### A. A city or town contiguous to a central core as defined by section 12 is included in its MSA if—

- (1) It has a population density of at least 60 persons per square mile and at least 30 percent of its resident employed workers work in the central core, or

<sup>a</sup>Also accepted as meeting this commuting requirement are (a) the number of persons working in the subject city or town who live in the specified city or area is equal to at least 15 percent of the employed workers living in the subject city or town or (b) the sum of the number of workers commuting to and from the specified city or area is equal to at least 20 percent of the employed workers living in the subject city or town.

- (2) It has a population density of at least 100 persons per square mile and at least 15 percent of the employed workers living in the city or town work in the central core.<sup>9</sup>
- B. If a city or town has the qualifying amount of commuting to two different central cores, it is assigned to the MSA to which commuting is greater, unless the relevant commuting percentages are within 5 points of each other, in which case, local opinion as to the most appropriate assignment will also be considered.
- C. If a city or town has the qualifying level of commuting to a central core but has greater commuting to a nonmetropolitan city or town, it will not be assigned to any MSA unless the relevant commuting percentages are within 5 points of each other, in which case local opinion as to the most appropriate assignment will also be considered.

#### **Section 14. Applicability of basic standards to New England MSA's**

- A. An area defined by sections 12 and 13 qualifies as an MSA provided it contains a city of at least 50,000 population or has a total population of at least 75,000.<sup>10</sup>
- B. The area's central cities are determined according to the standards of section 4.
- C. Two adjacent New England MSA's are consolidated as a single MSA provided the conditions of section 5 are met. Section 6 is not applied in New England.
- D. Each New England MSA defined by section 14A through C is categorized in one of the four levels specified in section 7A. Areas assigned to level B, C, or D are designated as MSA's. Areas assigned to level A are not finally designated until they have been reviewed under sections 15 and 16.
- E. New England MSA's are titled according to the standards of section 8.

#### **Section 15. Qualification as a PMSA**

Within a level-A MSA in New England—

<sup>9</sup>Also accepted as meeting this commuting requirement are (a) the number of persons working in the city or town who live in the central core is equal to at least 15 percent of the employed workers living in the city or town, or (b) the sum of the number of workers commuting to and from the central core is equal to at least 20 percent of the employed workers living in the city or town.

<sup>10</sup>A New England MSA designated on the basis of census data according to standards in effect at the time of designation is not disqualified on the basis of lacking a total population of at least 75,000.

- A. Any group of cities and towns that was recognized as a separate MSA on January 1, 1980, will be recognized as a PMSA, unless local opinion does not support its continued separate recognition for statistical purposes.
- B. Any additional group of cities and/or towns for which local opinion strongly supports separate recognition will be considered for identification as a PMSA, provided—
  - (1) The total population of the group is at least 75,000;
  - (2) It includes at least one city with a population of 15,000 or more, an employment/residence ratio of at least 0.75, and outcommuting of less than 60 percent of its resident employed workers; and
  - (3) It contains a core of communities, each of which has at least 50 percent of its population living in the urbanized area and which together have less than 40 percent of their resident workers commuting to jobs outside the core.
- C. The geographic definition of any area recognized by section 15A and the identification and definition of any area under section 15B are subject to the specific statistical guidelines detailed in the Procedures supplement to these standards. (Note: For details, see sources cited under section 9C.)
- D. If any PMSA or PMSA's have been recognized under section 15A through C, the balance of the level-A MSA will also be recognized as a PMSA.<sup>11</sup>

#### **Section 16. Levels and titles of New England PMSA's**

- A. New England PMSA's are categorized in one of four levels according to total population, following section 7A.
- B. New England PMSA's are titled using the names of up to three cities in the primary area that have qualified as central cities under section 4, following the standards of section 8 for selection and sequencing.
- C. Each level-A MSA in New England in which PMSA's have been defined by section 15 is designated a CMSA. Titles of New England CMSA's are determined following the standards of section 11. A level-A MSA in which no PMSA's have been defined is designated an MSA and is titled according to the standards of section 8.

<sup>11</sup>If section 15D would result in the balance of the level-A MSA including a noncontiguous city or town, this place is added to the contiguous PMSA to which it has the greatest commuting.

# SOURCE NOTES AND EXPLANATIONS

## Table A—Metropolitan Areas and Components

Data are presented in table A for 243 metropolitan statistical areas (MSA's), 17 consolidated metropolitan statistical areas (CMSA's), 54 primary metropolitan statistical areas (PMSA's), and 16 New England county metropolitan areas (NECMA's). The 14 MSA's, 3 CMSA's, and 17 PMSA's in New England and the 4 MSA's, 1 CMSA, and 2 PMSA's in Puerto Rico are not included. All areas are defined as of October 12, 1984. Three new MSA's were defined in June 1985: Cheyenne, WY; Jackson, TN; and Rapid City, SD. They are not included in this publication.

The left-hand column of each page provides an alphabetical listing by State of the MSA's, CMSA's, and NECMA's with their component PMSA's and/or counties. Numbered data items are presented across the top of each page, running from item 1 to item 298. All 298 items of data are provided in 20 pages for each of the 18 sets of metropolitan areas before the listing is continued.

For each item, totals for the entire United States, each State, and the metropolitan and nonmetropolitan portions of each State are presented.

Federal standardized code numbers for MSA's, CMSA's, PMSA's, NECMA's, and counties (with corresponding State codes) are shown in the first two columns on each first page of items. These codes are given to facilitate cross-reference with other publications such as the *County and City Data Book* and to provide necessary information for access to, and interchange of, data available on computer tape. See "Geographic Concepts and Codes" for more details.

Certain of the data presented may not correspond with data found in the original sources due to changes in MSA and other geographic area definitions over time (see appendix 1). All summaries, including historical data, are presented for the areas as currently defined, i.e., the original figures have been retabulated to reflect the status of metropolitan area boundaries on October 12, 1984.

## AREA AND POPULATION

### Item A1. Land area, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC80-1-A).

Land area measurements are shown to the nearest tenth of a square mile. Land area includes dry land and land temporarily or partially covered by water, such as marshland, swamps, and

river floodplains. In addition, it generally includes streams, sloughs, estuaries, and canals less than one-eighth of a statute mile in width, and lakes, reservoirs, and ponds less than 40 acres in area; for Alaska, the corresponding values are one-half mile and 640 acres. To determine land area in square kilometers, multiply by 2.59.

### Items A2-32. General note.

**Decennial censuses.**—The population statistics for 1960, 1970, and 1980 are based on results from the censuses of population and housing, conducted by the Bureau of the Census as of April 1 in each of those years. As provided by article 1, section 2, of the U.S. Constitution, adopted in 1787, a census has been taken every 10 years commencing with 1790. The original purposes of the census were to apportion the seats in the U.S. House of Representatives based on the population of each State and to derive an equitable tax on each State for the payment of the Revolutionary War debt. Through the years, the Nation's needs and interests have become more complex, and the content of the decennial census has changed accordingly. Presently, census data not only are used to apportion seats in the House and to aid legislators in the realignment of legislative district boundaries but also are used in the distribution of billions of Federal dollars each year and are vital to State and local governments and to private firms for such functions as market analysis, site selection, and environmental impact studies.

Data presented in this publication from the 1960, 1970, and 1980 decennial censuses are based on tabulations of 100-percent, or complete counts (i.e., information obtained for all persons and housing units), and sample estimates (i.e., additional information asked of a sample of persons). In most cases, the sources used for the data shown here are machine-readable computer files or tapes. Data from the 1980 Census of Population and Housing were released in three types of data products—computer tapes, printed reports, and microfiche. The Census Bureau released most summary data on tapes in a series of public-use "files" called summary tape files (STF). Most STF's have two or more parts (designated by letters, i.e., "A," "B," etc.) that differ in the types of geographic areas for which data are reported. Items from the 1980 census presented in this publication were excerpted from STF 1A, STF 1C, STF 3A, and STF 3C and are so identified in the source notes. STF 1 contains complete-count data such as age, sex, and household type; STF 3 contains sample data such as migration, education, labor force, income, and house heating fuel.

Much of the data found on STF's were also released in printed reports or on microfiche. The population and housing items shown in this publication also appear in the *1980 Census of Population, Characteristics of the Population* (series PC80-1), and the *1980 Census of Housing, Characteristics of Housing Units* (series HC80-1). Each of these volumes is subdivided into "chapters" issued as separate reports. *Number of Inhabitants* (series PC80-1-A) and *General Population Characteristics* (series PC80-1-B) present population data collected on a 100-percent basis. *General Social and Economic Characteristics* (series PC80-1-C) and *Detailed Population Characteristics* (series PC80-1-D) present data collected on a sample basis. In the two housing "chapters," *General Housing Characteristics* (series HC80-1-A) presents data on a 100-percent basis, and *Detailed Housing Characteristics* (series HC80-1-B) presents data on a sample basis.

For the 1980 census, two sampling rates were employed. For most of the country, one in every six households (about 17 percent) received the "long form" or sample questionnaire; in counties, incorporated places, and minor civil divisions estimated to have fewer than 2,500 inhabitants, every other household (50 percent) received the sample questionnaire to increase the reliability of sample data in small areas. Exact agreement is not expected between data based on samples and data resulting from complete counts. Sample estimates may be used with confidence where large numbers are involved and are assumed to indicate patterns, trends, and relationships where small numbers are involved. Standard errors for the sample estimates can be determined by using information in the appendixes to the PC80-1-C and HC80-1-B reports listed above.

Persons enumerated in the census were counted as inhabitants of their usual place of residence, which generally means the place where a person lives and sleeps most of the time. This place is not necessarily the same as the legal residence, voting residence, or domicile. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although appreciable differences may exist for a few areas.

The implementation of this usual-residence practice has resulted in the establishment of residence rules for certain categories of persons whose usual place of residence is not immediately apparent (e.g., college students were counted at their college residence). As in the above example, persons were not always counted as residents of the place where they happened to be staying on census day. However, persons without a usual place of residence were counted where they were enumerated.

For detailed discussions of the background, purposes, planning, and procedures used for the 1980 Census of Population and Housing, as well as a facsimile of the questionnaires, and descriptions of the data products resulting from the census (including printed reports, summary tape files, and microfiche), see U.S. Bureau of the Census *1980 Census of Population and Housing: Users' Guide* (series PHC80-R1).

**Population estimates.**—Data are also presented in this publication for the years between decennial censuses. For those years,

the Bureau of the Census has prepared special intercensal population estimates based on complete-count data from both the corrected 1970 and the 1980 Censuses of Population.

The estimates used as a base for data in this publication and the annual changes implied by the figures are subject to estimation error. Variations from actual population levels are inherent in the estimating procedures, stemming from the fact that the correlation between the data series and population is not perfect. The data series being used to reflect population change are all affected to some degree by factors other than population movements and, in addition, are part of reporting systems that are subject to administrative alteration. A detailed discussion of the basic methodology and data series used in developing the estimates and an evaluation of the accuracy of the estimates are contained in *Current Population Reports*, series P-26.

**Boundary changes.**—The boundaries of some areas changed between January 1, 1970, and January 1, 1980. The historic counts shown for counties have been adjusted for such changes where possible.

#### **Items A2-32. Population—selected characteristics, selected years, 1970-1984.**

Source: U.S. Bureau of the Census, items A2-5 and A9: *Current Population Reports*, series P-26, Nos. 84-1-SC through 84-50-SC; items A6, A10, A12-23, and A32: *1980 Census of Population and Housing*, Summary Tape File 1C; items A7, A8, and A11: *1960 and 1970 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC60-1-A and PC70-1-A); and items A24-31: *1980 Census of Population and Housing*, Summary Tape File 3C.

For 1984, the count of total persons (item A2) is based on provisional estimates of the resident population as of July 1; for 1960, 1970, and 1980, the count (items A6-8) is based on resident population enumerated as of April 1.

Rank numbers (item A3) are assigned on the basis of population size, with each area placed in descending order, largest to smallest. Where ties occur—two or more areas with identical populations—the same rank is assigned to each of the tied areas. In such cases, the following rank number is omitted so that the lowest rank is usually equal to the number of areas ranked. The 275 areas ranked include the 17 CMSA's, 243 MSA's, and 15 of the 16 NECMA's. The Bridgeport-Stamford-Norwalk-Danbury, CT NECMA is not ranked, as it is used as a PMSA substitute in the New York-Northern New Jersey-Long Island, NY-NJ-CT CMSA.

Population per square mile (item A4) is the average number of inhabitants per square mile of land area. These figures are derived by dividing the total number of residents by the number of square miles of land area in the specified geographic area. To determine population per square kilometer, multiply the population per square mile by .3861.

Statistics for percent of metropolitan area (item A5) represent the percent of persons residing in the metropolitan area of a CMSA or MSA.

Percent change (items A9-11) represents simple percent change between the 2 years shown.

Population by race (items A12 and A13), as defined by the Census Bureau, reflects self-identification by respondents; it does not denote any clear-cut scientific definition of biological stock. In the 1980 census, data were obtained through self-classification. For persons who could not provide a single response to the race question, the race of the person's mother was used. However, if a single response could not be provided for the person's mother, the first race reported by the person was used. The White population (item A12) is defined as persons who indicated their race as White, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but entered a nationality such as Canadian, German, Italian, Lebanese, or Polish. The Black population (item A13) includes persons who indicated their race as Black or Negro, as well as persons who did not classify themselves in one of the specific race categories but reported entries such as Black Puerto Rican, Haitian, Jamaican, Nigerian, or West Indian.

The Spanish-origin population (item A14) is based on a complete-count question that asked respondents to identify whether they were of Spanish origin or descent. Persons marking any one of the four Spanish categories (i.e., Mexican, Puerto Rican, Cuban, or other Spanish) are collectively referred to as "persons of Spanish origin." If, when interviewed, the person reported a multiple origin and could not provide a single origin, the origin of the person's mother was used. If a single response was not provided for the person's mother, the first reported origin of the person was used. Spanish origin is not a race category, and persons of Spanish origin may be of any race.

The quotients for the ratio of males per 100 females (item A15) were derived by dividing the total number of males in a given geographic area by the number of females in that area and multiplying the results by 100.

Age (items A16-23) is classified as age at last birthday (i.e., number of completed years from birth to April 1) and is based on replies to a question on month and year of birth. The percent figures were derived by dividing the sum of persons in a specified age group by the total population of a given geographic area. Data on age are based on complete counts.

Data for movers, 1975-1980 (items A24-27), are based on a sample of persons 5 years old and over and represent the percent of the population that lived in a different house or apartment on April 1, 1975, than on April 1, 1980. Residence in 1975 is used in conjunction with residence in 1980 to measure the residential mobility of the population. Statistics are shown for persons who lived in a different house in the same county in 1975, in a different county in the same State, in a different State, and abroad (includes persons in the Armed Forces overseas, as well as civilians living outside the United States in 1975).

Data for persons born outside of State of residence (items A28 and A29) represent the percent of persons who were born outside of the State in which they were living on April 1, 1980. Place of birth data are estimates based on the sample.

Data for persons speaking a language other than English at home (item A30) are based on a sample of persons 5 years old and over. The questions on language spoken at home were intended to measure the extent to which languages other than

English were currently being spoken and were not intended to determine which language was a person's main language or whether a person was fluent in the non-English language that he or she reported.

Data for veterans (item A31) cover persons who had served on active duty but were not serving on active duty in the Armed Forces of the United States in the reference week for the 1980 census. All civilians 16 years old and over are classified on the basis of whether they have served on active duty in the Armed Forces, regardless of whether their service was in war or peacetime. Women are also included. The question was asked on a sample basis.

Data for the population living in group quarters (item A32) include all persons not living in households. Group quarters include living arrangements such as prisons, homes for the aged, rooming houses, college dormitories, and military barracks.

See also the general note for items A2-32.

## HOUSEHOLDS

### Items A33-40. Households—selected characteristics, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing*, Summary Tape File 1C.

Data for number of households (item A33) include all persons occupying housing units. A housing unit is a house, an apartment, a group of rooms, or a single room occupied as separate living quarters or, if vacant, intended for occupancy as separate living quarters. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living quarters, except as described in the definition of persons in group quarters (see item A32). The number of households is the same as the number of year-round occupied housing units (see item A144).

Persons per household (item A35) represent the number of persons in households divided by the number of households (or householders).

Percent with persons 65 years old and over (item A36) represents all households with persons 65 years old and over living in them divided by total households.

A one-person household (item A37) consists of one person living alone.

A family household (items A38-40) consists of two or more persons, including the householder, who are related by birth, marriage, or adoption and who live together as one household; all such persons are considered as members of one family. A married-couple family (item A39) is one in which the householder and his or her spouse are enumerated as members of the same household.

## VITAL STATISTICS

### Items A41-44. Marriages and divorces—number and rate, 1982.

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. III, *Marriage and Divorce*, 1982.

Marriage and divorce statistics are based on complete counts of events obtained from the registration offices of all States, New York City, and the District of Columbia.

State and local officials annually provide complete counts of marriages and divorces by county of occurrence and marriages by month of occurrence. From these counts, marriage and divorce totals are derived and rates computed for each MSA and component counties, State, geographic division, region, and the United States as a whole.

Marriage and divorce statistics are limited to events occurring in the specified area during the year and include events occurring to nonresidents of the United States. Marriages or divorces that occur outside the United States are excluded. Annulments are included in the divorce statistics.

The marriage and divorce rates are based on population estimates as of July 1, 1982. For a discussion of population estimates, see the general note for items A2-32.

**Items A45-67. Births and deaths—number and rate, 1970, 1975, 1980, and 1982; and percent Black births, births to mothers under 20 years old, infant deaths, causes of death, and fetal deaths, 1982.**

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. I, *Nativity*, and Vol. II, *Mortality*, annual.

Through the National Vital Statistics System, the National Center for Health Statistics (NCHS) collects and publishes data on births and deaths in the United States. Fetal deaths are classified and tabulated separately from other deaths. The Division of Vital Statistics obtains information on births and deaths from the registration offices of all States, New York City, and the District of Columbia.

In most areas, practically all births and deaths are registered. The most recent test of the completeness of birth registration, conducted on a sample of births from 1964 to 1968, showed that 99.3 percent of all births in the United States during that period were registered. No comparable information is available for deaths, but it is generally believed that death registration in the United States is at least as complete as birth registration.

Birth and death statistics are limited to events occurring during the year. The data are by place of residence and exclude events occurring to nonresidents of the United States. Births or deaths that occur outside the United States are excluded.

Birth and death rates (items A51-54 and A60-67) represent the number of births and deaths per 1,000 resident population enumerated as of April 1 for 1970 and 1980 (decennial census years) and estimated as of July 1 for 1975 and 1982.

Figures for infant deaths (item A61) include deaths of children under 1 year of age; they exclude fetal deaths.

For discussions of the decennial censuses and estimates of the population between censuses, see the general note for items A2-32.

## HEALTH

**Items A68-73. Physicians, active, non-Federal—number and rate, 1970 and 1982; and office-based practice, 1982.**

Source: American Medical Association (AMA), *Distribution of Physicians, 1970*, and *Physician Distribution and Medical Licensure in the United States, 1983*. (Copyright.)

The number of physicians (items A68 and A69) represents the distribution of non-Federal physicians with known addresses who are professionally active in the United States. The figures are based on information contained in the *AMA Physician Masterfile*. The file has been maintained by the AMA since 1906 and includes information on every physician in the country and on those graduates of American medical schools who are temporarily practicing overseas. The file also includes members and nonmembers of the AMA and graduates of foreign medical schools who are in the United States and meet U.S. education standards for primary recognition as physicians. Thus, all physicians comprising the total manpower pool are included on the file. However, this publication excludes data for Federal physicians, non-Federal physicians who are temporarily in foreign locations, and (in table A) physicians not classified by type of professional activity.

Masterfile data are obtained from both AMA surveys and inputs from physicians, other organizations, and institutions. Primary sources are as follows: Medical schools, hospitals, medical societies, national boards, State licensing agencies, Educational Commission for Foreign Medical Graduates, Surgeon General of the U.S. Government, American Board of Medical Specialties, and physicians. The file utilizes data from primary sources only. For details, see the source.

Data for office-based practice (items A72 and A73) cover all physicians rendering patient care (or patient services by pathologists) in solo, partnership, group practice, or other arrangements, and those in industry, insurance companies, health departments, laboratories, etc.

Alaska is divided into four judicial divisions; therefore, data are not available for Alaska in the form presented in this publication.

**Items A74-76. Nursing homes—number, beds, and residents, 1982.**

Source: U.S. National Center for Health Statistics, unpublished data.

These items cover nursing homes as defined in the National Master Facility Inventory (NMFI), a comprehensive file of inpatient health facilities in the United States. The three broad categories of facilities in NMFI are hospitals, nursing and related care homes, and other custodial or remedial care facilities. To be included in NMFI, nursing and related care homes must have at least three inpatient beds. The minimum standards and regulations for nursing homes vary among the States so that no uniform definition is possible. Residential community care facilities in California, adult foster care homes in Michigan, adult congregate living facilities in Florida, and family care homes in Kentucky are not included in this publication.

NMFI is kept current by the periodic addition of names and addresses obtained from State licensing agencies and other organizations for all newly established inpatient facilities. In addition, periodic surveys of nursing homes and other facilities are

conducted to update name and location, type of business, number of beds, and number of residents or patients in the facilities.

Statistics derived from the surveys were adjusted for both facility and item nonresponse. Missing items on the questionnaire were imputed, when possible, by using information reported by the same facility in a previous survey. When data were not available from a previous census for a responding facility, the data were imputed by using data from similar responding facilities. Similar facilities are defined as those with the same types of business, ownership, service, and approximate bed size.

#### **Items A77-81. Hospitals—number and beds, 1983.**

Source: American Hospital Association (AHA), *Hospital Statistics, 1983*. (Copyright.)

These statistics were compiled by the AHA from surveys of all hospitals in the United States and its outlying areas. They include unregistered hospitals, as well as those registered by the AHA. Hospitals were asked to report data for a full year ending September 30.

A hospital (item A77) is defined as a facility with at least six beds that is licensed by the State as a hospital or that is operated as a hospital by a Federal or State agency and is therefore not subject to State or local licensing laws. The data cover hospitals of all types and are fairly complete for general, tuberculosis, mental, and Federal Government hospitals. Institutions and services commonly referred to as convalescent and resting homes, nursing homes, infirmaries, old-age homes, and sanatoriums are excluded almost entirely.

Short-term hospitals (item A78) have an average patient stay of less than 30 days or admit more than 50 percent of all patients to units where the average length of stay is less than 30 days.

Hospital beds (items A79-81) comprise beds, cribs, and pediatric bassinets regularly maintained (set up and staffed for use) for inpatients during the 12-month period. They exclude newborn infant bassinets.

### **HEALTH INSURANCE (MEDICARE)**

#### **Items A82-89. Hospital insurance and supplementary medical insurance— persons enrolled and benefit payments, 1970 and 1982.**

Source: U.S. Health Care Financing Administration (for 1970, the Social Security Administration), *Medicare: Health Insurance for Aged; Amount Reimbursed by State and County, 1970*; and *Medicare Health Insurance for Aged and Disabled, 1982, Reimbursement by State and County*.

The Medicare program, enacted on July 30, 1965, became effective on July 1, 1966. Effective July 1, 1973, Medicare coverage was extended to disabled beneficiaries under the Social Security or Railroad Retirement Program and to persons under 65 years

old who require dialysis or kidney transplant for end-stage renal disease.

Medicare makes available two separate but complementary insurance programs: (a) Hospital insurance, covering nearly all persons 65 years old and over, disabled beneficiaries under 65 entitled to benefits for at least 24 consecutive months, and covered workers or their dependents with end-stage renal disease who require renal dialysis or a kidney transplant; and (b) supplementary medical insurance, covering those persons entitled to hospital insurance or who have attained age 65 and are U.S. residents who voluntarily pay the premiums or have the premiums paid on their behalf. Beginning July 1973, most persons 65 years old and over otherwise ineligible for hospital insurance may enroll voluntarily and pay the premiums for hospital coverage if they are enrolled for supplementary medical insurance.

The number of persons enrolled represents those persons enrolled for coverage in each program as of July 1, 1970 and 1982, the midpoint of the calendar year, as shown by information entered in social security records through March 1971 and 1983, respectively.

Benefit payments shown are interim amounts reimbursed that represent amounts paid in a calendar year to, or on behalf of, insured persons. Included in the figures presented for the given years are payments representing bills paid in earlier years but received too late to be included in reports covering those years. The amounts for 1970 are based on information from bills entered in Social Security Administration records through early August 1971. The 1982 data represent bills recorded by the U.S. Health Care Financing Administration through June 1983.

The hospital insurance program (items A82-85) pays for covered hospital services, including room and board, nursing services (except for private duty nursing), drugs and biologicals, and other services ordinarily furnished by a hospital to its patients. It also covers related health care services provided by skilled nursing facilities (formerly termed extended-care facilities) and by approved home health agencies.

The supplementary medical insurance program (items A86-89) provides coverage for a variety of medical services and supplies furnished by physicians or others in connection with physicians' services. Included in this category are such services as visits to the home, office, hospital, and other institutions. Also included are other services and supplies, such as drugs and biologicals that cannot be self-administered, if they are furnished as a part of a physician's professional service; diagnostic tests, X-rays, radium and radioactive isotope therapy; splints, casts, and other devices used for reduction of fractures and dislocations; purchase or rental of durable medical equipment; ambulance service; and prosthetic devices that replace all or part of an internal organ. Also provided are miscellaneous services, including home health visits provided by a certified home health agency in accordance with a home health plan established by the patient's physician, hospital services incident to physicians' services rendered to outpatients, outpatient speech and physical therapy services, services of a physical therapist in independent practice furnished in his or her office or the patient's home, and some services of a licensed chiropractor are covered.

## SOCIAL SECURITY

**Items A90-102. Social Security benefits (December)— recipients, 1970, 1980, and 1982; and payments, 1980 and 1982.**

Source: U.S. Social Security Administration, *Social Security Beneficiaries by State and County, December 1982*, and unpublished data.

The old-age, survivors, and disability insurance program (OASDI) provides monthly benefits for retired and disabled workers and their dependents and to survivors of insured workers. To be eligible for benefits, a worker must have had a specified period of employment in which OASDI taxes were paid. A worker becomes eligible for full retirement benefits at age 65, although reduced benefits may be obtained up to 3 years earlier. Survivor benefits are payable to dependents of deceased insured workers. Disability benefits are payable to an insured worker under age 65 with a prolonged disability and to that person's dependents on the same basis as dependents of a retired worker. Also, disability benefits are payable at age 50 to the disabled widow or widower of a deceased worker who was fully insured at the time of death. A lump-sum benefit is also payable on the death of an insured worker. Data for total recipients and retired workers include persons with special age-72 benefits. Special age-72 benefit represents the monthly benefit payable to men who attained age 72 before 1972 and for women who attained age 72 before 1970 and who do not have sufficient quarters to qualify for a retired-worker benefit under either the fully or the transitionally insured status provision.

Disability is the inability to engage in a gainful activity by reason of any medically determinable physical or mental impairment that can be expected to result in death or to last for a continuous period of not less than 12 months. Except in cases involving second and subsequent disabilities, the law requires that a person be disabled continuously for 5 months before he or she can qualify for a "period of disability" or a disabled worker benefit.

Total figures in each year shown represent the number of, or payments to, insured, retired, or disabled workers; the spouses, dependents, and survivors of insured persons; and those persons in the special age-72 category.

Payments for month (items A97 and A98) represent the amount paid out to beneficiaries during the month of December in both years shown. Payments for year (items A101 and A102) cover all OASDI payments for both years and include lump-sum benefits.

Data for Anchorage, Alaska, are imprecise since the boundaries of the "economic areas" used by the Social Security Administration are not identical to the boundaries of the boroughs/census areas presented in this publication.

## SUPPLEMENTAL SECURITY INCOME

**Items A103-108. Supplemental Security Income Program (June)— recipients, payments for month, and average monthly payments, 1980 and 1984.**

Source: U.S. Social Security Administration, *Supplemental Security Income, State and County Data, June 1980*, and unpublished data.

Under the direction of the Social Security Administration, the Supplemental Security Income (SSI) program provides cash payments in accordance with nationwide eligibility requirements to persons with limited income and resources who are aged, blind, or disabled. Under the SSI program, each person living in his or her own household is provided a cash payment from the Federal Government that is sufficient, when added to the person's countable income (the total gross money income of an individual less certain exclusions), to bring the total monthly income up to a specified level (the Federal benefit rate). If the individual or couple is living in another household, the guaranteed level is reduced by one-third.

An aged person is defined as an individual who is 65 years old or over. A blind person is anyone with vision of 20/200 or less with the use of correcting lens in the better eye or with tunnel vision of 20 degrees or less. The disabled classification refers to any person unable to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment expected to result in death or that has lasted or can be expected to last for a continuous period of at least 12 months. For a child under age 18, eligibility is based on disability or severity comparable with that of an adult, since the criterion of "substantial gainful activity" is inapplicable for children.

The data cover persons with Federal SSI payments and/or federally administered State supplementation. States have the option to supplement the Federal SSI payment for all or selected categories of recipients. The data are for persons with Federal SSI payments only for the following States: Alabama, Alaska, Arizona, Colorado, Connecticut, Idaho, Illinois, Indiana, Kentucky, Minnesota, Missouri, Nebraska, New Hampshire, New Mexico, North Carolina, North Dakota, Oklahoma, Oregon, South Carolina, Utah, Virginia, West Virginia (1980 only), and Wyoming; these States have State-administered supplementation. Data for Texas and West Virginia (1984 only) cover Federal SSI payments only; no State supplementary payments are made.

County data on Supplemental Security Income Program outlays and number of recipients are collected by the Social Security Administration and are only published for December. This table presents data on the county distribution of federally administered payments to the individuals and couples receiving supplemental security income in June of each year.

A special procedure (controlled random rounding) was used by the Social Security Administration to avoid disclosure of reason for eligibility of particular individuals and the amount of benefits received. Under this procedure, county data on the number of persons were changed as follows: (1) Odd numbers were rounded either to the next higher or to the next lower even number in such a way that the probability of rounding up or the probability of rounding down is the same; (2) even numbers were not changed. Subsequent to the rounding of numbers, the dollar amounts were proportionately adjusted, upwards or downwards as appropriate.

Data on monthly payments exclude payment data for persons with recent adult unit classification changes or with inconsistent county designations. The average monthly payments are derived by dividing the total payments for the month by the total number of recipients.

## PUBLIC ASSISTANCE

**Items A109-116. Aid to Families with Dependent Children (AFDC) Program (February)—recipients, 1980 and 1982-1984; and families and children, 1980 and 1984.**

Source: U.S. Social Security Administration, *Public Assistance Recipients and Cash Payments, by State and County*, annual.

In general, AFDC provides for Federal grants to help defray State costs of providing financial assistance to needy children who are under age 18 (or under age 21 and attending school); living in the home of a parent or other relative; and deprived of parental support or care because of the death, continued absence from the home, or physical or mental incapacity of a parent—or if a State elects, the unemployment of a father.

Two-thirds of the States have other eligibility requirements. Each State decides what "need" is and to what extent it will be willing and able to meet that need. Recipients include children and parents or caretakers in families where the needs of adults were also considered in determining the amount of aid.

As of 1981, county data are available only for metropolitan areas.

## JOURNEY TO WORK

**Items A117-121. Employment/resident ratio, persons working outside county of residence, and means of transportation to work, 1980.**

Source: U.S. Bureau of the Census, item A117: Unpublished data; items A118-121: *1980 Census of Population and Housing*, Summary Tape File 3C.

Data presented for journey to work in 1980 were obtained from a sample of the population as part of the 1980 Census of Population and Housing, conducted by the Bureau of the Census. The figures cover workers 16 years old and over. For a discussion of the decennial censuses, see the general note for items A2-32.

The employment/resident ratio (item A117) represents the number of workers working in the county divided by the number of workers residing in the county whose place of work was reported. Ratios greater than 1.00 result from net incommuting; those less than 1.00 result from net outcommuting.

The percent of workers working outside the county of residence (item A118) represents the number of workers whose place of work was outside the county as a percentage of the number of workers residing in the county whose place of work was reported.

Transportation to work (items A119-121) refers to the principal means of travel or type of conveyance usually used during the

given reference week in traveling from home to work at the address in the place-of-work question; reference week refers to the calendar week prior to the date on which respondents completed their census questionnaires or were interviewed by enumerators. If more than one means of transportation was used, the respondent was instructed to report the one usually used for most of the distance. Major categories of means of transportation include car, truck, or van (either drive alone or carpool); public transportation; miscellaneous other means (motorcycle, bicycle, walked only); and worked at home, not shown separately. Drive alone data (item A119) include persons who usually drove alone, as well as persons who were driven to work by someone who then drove back home or to a nonwork destination. Carpool (item A120) refers to persons who shared driving (e.g., persons in carpools who took turns in driving on different days), drove others only, or rode as a passenger only (includes persons who were usually driven to work by another worker, not necessarily someone who worked at the same place as the respondent). Public transportation (item A121) includes buses or streetcars, railroads (including commuter trains), subway or elevated trains (rapid transportation operating on its own right-of-way underground, on the surface, or elevated), and taxicabs.

## CRIME

**Items A122-129. Serious crimes known to police—number and rate, 1980, 1982, and 1983.**

Source: U.S. Federal Bureau of Investigation, unpublished data.

Through the voluntary contribution of crime statistics by law enforcement agencies across the United States, the Uniform Crime Reporting (UCR) Program provides periodic assessments of crime in the Nation as measured by offenses coming to the attention of the law enforcement community. The Committee on Uniform Crime Records of the International Association of Chiefs of Police initiated this voluntary national data-collection effort in 1930. UCR Program contributors compile and submit their crime data in one of two means: Either directly to the FBI or through the State UCR Programs.

Seven offenses, because of their seriousness, frequency of occurrence, and likelihood of being reported to police, were initially selected to serve as an index for evaluating fluctuations in the volume of crime. These crimes, known as the Crime Index offenses, were murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny-theft, and motor vehicle theft. By congressional mandate, arson was added as the eighth Index offense in 1979. Local totals shown do not include arson.

Rates (items A123, A127, and A129) are based on resident population enumerated as of April 1, 1980, and estimated as of July 1 for other years shown.

Property offenses (item A124) include three crime categories: (1) Burglary is the unlawful entry of a structure to commit a felony or theft. (2) Larceny-theft is the unlawful taking, carrying, leading, or riding away of property from the possession or

constructive possession of another. It includes crimes such as shoplifting, pocket picking, purse snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, etc., in which no use of force, violence, or fraud occurs. This crime category does not include embezzlement, "con" games, forgery, worthless checks, and motor vehicle theft. (3) Motor vehicle theft is the theft or attempted theft of a motor vehicle. This definition excludes the taking of a motor vehicle for temporary use by those persons having lawful access.

Violent offenses (item A125) include four crime categories: (1) Murder and nonnegligent manslaughter, as defined in the UCR Program, is the willful (nonnegligent) killing of one human being by another. This offense excludes deaths caused by negligence, suicide, or accident; justifiable homicides; and attempts to murder or assaults to murder. (2) Forcible rape is the carnal knowledge of a female forcibly and against her will. Assaults or attempts to commit rape by force or threat of force are also included; however, statutory rape (without force) and other sex offenses are excluded. (3) Robbery is the taking or attempting to take anything of value from the care, custody, or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear. (4) Aggravated assault is an unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault is usually accompanied by the use of a weapon or by means likely to produce death or great bodily harm. Attempts are included since an injury does not necessarily have to result when a gun, knife, or other weapon is used, which could and probably would result in a serious personal injury if the crime were successfully completed.

## HOUSING

### Items A130-135. New private housing units authorized by building permits, 1983 and 1984.

Source: U.S. Bureau of the Census, *Housing Units Authorized by Permits and Public Contracts, 1983 and 1984*, series C40; and unpublished data.

These figures represent private housing units authorized by building permits in approximately 16,000 places in the United States that were identified as having local building permit systems since 1972. For a definition of housing unit, see the text for items A136-151.

This 16,000-place universe accounts for a major portion of all new residential housing units started in the United States. In 1983 and 1984, nearly 90 percent of all new private housing was constructed within permit-issuing places. Hotels, motels, and other group residential structures such as nursing homes and college dormitories are excluded. For definitions and coverage of the data, see the source.

The data-cell entry for a number of counties with no known permit-issuing places or with permit-issuing places not included in the 16,000-place universe is X. Counties with permit-issuing places that issued no permits during the period are represented by a dash (-). For some counties, 10 percent or more of the annual

total has been imputed for nonresponse and, therefore, has been suppressed (an S in the data cell). U.S. and metropolitan totals include data for the suppressed cells. For an explanation of other symbols, see "Introduction."

The percent figures are calculations derived by dividing the number of new private one-unit structures or the sum of the housing units in structures of five or more units by the total of all newly authorized units during the period. A one-unit structure is a separate building that either has open space on all four sides (detached) or, in the case of semidetached, row, and town houses, is separated from its neighbor by a wall that extends from ground to roof. Also, there are no common heating systems or interstructural public utilities such as water supply/sewage disposal. This category also includes buildings containing one housekeeping unit in combination with space for business or professional purposes, provided the buildings are primarily for residential use. In five-unit structures, each building contains five or more units having a common basement, entrance, stairs, or public utilities. If built side by side, they either do not have a wall that extends from ground to roof or share a heating system or have interstructural public utilities such as water supply/sewage disposal. Included are buildings containing five or more housekeeping units in combination with space for business or professional use, provided the buildings are primarily for residential purposes.

### Items A136-151. Housing—selected characteristics, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing*, items A136-139, A144-146, and A150: STF 1C; items A140-143, A147-149, and A151: STF 3C.

These housing statistics are based on the 1980 Decennial Census of Housing, conducted by the Bureau of the Census on April 1, 1980. For a discussion of the decennial censuses, see the general note for items A2-32.

A housing unit (item A136) is a house, apartment, mobile home or trailer, group of rooms, or single room occupied or, if vacant, intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which have direct access from the outside of the building through a common hall.

The occupants of a housing unit may be a single family, one person living alone, or two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the definition for persons "living in group quarters"; see the text for items A2-32). For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria are applied to the previous occupants. Both occupied and vacant housing units are included in the housing inventory, except that recreational vehicles, tents, caves, boats, railroad cars, and the like are included only if they are occupied as someone's usual place of residence.

The percent change (item A137) represents the difference in the number of total housing units in a specified area over the

decade 1970-1980. The 1970 data used as a base to compute the percentage change for MSA's are for the areas defined as of June 1984. Extensive changes have taken place in the definition of MSA's since 1970.

Data on housing characteristics in the 1980 census reports are limited to year-round housing units, i.e., all occupied houses plus vacant units available or intended for year-round use. Vacant units held for seasonal use or migratory labor are excluded because of the difficulty in obtaining reliable data on their characteristics. Counts of the total housing inventory, however, are presented for each area shown in this publication.

The percent vacant (item A139) represents the proportion of housing units that are vacant. Included in this vacant classification are year-round units offered for sale; offered for rent or sale; rented or sold but awaiting occupancy; held for weekend or other occasional use; and held for a janitor or caretaker, settlement of an estate, pending repairs or modernizations, or personal reasons of the owner. Also included are units temporarily occupied by persons all of whom have a usual home elsewhere.

A housing unit is classified as occupied (item A144) if it is the usual place of residence of the person or group of persons living in it at the time of enumeration or if the occupants are only temporarily absent, e.g., away on vacation. A household consists of all persons who occupy a housing unit as their usual place of residence. In this publication, total occupied housing units may be obtained by adding "owner occupied" and "renter occupied."

A housing unit is "owner occupied" (item A145) if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. All other units are classified as renter occupied.

Figures for housing units with 1.0 or more persons per room (item A146) represent the number of units having more occupants than separate rooms. Rooms are defined as the number of whole rooms intended for living purposes in occupied and vacant housing units. For each unit, they include living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches suitable for year-round use, and lodgers' rooms. Excluded are strip or pullman kitchens, bathrooms, open porches, balconies, foyers, halls, half-rooms, utility rooms, unfinished attics or basements, or other spaces used for storage.

Data for house heating fuel (items A147-149) are shown. Gas (item A147) includes utility gas or gas piped underground from a central system (public utility company, municipal government, or the like) that serves the neighborhood; it also includes bottled, tank, or liquefied petroleum (LP) gas stored in tanks that are refilled or exchanged when empty. Fuel, oil, kerosene, etc. (item A149), include fuel oil, distillate, residual oil, kerosene, gasoline, alcohol, and other combustible liquids and semiliquids.

Median value, owner-occupied units (item A150), is the dollar amount that divides the distribution of owner-occupied housing units into two equal parts, one-half of the units falling below this value and the other half exceeding it. Value is defined as the respondent's estimate of what the house and lot would sell for if for sale. In this publication, statistics on value are presented for "specified noncondominium owner-occupied" units (i.e., one-family houses on less than 10 acres and with no business or medical office on the property).

Median gross rent, for specified renter-occupied units (item A151), is the dollar amount that divides the distribution of renter-occupied units into two equal parts, one-half having gross rent falling below this value and the other half exceeding it. Gross rent represents contract rent plus the estimated average monthly cost of utilities (water, electricity, gas) and fuels (oil, coal, kerosene, wood, etc.), to the extent that these are paid for by the renter (or by a relative, welfare agency, or friend) in addition to the rent. Gross rent is presented for "specified renter-occupied" units, which exclude one-family houses on 10 acres or more. Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included.

## EDUCATION

**Items A152-154. Public school enrollment, 1974-1975, 1979-1980, and 1982-1983.**

Source: U.S. National Center for Education Statistics, *Education Directory, Public School Systems*, annual, and unpublished data.

These figures represent enrollment at all levels taught in a public school system, from prekindergarten through grade 12. However, grades 13 and 14 do appear in a few school systems containing vocational education courses, and many operating school systems offer postgraduate courses. In addition, school system enrollment figures are tabulated on the basis of the county in which the superintendent's office is located, although some parts of the system may be in other counties.

For the 1974-1975 school year, the data reported for pupils represent average daily membership (ADM), except as noted. ADM is the average number of pupils on the rolls during the school year in districts currently operating schools. It is computed by dividing the sum of all days present and all days absent for each pupil when school is in session by the number of legal school days. Fall enrollment is generally about 1.5 percent higher than ADM. For New Jersey, New York, and South Dakota, fall 1974 enrollment is shown. The Vermont entry does not include students sent to private schools by local school districts through tuition agreements with private schools. The California and Missouri enrollment entries are average daily attendance (ADA). In California's compilation of ADA, pupils were counted present if they had a legal excuse for absence on a given day. Therefore, the ADA entries are roughly comparable to the ADM of other States. The Michigan entry is ADA that was estimated at 92 percent of fall 1974 enrollment. For Idaho, ADM is estimated as 1.0 times the 1974 ADA.

For other years shown, data were collected for fall enrollment only.

**Items A155 and A156. Years of school completed, 1980.**

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing, Summary Tape File 3C*.

Data presented for education in 1980 were obtained from a sample of the population as a part of the 1980 Census of Population and Housing, conducted by the Bureau of the Census. For a discussion of the decennial censuses, including data based on samples, see the general note for items A2-32.

Statistics for years of school completed are shown for persons 25 years old and over. The data were derived from two questions on the 1980 census questionnaire, one identifying the highest grade attended in regular school and the other asking whether the respondent finished that grade. Persons who passed a high school equivalency examination were marked "12" under the highest grade completed (if they had not completed or were not enrolled in a higher grade). Schooling received in foreign schools was to be reported as the equivalent grade or years in the regular American school system.

## MONEY INCOME

**Items A157-168. Median income—selected characteristics, 1969, 1979, and 1983.**

Source: U.S. Bureau of the Census. Items A157, A158, A162, and A165-168: *1980 Census of Population and Housing, Summary Tape File 3C*; items A159 and A160: *Current Population Reports, series P-26, Nos. 84-1-SC through 84-50-SC*; items A163 and A164: *1970 Census of Population, Characteristics of the Population, Number of Inhabitants (series PC70-1-A).*

Total money income is defined by the Bureau of the Census for statistical purposes as the sum of the following: Wage or salary income; net nonfarm self-employment income; net farm self-employment income; social security and railroad retirement income; public assistance income; and all other regularly received income such as interest, dividends, veterans' payments, pensions, unemployment compensation, and alimony. Receipts not counted as income include various "lump sum" payments such as capital gains or inheritances. The total represents the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc.

Per capita income (items A159-164) is based on resident population estimated as of April 1, 1969, 1979, and 1983. For a definition of per capita, see "Introduction."

Families and persons were classified as below poverty level (items A165-168) if their total family income or unrelated individual income was less than the poverty threshold specified for the applicable family size, age of householder, and number of related children under 18 present (see table below with poverty level thresholds). Poverty status is determined for all families (and, by implication, all family members). For persons not in families, poverty status is determined by their income in relation to the appropriate poverty threshold. Thus, two unrelated individuals living together may not have the same poverty status. Inmates of institutions, persons in military group quarters and college dor-

mitories, and unrelated individuals under 15 years old are excluded. For details of how the data were derived and limitations of the data, see the source.

The constant-dollar figures (items A162 and A164) are based on the annual average Consumer Price Index from the Bureau of Labor Statistics. The Consumer Price Index for 1969, 1979, and 1983 were 60.5, 119.8, and 164.4, respectively. Constant-dollar figures are estimates representing an effort to remove the effects of income changes from statistical series reported in dollar terms. However, the estimates do not reflect the price and cost-of-living differences that may exist between areas.

## PERSONAL INCOME

**Items A169-184. Personal income—total, 1980, 1982, and 1983; and transfer payments and earnings, 1983.**

Source: U.S. Bureau of Economic Analysis, *Local Area Personal Income, 1978-83.*

Total personal income (items A169, A180, and A181) is the current income received by residents of an area from all sources. It is measured before deductions of income and other personal taxes but after deduction of personal contributions for social security, government retirement, and other social insurance programs. It consists of wage and salary disbursements (covering all employee earnings, including executive salaries, bonuses, commissions, payments-in-kind, incentive payments, and tips), various types of supplementary earnings termed "other labor income," proprietors' income, rental income of persons, dividends, personal interest income, and government and business transfer payments.

Transfer payments (item A171) are income for which services are not currently rendered. They consist of both government and business transfer payments. Government transfer payments include payments under the following programs: Federal old-age, survivors, disability, and health insurance; unemployment insurance; railroad and government retirement; Federal and State government-insured workers' compensation; veterans benefits, including veterans life insurance; food stamps; black lung; Supplemental Security Income; and Aid to Families with Dependent Children. Government payments to nonprofit institutions, other than for work under research and development contracts, are also included. The principal business transfers are corporate gifts to nonprofit institutions and consumer bad debts.

Earnings (items A172-179) cover wage and salary disbursements, other labor income, and proprietors' income. Wage and salary income consists of monetary remuneration of employees, including corporate officers; commissions, tips, and bonuses; and receipts in-kind that represent income to the recipients. Retroactive wages are counted when paid rather than when earned. Other labor income includes employer contributions to private pension and welfare funds, employers' payments for privately administered workmen's compensation insurance, and directors' fees. Proprietors' income is the monetary income and income in-kind of proprietorships and partnerships, including the independent professions, and of tax-exempt cooperatives.

For discussions of manufacturing, wholesale trade, retail trade, and services, see the general notes for items A232-244, A245-252, A253-282, and A283-292, respectively. Data are also presented for finance, insurance and real estate; government; and "other," including agriculture, mining, contract construction, transportation, and public utilities.

Per capita personal income (items A182-184) is based on resident population enumerated as of April 1, 1980, and estimated as of July 1, 1983.

## LABOR FORCE

**Items A185-194. Civilian labor force—total and unemployment, 1980, 1983, and 1984.**

Source: U.S. Bureau of Labor Statistics, *Employment and Unemployment for States and Local Areas*, annual.

These estimates are the product of a Federal-State cooperative program in which State employment security agencies prepare labor force and unemployment estimates under concepts, definitions, and technical procedures established by the Bureau of Labor Statistics (BLS).

The national unemployment statistics published monthly by BLS are obtained from the Current Population Survey (CPS), a Bureau of the Census survey of households. The size of the CPS is sufficiently large to obtain reliable annual average unemployment estimates for all States and the District of Columbia. County estimates, which are controlled by the CPS-based State totals, are then derived through the use of statistics derived from State unemployment insurance operations, as well as adjustments based on data from the CPS, decennial census, and other sources.

Unemployment data (items A187, A188, A190, A191, A193, and A194) include all persons who did not work during the survey week, made specific efforts to find a job in the prior 4 weeks, and were available for work during the survey week (except for temporary illness). Persons waiting to be called back to a job from which they had been laid off and those waiting to report to a new job within the next 30 days are included in unemployment figures.

An explanation of the technical procedures used to develop monthly and annual local area labor force estimates appears monthly in the "Explanatory Note" for State and area unemployment data in the BLS periodical *Employment and Earnings*.

Due to the limitations of the estimation procedures, the estimates shown, especially on the county level, are potentially subject to significant error. As a result of the incorporation of the new MSA definitions into the labor force estimating procedures for sub-State areas, the MSA and county estimates for 1980 are not strictly comparable to those for 1983 and 1984.

## EMPLOYMENT

**Items A195-204. Private nonfarm employment, 1980 and 1982.**

Source: U.S. Bureau of the Census, *County Business Patterns, 1980 and 1982*.

These figures were obtained from surveys conducted by the Bureau of the Census and administrative records from the Internal Revenue Service (IRS). For years other than economic census years (years ending in 2 and 7), the Annual Company Organization Survey provides individual establishment data for multilocation firms. Individual report forms received in the 1982 economic censuses provide establishment data for multilocation firms included in the censuses, and the Annual Company Organization Survey provides establishment data for multilocation firms not included in the censuses. Data for single-location firms are obtained from other annual Census Bureau programs such as the Annual Survey of Manufactures, the Annual Retail Trade Survey, the Annual Wholesale Trade Survey, and administrative records of the IRS.

Industry classifications for 1982 are based on the 1972 edition of the *Standard Industrial Classification (SIC) Manual* and its 1977 supplement. For discussions of manufacturing, wholesale trade, retail trade, and services, see general notes for items A232-244, A245-252, A253-282, and A283-292, respectively. Data are also presented for finance, insurance, and real estate. Statistics for the following types of employment covered in whole or in part by the social security program are excluded from the basic tabulations: Government employees, self-employed persons, agricultural workers, and domestic service workers. Railroad employment jointly covered by Social Security and railroad retirement programs, employment on oceanborne vessels, and employment in foreign countries also are excluded.

Annual payroll (items A201 and A202) is the combined amount of wages paid, tips reported, and other compensation, including salaries, vacation allowances, bonuses, commissions, sick leave pay, and the value of payments in kind (such as free meals and lodging) paid to employees before deductions for social security, income tax, insurance, union dues, etc. All forms of compensation are included, whether or not subject to income tax or Federal Insurance Contributions Act tax, with the exception of annuities, third-party sick pay, and supplemental unemployment compensation benefits (even if income tax was withheld). For corporations, total annual payroll includes compensation paid to officers and executives; for unincorporated businesses, it does not include profit or other compensation of proprietors or partners. For single-establishment firms, annual payroll is the sum of the four quarters of total compensation. Estimating techniques based on the reporting patterns of eight quarters of administrative payroll are used to obtain payroll for those single-establishment firms' employers determined to be nonrespondents.

**Items A205 and A206. Federal civilian government employment—number and earnings, 1983.**

Source: U.S. Bureau of Economic Analysis. Item A205: Unpublished data; and item A206: *Local Area Personal Income, 1978-83*.

The estimates for number of employees (item A205) are a companion series to the personal income estimates. They are

constructed from similar sources, primarily the Unemployment Compensation for Federal Employees program, using the same concepts and definitions. The employment estimates are the average of 12 monthly observations of the number of full-time and part-time employees. They are not published by the source agency.

For a discussion of earnings, see the text for items A169-184.

## FEDERAL FUNDS AND GRANTS

### Items A207-212. Expenditures and type, 1984.

Source: U.S. Bureau of the Census, *Consolidated Federal Funds Report, Fiscal Year 1984*, Vol. I, *County Areas*.

Data on Federal expenditures and obligations were obtained from a report prepared in accordance with the Consolidated Federal Funds Report (CFFR) Act of 1982 (P.L. 97-326), which specified that the following reporting systems and agencies be used as data sources: Federal Assistance Award Data System (FAADS), Federal Procurement Data System, Office of Personnel Management (OPM), and Department of Defense (DOD). In addition, several other agencies were requested to provide data, usually for selected programs. The report reflects Federal Government expenditures by State and territory.

Most data covering direct payments for individuals (item A209) were taken from information reported to the FAADS. The two object areas of direct payments for individuals are (1) direct payments for retirement and disability benefits and (2) all other direct payments for individuals. All data represent actual expenditures during the fiscal years. For details, see the source.

Statistics covering procurement (item A210) were provided by the United States Postal Service (USPS) for Postal Service procurement and the Federal Procurement Data Center (FPDC) for procurement actions of all other Federal agencies, including DOD. Amounts provided by the USPS represent actual outlays for contractual commitments while amounts provided by the FPDC represent the value of obligations for contract actions and do not reflect actual Federal Government expenditures. In general, only current-year contract actions are reported for data provided by the FPDC; however, multiple-year obligations may be reported for contract actions of less than 3 years' duration.

The principal source of grants data (item A211) was the information submitted to the FAADS. The Bureau of the Census is the Executive Agent for the Office of Management and Budget and is responsible for the operation of the FAADS reporting systems. The FAADS data represent the Federal obligations incurred at the time the grant is awarded. The amounts reported do not represent actual expenditures since obligations in one time period may not result in outlays during the same time period. Moreover, initial amounts obligated may be adjusted at a later date, either through enhancements or deobligations. The data were derived by summing the quarterly reports that covered financial assistance awarded between October 1, 1983, and September 30, 1984. All grant awards were reported by State, county, and city of the initial recipient. For many grants, this reci-

ipient is the State government even though the grant monies are subsequently distributed to county, municipal, or township governments. These "pass-through" grants generally appear in the CFFR at the State capital city (and in the associated county). No attempt is made in the CFFR to assign the dollar amounts for these pass-through programs to locations other than the State capital.

Amounts reported for salaries and wages (item A212) were obtained from the OPM, DOD, and USPS. The DOD provided information on military payrolls; data covering civilian employees of DOD were obtained from OPM. Amounts reported by the DOD represent estimates of fiscal year outlays by State and county. Data for Postal Service employees were provided by the USPS and were based upon place of employment (postal facility). Amounts represent actual outlays during the fiscal year but with the national total distributed among the States and counties on an estimated basis. Data on salaries and wages for all other Federal Government employees (except for employees of the Central Intelligence Agency and the National Security Agency) were obtained from OPM. National totals represent actual expenditures during fiscal year 1984; the geographic distribution of these amounts by State and county was estimated based upon place of employment.

## LOCAL GOVERNMENT EMPLOYMENT AND FINANCE

### Items A213-231. General note.

Data on local governments are based on results of the 1982 Census of Governments. During the period 1850 to 1942, the census was taken at approximately 10-year intervals. The census of governments for the year 1957 was the first taken after 1942. Beginning with data for 1957, the census has been conducted by the Bureau of the Census every fifth year (for years ending in 2 and 7). For each county area, the financial data comprise amounts for all local governments, not only the county government but also any municipalities, townships, school districts, and special districts within the county. Statistics from governmental units located in two or more county areas are assigned to the county area containing the administrative office.

### Items A213-215. Employment—employees and payroll, 1982.

Source: U.S. Bureau of the Census, *1982 Census of Governments, Compendium of Public Employment*, series GC82(3)-2.

Figures for local government employment are shown for the month of October 1982. Data are collected for October because public employment is relatively stable in that month and free from seasonal employment fluctuations.

Full-time equivalent employment (item A213) is a computed statistic representing the number of full-time employees that could have been employed at the same total payroll cost if all persons were employed on a full-time basis at the average monthly pay for full-time workers. Employment refers to all

persons employed by and performing services for a government. Employees include all persons paid for personal services performed, including persons paid from State- or federally funded programs, paid elected officials, persons on paid leave status, and persons paid on a "per meeting," annual, semiannual, or quarterly basis.

Payroll amounts (item A215) represent gross payrolls for the 1-month period of October 1982. Gross payroll includes all salaries, wages, fees, or commissions paid to employees but does not include the value of benefits provided by employers. Payroll amounts were reported for the pay period that included the date of October 12, 1982; amounts reported for a period other than 1 month were converted to represent an amount for the month of October.

See also the general note for items A213-231.

**Items A216-231. Finances—general revenue, direct general expenditure, and general debt outstanding, 1981-1982.**

Source: U.S. Bureau of the Census, *1977 and 1982 Census of Governments, Compendium of Government Finances*, series GC77(4)-5 and GC82(4)-5.

Revenue and expenditure items include all amounts of money received and paid out, respectively, by a government and its agencies (net of correcting transactions such as recoveries of refunds), with the exception of amounts for debt issuance and retirement and for loan and investment, agency, and private transactions.

Payments among the various funds and agencies of a particular government are excluded from revenue and expenditure items as representing internal transfers. Therefore, a government's contribution to a retirement fund that it administers is not counted as expenditure, nor is the receipt of this contribution by the retirement fund counted as revenue.

Total general revenue (item A216) includes all revenue except utility, liquor stores, and insurance trust revenue. All tax revenue and intergovernmental revenue, even if designated for employee-retirement or local utility purposes, are classified as general revenue. However, to avoid duplication, revenue figures are net of reported transactions between local governments.

Intergovernmental revenue (items A217 and A218) covers amounts received from the Federal or State government as fiscal aid, reimbursements for performance of general government functions and specific services for the paying government, or in lieu of taxes. It excludes any amounts received from other governments for sale of property, commodities, and utility services. Figures for intergovernmental revenue from State government represent all intergovernmental revenue received from the State government, including amounts originally from the Federal Government but channeled through the State.

Taxes (items A219-221) consist of compulsory contributions exacted by governments for public purposes. However, this category excludes employer and employee payments for retirement and social insurance purposes, which are classified as insurance trust revenue, and special assessments, which are classified as nontax general revenue. Property taxes are taxes

conditioned on ownership of property and assessed by its value. Sales and gross receipts taxes, including "licenses" at more than nominal rates, are based on volume or value of transfers of goods or services, on gross receipts, or on gross income, and related taxes based on use, storage, production, importation, or consumption of goods. Sales and gross receipts taxes exclude dealer discounts or "commissions" allowed to merchants for collection of taxes from consumers. General sales taxes and selected taxes on sales of motor fuels, tobacco products, and other particular commodities and services are included.

Government expenditure includes all capital outlay, of which a major portion is commonly financed by borrowing, while governmental revenue does not include receipts from borrowing. Among other things, this distorts the relationship between totals of revenue and expenditure figures that are presented and renders it useless as a direct measure of the degree of budgetary "balance," as that term is generally applied.

Direct general expenditure (items A222-229) comprises all expenditures of the local governments, excluding utility, liquor stores, and insurance trust expenditures and any intergovernmental payments.

Local government expenditures for education (item A225) are mainly for provision and support of schools and other educational facilities and services, including those for educational institutions beyond the high school level operated by local governments. They cover such related services as pupil transportation; school lunch and other cafeteria operations; school health, recreation, and library services administered by local school systems; and dormitories, dining halls, and bookstores operated by public institutions of higher education.

Health and hospital expenditures (item A226) include health research, clinics, nursing, immunization, and other categorical, environmental, and general health services provided by health agencies; and establishment and operation of hospital facilities, provision of hospital care, and support of other public and private hospitals.

Public welfare expenditure (item A227) covers support of and assistance to needy persons contingent upon their needs. Included are cash assistance paid directly to needy persons under categorical (Old Age Assistance, Aid to Families with Dependent Children, Aid to the Blind, and Aid to the Disabled) and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other commodities and services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditure for welfare purposes. Pensions to former employees and other benefits not contingent on need are excluded.

Highway expenditure (item A228) is for provision and maintenance of highway facilities, including toll turnpikes, bridges, tunnels, and ferries, as well as regular roads, highways, and streets. Also included are expenditures for street lighting and for snow and ice removal.

Police and fire protection expenditures (item A229) provide for preservation of law and order and traffic safety, which include police patrols and communications, crime-prevention activities, detention and custody of persons awaiting trial, traffic safety,

and vehicular inspection; also, fire-fighting organization and auxiliary services, fire inspection and investigation, support of volunteer fire forces, and other fire-prevention activities, which include cost of fire-fighting facilities, such as fire hydrants and water, furnished by other agencies of the government.

Debt outstanding (items A230 and A231) includes all long-term debt obligations of the government and its agencies (exclusive of utility debt) and all interest-bearing short-term (i.e., repayable within 1 year) debt obligations remaining unpaid at the close of the fiscal year. It includes judgments, mortgages, and revenue bonds, as well as general obligation bonds, notes, and interest-bearing warrants. It excludes noninterest-bearing short-term obligations, interfund obligations, amounts owed in a trust or agency capacity, advances and contingent loans from other governments, and rights of individuals to benefits from government-administered employee-retirement funds.

See also the general note for items A213-231.

## MANUFACTURES

### Items A232-244. General note.

The first census of manufactures covered the year 1809. Between 1809 and 1963, a census was conducted periodically. Beginning with the 1967 census, Congress authorized the economic censuses to be taken at 5-year intervals covering years ending in 2 and 7.

The censuses of manufactures for 1947 through 1982 cover operating manufacturing establishments as defined in the 1972 and earlier editions of the *Standard Industrial Classification (SIC) Manual*. This is the system of industrial classification developed over a period of years by experts on classification in government and private industry under the guidance of the Office of Management and Budget. It provides data on a division and industry code basis, according to the level of industrial detail. For example, manufacturing is a major industrial division. One of its major groups is Food and kindred products (code 20), which is divided into industry groups, including Meat products (code 201). The industry groups are further divided into industries, such as Meat-packing plants (code 2011). The 1972 *SIC Manual* and a 1977 supplement may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The 1972 *SIC Manual* defines manufacturing as the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills that characteristically use power-driven machines and materials-handling equipment.

The census was conducted on an establishment basis. For all establishments with fewer than 5 employees and, depending on the industry, some establishments with fewer than 20 employees, data were based on administrative records. All establishments

with 20 or more employees were mailed census report forms. Each of the establishments covered in the census was classified in one of approximately 450 manufacturing industries with industry specifications in the SIC system. An establishment is usually classified in a particular industry on the basis of its major activity during the year, i.e., production of the products primary to that activity exceed, in value, production of the products primary to any other single industry. The statistics on employment, inventories, value added, and total shipments, including resales and miscellaneous receipts, etc., reflect both the primary and secondary activities of the establishments in that industry.

In all geographic totals published since 1949, the employment and payroll data for auxiliaries are also included. The relative importance of these establishments has increased substantially in recent years because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing, repair services, and miscellaneous others.

The 1982 Census of Manufactures universe included approximately 345,000 establishments. In 1982, as in earlier years, a minimum-size limit was set for including establishments in the census. All establishments employing one or more persons at any time during the year are included.

Approximately 140,000 small single-establishment companies were excused from filing reports. Selection of these small establishments was done on an industry-by-industry basis and was based on annual payroll and total shipments data, as well as on the industry classification codes contained in the administrative records of other Federal agencies. The cutoffs were selected so that these administrative records cases would account for no more than 3 percent of the value of shipments for the industry.

Information on the physical location of the establishment, as well as information on payrolls, receipts (shipments), and industry classification, was obtained from the administrative records of other Federal agencies under special arrangements, which safeguarded their confidentiality. Estimates of data for these small establishments were developed using industry averages in conjunction with the administrative records. The value of shipments and cost of materials were not distributed among specific products and materials for these establishments but were included in the product and material "not specified by kind" category.

In accordance with Federal law governing census reports, no data are published that would disclose the operations of an individual establishment or business. However, the number of establishments in a kind-of-business classification is not considered a disclosure, so this information may be given even though other information is withheld.

The 1977 and 1982 censuses were conducted under similar conditions and procedures, except for the following: Effective with the 1982 economic censuses, uniform instructions for reporting inventories were introduced for all sector reports. Up to 1982, respondents were permitted to value inventories using any generally accepted accounting method, such as first in, first out; last in, first out (LIFO); and market—to name a few. In 1982, all respondents were requested to report inventories at cost or

market. LIFO users were asked first to report inventory values prior to the LIFO adjustment and then to report the LIFO reserve and the LIFO value after adjustment for the reserve. The value added figures, which are computed based on inventory data, are not comparable to earlier data because of the change in reporting instructions.

**Items A232 and A233. Establishments—total and with 100 or more employees, 1982.**

Source: U.S. Bureau of the Census, 1977 and 1982 *Census of Manufactures, Geographic Area Statistics* (series MC77-A and MC82-A).

An establishment is a single physical location at which business is conducted or where services or industrial operations are performed. It is not necessarily identical with the company or enterprise, which may consist of one or more establishments under common ownership control.

The total establishment count should be viewed as an approximation rather than a precise measurement.

See also the general note for items A232-244.

**Items A234-240. All employees, 1977 and 1982; and production workers, 1982.**

Source: Same as items A232 and A233.

The all employees number (item A234) is the average number of production workers plus the number of other employees in mid-March. Included are all persons on paid sick leave, paid holidays, and paid vacations during the pay period. Excluded are members of the Armed Forces and pensioners on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms are excluded.

Payroll figures (item A236) include the gross annual earnings of all employees on the payroll of operating manufacturing.

The definition, which is the same as the one used for calculating the Federal withholding tax, includes all forms of compensation, such as salaries, wages, commissions, dismissal pay, all bonuses, vacation and sick leave pay, and compensation-in-kind, prior to such deductions as employees' social security contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of corporations but excludes payments to proprietors or partners of unincorporated concerns. Also excluded are payments to members of the Armed Forces and to pensioners carried on the active payroll of manufacturing establishments.

Production workers (item A237) include workers (up through the line-supervisor level) engaged in fabricating, processing, assembling, inspecting, receiving, storing, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial and guard services, product development, auxiliary production for plant's own use (e.g., power plant), recordkeeping, and other services closely associated with these production

operations. Employees above the working-supervisor level are excluded.

The number of production workers is the average for the payroll periods including the 12th of March, May, August, and November. Not included in this classification are all the other employees, defined as nonproduction employees, including those engaged in factory supervision above the line-supervisor level.

Production-worker hours (item A238) cover hours worked or paid for at the plant, including actual overtime hours (not straight-time equivalent hours). The data exclude hours paid for vacations, holidays, or sick leave. Production wages (items A239 and A240) represent all compensation paid to production workers.

See also the general note for items A232-244.

**Items A241-244. Value added by manufacture, value of shipments, and new capital expenditures, 1982.**

Source: Same as items A232-233.

Value added by manufacture (items A241 and A242) is derived by subtracting the cost of materials, supplies, containers, fuel, purchased electricity, and contract work from the value of shipments (products manufactured plus receipts for services rendered). The result of this calculation is adjusted by the addition of value added by merchandising operations (i.e., the difference between the sales value and the cost of merchandise sold without further manufacture, processing, or assembly) plus the net change in finished goods and work in process between the beginning- and end-of-year inventories. Because of the change in instructions for reporting inventories for 1982, the 1982 figure for value added is not strictly comparable to 1977 data.

Value of shipments (item A243) covers the received or receivable net selling values, free on board plant (exclusive of freight charges and taxes), of all products shipped, both primary and secondary, as well as miscellaneous receipts, such as receipts for contract work performed for others, installation and repair, sales of scrap, and sales of products bought and resold without further processing. Included are all items made by or for the establishment from materials owned by it, whether sold, transferred to other plants of the same company, or shipped on consignment. The net selling value of products made in one plant on a contract basis from materials owned by another was reported by the plant providing the materials. In the case of multi-unit companies, the manufacturer was requested to report the value of products transferred to other establishments of the same company at full economic or commercial value, including not only the direct costs of production but also a reasonable proportion of "all other costs" (including company overhead) and profit.

Data on new capital expenditures (item A244) are also covered in the census. For establishments in operation and establishments under construction but not yet in operation in 1982, manufacturers were asked to report their new expenditures for (1) permanent additions and major alterations to manufacturing establishments and (2) new machinery and equipment used for replacement and additions to plant capacity if they were of the

type for which depreciation accounts were ordinarily maintained. The totals for new expenditures exclude that portion of expenditures leased from nonmanufacturing concerns, new facilities owned by the Federal Government but operated under contract by private companies, and plant and equipment furnished to the manufacturer by communities and nonprofit organizations. Also excluded are expenditures for used plant and equipment (although reported in the census), expenditures for land, and cost of maintenance and repairs charged as current operating expenses.

See also the general note for items A232-244.

## WHOLESALE TRADE

### Items A245-252. General note.

The first census of business, which included wholesale trade, was conducted in 1930. Between 1933 and 1963, seven subsequent business censuses were taken. Beginning with the 1967 census, Congress authorized the economic censuses to be taken at 5-year intervals covering years ending in 2 and 7.

The 1982 Census of Wholesale Trade covered wholesale trade as defined in the *1972 SIC Manual*. It included all establishments with one or more employees primarily engaged in selling merchandise to retailers; to industrial, commercial, institutional, farm, or professional users; or to other wholesalers; or acting as agents or brokers in buying merchandise for or selling merchandise to such persons or companies. For a discussion of the *1972 SIC Manual*, see the general note for items A232-244. Two major industry groups, durable goods and nondurable goods, are classified in wholesale trade. Their two-digit SIC code numbers are 50 and 51, respectively. The census included wholesale liquor warehouses operated by State and local governments. Excluded were warehouses and other units that serviced or were auxiliary to wholesale establishments within the same organization.

The 1977 and 1982 censuses were conducted under similar conditions and procedures except for the following: (1) The boundaries of a number of areas for which data are shown in the 1982 census are not the same as in the 1977 census because of annexations, other boundary changes, redefinitions of SMSA's, and changes in qualifying criteria since 1977. (2) The 1977 employment item included three pay-period statistics omitted from the 1982 inquiry: The number of paid employees for the pay period including the 12th of May, August, and November. These statistics are collected and published by the Bureau of Labor Statistics. (3) In 1982, inventories were reported at cost or market using generally accepted accounting methods. Inventories calculated on a LIFO basis were reported before the LIFO adjustment. In 1977, inventories were reported by valuation method and summed to a total for each establishment. Method of valuation data are collected by the Bureau of the Census in the Annual Trade Survey.

**Items A245 and A246. Establishments—total and merchant wholesalers, 1982.**

Source: U.S. Bureau of the Census, *1977 and 1982 Census of Wholesale Trade, Geographic Area Statistics* (series WC77-A and WC82-A).

An establishment is a single physical location at which business is conducted. It is not necessarily identical with a company or enterprise, which may consist of one or more establishments. The count of establishments represents the number in business at the end of the year.

Merchant wholesalers (item A246) represent establishments primarily engaged in buying and selling merchandise on their own account. Included are such types of establishments as wholesale merchants or jobbers, industrial distributors, voluntary group wholesalers, importers, exporters, cash-and-carry wholesalers, retailer cooperative warehouses, terminal and country grain elevators, farm products assemblers, wholesale cooperative associations, and petroleum bulk plants and terminals operated by nonrefining companies.

See also the general note for items A245-252.

**Items A247-250. Sales—total and merchant wholesalers, 1982; and percent change, 1977-1982.**

Source: Same as items A245 and A246.

Sales figures represent sales of all establishments in business at any time during 1982. Sales include merchandise sold for cash or credit at wholesale and retail by establishments primarily engaged in wholesale trade; receipts from rental or leasing of vehicles, equipment, instruments, tools, etc.; receipts for delivery, installation, maintenance, repair, alteration, storage, and other services; and gasoline, liquor, tobacco, and other excise taxes that are paid by the manufacturer and passed on to the wholesaler. Sales figures do not include wholesale sales made by manufacturers, retailers, service establishments, or other businesses whose primary activity is other than the sale of merchandise at wholesale (e.g., service receipts, retail sales, etc.) by establishments primarily engaged in wholesale trade.

Sales are net after deductions for refunds and allowances for merchandise returned by customers. Trade-in allowances are not deducted from total sales. Total sales do not include carrying or other credit charges; sales (or other) taxes collected from customers and forwarded to taxing authorities; and nonoperating income from such sources as investments, rental or sale of real estate, etc.

See also the general note for items A245-252.

**Items A251 and A252. Paid employees and annual payroll, 1982.**

Source: Same as items A245 and A246.

Paid employees (item A252) comprise all employees, including salaried officers and executives of corporations, who were on the payroll in the pay period including March 12, 1982. Included are employees on paid sick leave, paid holidays, and paid vacations. Proprietors and partners of unincorporated businesses are not included.

Annual payroll (item A252) includes all forms of compensation, such as salaries, wages, commissions, bonuses, vacation allowances, sick-leave pay, and the value of payments in-kind (e.g., free meals and lodgings) paid during the year to all employees. For corporations, it includes amounts paid to officers and executives; for unincorporated businesses, it does not include profit or other compensation of proprietors or partners. Payroll is reported before deductions for social security, income tax, insurance, union dues, etc.

See also the general note for items A245-252.

RETAIL TRADE

Items A253-282. General note.

The first census of business, which included retail trade, was conducted in 1930. Between 1933 and 1963, seven subsequent censuses were taken. Beginning with the 1967 census, Congress authorized the economic censuses to be taken at 5-year intervals covering years ending in 2 and 7.

The 1982 Census of Retail Trade covered retail trade as defined in the 1972 *SIC Manual* (see the general note for items A232-244). It included all establishments primarily engaged in selling merchandise for personal or household consumption and rendering services incidental to the sale of goods. The census excluded governmental organizations classified in the covered industries except for liquor stores operated by State and local governments. Data for direct sellers with no paid employees and post exchanges, ship stores, and similar establishments operated on military posts by agencies of the Federal Government are not included. Establishments that are auxiliary (primary function is providing a service, such as warehouses) to retail establishments within the same organization are not included.

For the 1982 Census of Retail Trade, large- and medium-size firms, plus all firms known to operate more than one establishment, were sent questionnaires to be completed and returned to the Bureau by mail. For most very small firms, including those with no paid employees, data from existing administrative records of other Federal agencies were used instead. These records provided basic information on location, kind of business, sales, payroll, number of employees, and legal form of organization. In addition, more detailed information for selected kinds of business was obtained on the various questionnaires.

Census of retail trade figures represent a summary of reports for individual establishments rather than companies. For cases where a census report was received, separate information was obtained for each location where business was conducted. When administrative records of other Federal agencies were used instead of a census report, no information was available on the number of locations operated. Estimates of this number were derived from a sample and will be provided in the retail trade report *Miscellaneous Subjects* (series RC82-1-4). Each retail establishment was tabulated according to the physical location at which the business was conducted.

The 1977 and 1982 Censuses of Retail Trade were conducted under similar conditions and procedures except for the follow-

ing: (1) The boundaries of a number of areas for which data are shown in the 1982 census are not the same as in the 1977 census because of annexations, other boundary changes, redefinitions of SMSA's, and changes in qualifying criteria since 1977. (2) In 1977 and in prior censuses, data for leased departments were consolidated with the data for stores in which they were located. In the 1982 census, each leased department was treated as a separate establishment and was classified according to the kind of business it conducted. For example, in the 1977 reports, data for a leased department selling shoes were included in the kind-of-business statistics for the lessor store. For the 1982 reports, however, a leased department selling shoes would be considered a separate retail establishment under the "shoe store" classification. It should also be noted that, in the 1982 classifications (with the exception of department stores for which leased department data are recognized for classification purposes), the procedure that separated the leased department from the main store might have affected the kind-of-business code assigned to a relatively small number of main stores, because the coding procedure did not take into account the lines of merchandise carried by the leased department. (3) In 1977, the census included all retail nonemployer firms that reported a sales volume of \$2,500 or more, plus firms in operation for less than the full year that reported sales which, if projected to an annual basis, would have reached a total of \$2,500 or more. In the 1982 census, nonemployer firms are included if, on an annual basis, they reported a sales volume of at least \$1,000. Had the 1982 criterion been applied in the 1977 Census of Retail Trade, an additional 62,000 nonemployers with sales of \$120.6 million would have been included.

Items A253-258. All establishments—number, operated by unincorporated businesses, and sales, 1982.

Source: U.S. Bureau of the Census, 1977 and 1982 *Census of Retail Trade, Geographic Area Statistics* (series RC77-A and RC82-A).

For a definition of establishments, see the text for items A232 and A233.

When two or more activities were carried on at a single location under a single ownership, all activities generally were grouped together as a single establishment. The entire establishment was classified on the basis of its major activity, and all data for it were included in that classification. However, when distinct and separate economic activities (for which different industry classification codes were appropriate) were conducted under the same ownership at a single location, and when conditions prescribed by the *SIC Manual* for recognizing the existence of more than one establishment were met, separate establishment reports for each of the different activities were obtained in the census.

Figures for establishments operated by unincorporated businesses (item A254) represent the number of retail establishments that were unincorporated as defined by law. In 1982, the legal form of organization for firms in the mail universe

was based on the response to the organization status inquiry on the various census forms. The legal form of organization of non-mail firms was generally based on information available from the administrative records from other Federal agencies.

Sales figures represent sales of all establishments in business at any time during 1982. Sales include merchandise sold for cash or credit at retail and wholesale by establishments primarily engaged in retail trade; amounts received from customers for layaway purchases, receipts from rental or leasing of vehicles, equipment, instruments, tools, etc.; receipts for delivery, installation, maintenance, repair, alteration, storage, and other services; and gasoline, liquor, tobacco, and other excise taxes that are paid by the manufacturer or wholesaler and passed on to the retailer.

Sales are net after deduction for refunds and allowances for merchandise returned by customers. Trade-in allowances are not deducted from total sales. Total sales do not include carrying or other credit charges; sales (or other) taxes collected from customers and forwarded to taxing authorities; commissions from vending machine operators; and nonoperating income from such sources as investments, rental or sale of real estate, etc.

Sales do not include retail sales made by manufacturers, wholesalers, service establishments, or other businesses whose primary activity is other than retail trade.

See also the general note for items A253-282.

**Items A259-282. Establishments with payroll—paid employees; annual payroll; total; kind of business; and sales, by kind of business, 1982.**

Source: Same as items A253-258.

Establishments with payroll are those establishments that had some paid employment during 1982.

Paid employees (item A259) consist of the full-time and part-time employees, including salaried officers and executives of corporations, who were on the payroll in the pay period including March 12. Included are employees on paid sick leave, paid holidays, and paid vacations; not included are proprietors and partners of unincorporated businesses.

Payroll (item A260) includes all forms of compensation such as salaries, wages, commissions, bonuses, vacation allowances, sick-leave pay, and the value of payments in kind (e.g., free meals and lodgings) paid during the year to all employees. Tips and gratuities received by employees from patrons and reported to employers are included. For corporations, it includes amounts paid to officers and executives; for unincorporated businesses, it does not include profit or other compensation of proprietors or partners. Payroll is reported before deductions for social security, income tax, insurance, union dues, etc.

Building materials, hardware, garden supply, and mobile home dealers (item A262) include retail establishments primarily engaged in selling lumber and other building materials; paint, glass, and wallpaper; hardware; nursery stock; lawn and garden supplies; and mobile homes. They include lumber and other building materials dealers and paint, glass, and wallpaper stores selling to the general public, even if sales to contractors account for a larger proportion of total sales; these establishments are

known as retail in the trade. Establishments primarily selling these products but not to the general public are classified in wholesale trade.

General merchandise group stores (items A263 and A264) include retail stores that sell a number of lines of merchandise, such as dry goods, apparel and accessories, furniture and home furnishings, small wares, hardware, and food. The stores included in this group are known as department stores, variety stores, general merchandise stores, general stores, etc. Department stores (item A264) are establishments normally employing 25 or more people, having sales of apparel and soft goods combined amounting to 20 percent or more of the total sales, and selling each of the following lines of merchandise: (1) Furniture, home furnishings, appliances, and radio and TV sets; (2) a general line of apparel for the family; and (3) household linens and dry goods. To qualify as a department store, sales of each line must be less than 80 percent of total store sales. An establishment with total sales of \$10 million or more is classified as a department store even if sales of one merchandise line exceed the maximum percent of total sales, provided that the combined sales of the other two groups are \$1 million or more.

Food stores (item A265) are establishments primarily engaged in selling food for home preparation and consumption. They include grocery stores; meat and fish (seafood) markets; fruit stores and vegetable markets; candy, nut, and confectionery stores; dairy products stores; retail bakeries; and establishments primarily engaged in the retail sale of specialized foods not elsewhere classified, such as eggs and poultry, health foods, spices, herbs, coffee, and tea.

Automotive dealers, excluding gasoline service stations (item A266), are retail dealers selling new and used automobiles, boats, recreational vehicles and utility trailers, and motorcycles and mopeds; and dealers selling new automobile parts and accessories. They include establishments dealing exclusively in used automobiles but not establishments dealing exclusively in used parts. Also included are automobile repair shops maintained by establishments engaged in the sale of new automobiles. Automotive distributors, the greater part of whose sales are to dealers or to institutional users, are classified in wholesale trade.

Gasoline service stations (item A267) are establishments primarily engaged in selling gasoline and automobile lubricants. Usually these establishments also sell tires, batteries, and accessories and perform minor repair work and services. Establishments called garages but deriving more than half of their receipts from the sale of gasoline and automotive lubricants are included.

Apparel and accessory stores (item A268) include retail stores primarily engaged in selling clothing of all kinds and related materials for personal wear and adornment. Not included are establishments that meet the criteria for department stores or miscellaneous general merchandise stores even though most of their receipts are from the sale of apparel and apparel accessories. They consist of men's and boys' clothing and furnishings stores; women's ready-to-wear stores; women's accessory and specialty stores; children's and infants' wear stores; family clothing stores; men's, women's, children's and juveniles', and family shoe stores;

furriers and fur shops; and establishments primarily engaged in the retail sale of specialized lines of apparel and accessories not elsewhere classified, such as uniforms, bathing suits, raincoats, riding apparel, sports apparel, umbrellas, wigs, and toupees. Also included are custom tailors primarily engaged in making and selling men's and women's clothing (except fur apparel) to individual order.

Furniture, home furnishings, and equipment stores (item A269) include retail stores selling goods used for furnishing the home, such as furniture, floor coverings, draperies, glass and chinaware, domestic stoves, refrigerators, and household electrical and gas appliances. Establishments selling electrical and gas appliances are included in this group only if the major part of their sales consists of articles for home use. Dealers primarily engaged in selling antique and secondhand furniture are classified in miscellaneous retail stores. Stores primarily engaged in selling merchandise but also providing an interior decorating service are classified according to the merchandise handled.

Eating and drinking places (item A270) include retail establishments selling prepared food and drinks for consumption on the premises; they also include lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption. They consist of restaurants and lunchrooms, social caterers, cafeterias, refreshment places, contract feeding, ice cream and frozen custard stands, and drinking places (alcoholic beverages).

Drug and proprietary stores (item A271) are establishments engaged in the retail sale of prescription drugs and patent medicines. They may carry a number of related lines such as cosmetics, toiletries, tobacco, and novelty merchandise and may operate a soda fountain or lunch counter. These stores are classified on the basis of their usual trade designation rather than on a strict interpretation of commodities handled. Proprietary stores are establishments generally selling the same merchandise as drug stores, except that prescriptions are not filled and sold.

For a discussion of sales, see the text for items A247-250. See also the general note for items A253-282.

## TAXABLE SERVICE INDUSTRIES

### Items A283-292. General note.

Information on selected service industries, part of the economic censuses, was first collected in 1933. Between 1933 and 1967, seven subsequent censuses were taken. Beginning with the 1967 census, Congress authorized that the census be taken at 5-year intervals for the years ending in 2 and 7.

The 1982 Census of Service Industries covered service industries as defined in the 1972 *SIC Manual* (see the general note for items A232-244). For 1982, only establishments with some payroll during the year are available. The data in this report do not include establishments that are auxiliary (primary function is providing a service, such as warehouses) to service establishments within the same organization.

For the 1982 Census of Service Industries, large- and medium-size firms, plus all firms known to operate more than one

establishment, were sent questionnaires to be completed and returned to the Bureau of the Census by mail. For most very small firms, data from existing administrative records of other Federal agencies were used instead. These records provided basic information on location, kind of business, receipts, payroll, number of employees, and legal form of organization. In addition, more detailed information for selected kinds of business was obtained on the various questionnaires.

### Items A283-292. Establishments with payroll—number, paid employees, annual payroll, and recipients 1982.

Source: U.S. Bureau of the Census, *1982 Census of Service Industries, Geographic Area Statistics* (series SC82-A).

For a definition of establishments, see the text for items A232 and A33. Establishments with payroll are those that had some paid employment during 1982. For definitions of paid employees and annual payroll, see the text for items A259-282.

Total receipts (item A286) include all establishments in business at any time during the year. Receipts represent the basic dollar volume measure for service establishments of firms subject to Federal income tax. They include receipts from customers or clients for services rendered, from the use of facilities, and from merchandise sold during 1982 whether or not payment was received in 1982, except for health practitioners, legal services, and architectural, engineering, and surveying services, which reported on a cash basis (payments received in 1982 regardless of when services were rendered). Gasoline, liquor, tobacco, and other excise taxes, which are paid by the manufacturer or wholesaler and included in the cost of goods purchased are also included.

Receipts are net after deductions for refunds and allowances for merchandise returned by customers. Receipts do not include sales, occupancy, admissions, or other taxes collected from customers and remitted directly by the firm to a local, State, or Federal tax agency; nor do they include nonoperating income from such sources as interest, investments, or sale or rental or real estate.

Receipts do not include service receipts of manufacturers, wholesalers, retail establishments, or other business whose primary activity is other than service. They do, however, include receipts other than from services rendered (e.g., sale of merchandise to individuals or other businesses) by establishments primarily engaged in performing services and classified in the service industries.

Hotels, motels, trailering parks, and camps (item A288) include establishments engaged in providing lodging, or lodging and meals, and camping facilities. Hotels that provide accommodations for permanent residents, and residential mobile home parks are not included.

Automotive repair, services, and garages (item A289) include establishments primarily engaged in furnishing automotive repair, parking, rental, and other services to the general public. Similar facilities owned and operated by concerns for their own use and not available to the general public are treated as auxiliary establishments of those concerns and are not included here.

Automotive repair departments maintained by establishments engaged in the sale of new automobiles are classified in retail trade, as are gasoline service stations (where sales of merchandise, including fuel, exceed repair receipts). Also included are establishments primarily engaged in furnishing automotive services, not elsewhere classified, such as lubricating, towing, diagnostic, undercoating, and inspection services.

Amusement and recreation services (item A290) include establishments primarily engaged in providing amusement, recreation, or entertainment on payment of a fee or admission charge. Gambling businesses, where legal, are also included in this major group; however, combined gambling and lodging facilities with 25 or more classrooms are not included.

Health services, except hospitals (item A291), include establishments primarily engaged in furnishing medical, surgical, and other health services to persons. Associations or groups primarily engaged in providing medical or other health services to members are included, but those that only provide insurance covering hospitalization or medical costs are not included here.

Legal services (item A292) include establishments primarily engaged in offering legal advice or legal services, the head or heads of which are members of the bar. Associations of lawyers formed solely for the sharing of expenses (including payroll) and not for the purpose of jointly practicing their profession are also included. Receipts are not applicable for these associations since their operations are funded by reimbursements from member firms and not considered operating receipts for legal services provided. Neither are such entities considered separate operating establishments; however, their payroll and employment data are included. Nonprofit legal services (including legal aid societies) are classified here.

See also the general note for items A283-292.

## Banking

**Items A293-295. Bank deposits—total and time, 1983 (June); and percent change, 1982-1983.**

Source: Federal Deposit Insurance Corporation, *Summary of Accounts and Deposits in All Commercial and Mutual Savings Banks, June 30, 1982 and 1983*

Total figures (item A293) represent deposits in all commercial and mutual savings banks in the United States. The amount of bank deposits by size of account is shown in the source for total deposits and for four deposit categories: Demand, IPC (individuals, partnerships, and corporations); savings, IPC; other time, ICP; and public funds. For all msa's, counties, and other geographic areas, individual banking offices—not the combined totals of the bank—are the source of the data. Banking office is defined to include all offices that actually hold deposits and to exclude consumer installment loan offices, computer centers, and other nondeposit installations, such as some electronic funds transfer units. It also excludes "nondeposit" trust companies.

Time deposits (item A295) cover only deposits of individuals, partnerships, and corporations. They consist primarily of savings

deposits of individuals, subject to withdrawal after 7 days' notice, and of other deposits that may not be withdrawn without prior notice. The public sector is not included.

**Item A296. Savings and loan associations, savings capital, 1983.**

Source: Federal Home Loan Bank Board, *Summary of Savings Accounts by Geographic Area, September 1983*.

These figures are based on the results of the survey of the dollar volume of accounts and savings and loan associations insured by the Federal Savings and Loan Insurance Corporation as of September 30, 1983.

For a given geographical area, data are presented for offices of savings and loan associations—whether home or branch—located in the area.

## ELECTIONS

**Items A297 and A298. Total vote cast for President and vote for leading party, 1984.**

Source: Elections Research Center, *America Votes, 16*. (Copyright.)

As a result of the legislation enacted by the Congress in 1970 and adoption of the 26th Amendment to the Constitution in 1971, the minimum voting age is 18 in all States.

Data presented in this table may differ somewhat from the official figures issued by the Clerk of the House of Representatives in *Statistics of the Presidential and Congressional Elections* due to revisions made to some of the data by State sources subsequent to submission to Congress. The Elections Research Center receives data from the States after such revisions are made. Write-in votes are not available in all cases by county.

The percent of the vote cast for the leading party (item A298) represents the percent of the total vote cast for that party with a majority of plurality.

## Table B—Central Cities

Table B features 86 data items for 510 central cities located in the 243 MSA's included in this publication. Most of the items in table B match items presented in table A. For source notes and explanations, see corresponding table-A text for the following subjects: Area and population, households, births, deaths, housing, crimes, education, labor force, income, manufactures, wholesale trade, retail trade, and taxable service industries. For a definition of central cities, see "Geographic Concepts and Codes, Basic Standards for Establishing MSA's, Section 4. Central Cities."

## Table C—Regions, Divisions, and States

Table C presents 1,873 items of data for each State, the United States as a whole, each census geographic region and division where possible, and the District of Columbia.

The items are numbered in the source notes from C1 through C1873. Many of these, or highly related, statistics are also presented for metropolitan and component areas in table A. Cross-references to material in table A indicate where additional material presented in table C may be found.

## AREA AND POPULATION

### Items C1-4. Area—total, State rank, land, and water, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population, Number of Inhabitants* (series PC80-1-A).

For an explanation of land area, see the text for item A1. Water (item C4) is considered permanent inland water surface, such as lakes, reservoirs, and ponds having 40 or more acres of area; streams, sloughs, estuaries, and canals one-eighth statute mile or more in width; deeply indented embayments and sounds, and other coastal waters behind or sheltered by headlands or islands separated by less than 1 nautical mile of water, and islands having less than 40 acres. Excluded are areas of oceans, bays, sounds, etc., lying within the U.S. jurisdiction but not defined as inland water. For Alaska, the values are 640 acres or more for inland water and one-half mile or more in width for streams.

### Items C5-120. General note.

For a discussion of the decennial censuses and population estimates for intercensal years, see the general note for items A2-32.

### Items C5-37. Population—total, rank, change, density, and percent distribution, selected years, 1960-1985; and projections, 1990 and 2000.

Source: U.S. Bureau of the Census. Items C5-7, C11, C15, C18, C22, and C26-29: *Current Population Reports*, series P-25, No. 985; items C8, C12, C16, C19, and C23: *1980 Census of Population and Housing*, Summary Tape File 1C; items C9, C10, C13, C14, C17, C20, C21, C24, and C25: *1960 and 1970 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC60-1-A and PC70-1-A); items C30-32: *Current Population Reports*, series P-25, No. 957; items C33-37: *Current Population Reports*, series P-25, No. 937.

For discussions of total population and density, see the text for items A2-32.

The estimates of the net change from 1970 to 1980 (item C30) include a residual net migration plus the "error of closure," the unexplained difference between the estimated population at the end of the decade and the census count for that date. Net total migration (items C28, C29, and C32) comprises net migration from abroad, net interregional, interdivisional, or interstate migration, and movement of persons in the Armed Forces. For details on methodology, see the source.

At the national level, population projections (items C33-37) indicate the approximate future level and characteristics of the

population under given assumptions of future fertility, mortality, and net migration. The method used to develop the projections involves preparation of each of the components of population change—births, deaths, and net migration—and the combination of these with July 1 estimates of the current population. Projections for States incorporate further assumptions about the redistribution of population as a consequence of internal migration. Population projections shown here for States are consistent with counts shown in 1980 census advance reports, series PHC80-V.

### Items C38-62. Population—capital city and largest city, 1984; by residence—urban and rural, 1970 and 1980; and inside and outside metropolitan areas, 1960, 1970, 1980, and 1984.

Source: U.S. Bureau of the Census. Items C38-41: *Current Population Reports*, Census Bureau press release No. CB 85-140; items C42, C44, and C46: *1980 Census of Population and Housing*, Summary Tape File 1C; items C43, C45, C47, C51, C52, C55, C58, C59, and C62: *1960 and 1970 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC60-1-A and PC70-1-A); items C48-50, C53, C54, C56, C57, C60, and C61: *Current Population Reports*, series P-25, No. 976.

According to the 1980 census definition, the urban population (items C42-45) comprises all persons living in (a) places of 2,500 or more inhabitants incorporated as cities, villages, boroughs (except in Alaska and New York), and towns (except in the New England States, New York, and Wisconsin), but excluding those persons living in the rural portions of the extended cities (places with low population density in one or more large parts of their area); (b) census designated places (previously termed unincorporated) of 2,500 or more inhabitants; and (c) other territory, incorporated or unincorporated, included in urbanized areas. An urbanized area consists of a central city or a central core, together with contiguous closely settled territory that combined have a total population of at least 50,000. The definition of urban has remained substantially unchanged since 1970. For comments on exceptions, see U.S. Bureau of the Census, *1980 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC80-1-A), appendix A. In all definitions, the population not classified as urban constitutes the rural population (items C46 and C47).

Data for metropolitan areas (items C48-55) represent NECMA's for New England States and MSA's, CMSA's, and PMSA's for other States.

### Items C63-120. Population, by age, 1970, 1980, and 1984; by race and Spanish origin, 1970 and 1980; ancestry, language, place of birth, and marital status, 1980; and movers, 1975-1980.

Source: U.S. Bureau of the Census. Items C63-72: *Current Population Reports*, series P-25, No. 970; items C73-77, C83-106, C119, and C120: *1980 Census of Population and Housing*, Summary Tape File 1C; items C78-82: *1970 Census of*

*Population, Characteristics of the Population, General Population Characteristics* (series PC70-1-B); items C107-118: *1980 Census of Population and Housing, Summary Tape File 3C*.

For 1984, age (items C63-72) represents the number of completed years from birth to July 1; for 1970 and 1980 (items C73-82), the data show completed years from birth to April 1.

For discussions of age, males per 100 females, White and Black race data, Spanish origin, language spoken at home, residency, and movers, see the text for items A2-32.

The American Indian, Eskimo, and Aleut population (item C96) includes persons who indicated their race as Indian (American) or who did not indicate a specific race category but reported the name of an Indian tribe, as well as persons who indicated their race as Eskimo or Aleut.

The Asian and Pacific Islander population (item C97) includes persons who indicated their race as Chinese, Filipino, Japanese, Asian Indian, Korean, Vietnamese, Hawaiian, Samoan, and Guamanian, as well as persons who provided write-in entries of such Asian and Pacific Islander groups as Cambodian, Laotian, Pakistani, and Fiji Islander. Also, persons who did not classify themselves in one of the specific race categories but wrote in an entry indicating one of the specific categories were classified accordingly.

Data on ancestry (items C107 and C108) were derived from sample information. The 1980 census marked the first time that a general question on ancestry (ethnicity) was asked in a decennial census. The question was based on self-identification and was open ended (respondents were required to write their answers). Ancestry refers to a person's nationality group, lineage, or the country in which the person's parents or ancestors were born before their arrival in the United States. Thus, persons reported ancestry regardless of the number of generations removed from their country of origin. Ancestry and race are separate characteristics; therefore, persons reporting a particular ancestry may be of any race.

Place of birth (items C110-114) refers to the mother's usual State of residence at the time of the birth rather than in terms of the location of the hospital if the birth occurred in a hospital. Persons born in a foreign country (items C111-114) were asked to report their country of birth according to international boundaries as recognized by the U.S. Government on April 1, 1980. Since numerous changes in boundaries of foreign countries have occurred in the last century, some of these persons may have reported their country of birth in terms of boundaries that existed at the time of their birth or emigration or in accordance with their own national preference. The data were obtained from a sample.

## HOUSEHOLDS

**Items C121-146. Households—total, 1970, 1980, and 1984; persons per household and family, 1970 and 1980; and in group quarters, 1980.**

Source: U.S. Bureau of the Census. Items C121 and C125: *Current Population Reports*, series P-25, No. 974; items C122, C123,

C126, C127, C129, C131, C133, C135, C137, C139, and C141-146: *1980 Census of Population, Summary Tape File 1C*; items C124, C126, C128, C130, C132, C134, C136, C138, and C140: *1970 Census of Population, Characteristics of the Population, General Population Characteristics* (series PC70-1-B).

For a discussion of households, see the text for items A33-40. For a discussion of persons living in group quarters, see the text for items A2-32 (specifically, item A32).

## VITAL STATISTICS

**Items C147-159. Births and birth rates, 1970, 1980, 1982, and 1983.**

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. 1, *Nativity*, annual.

For discussions of total births, birth rates, and Black births, see the text for items A45-67.

**Items C160-171. Legal abortions—total, 1975 and 1980-1982; and rate and ratio, 1975 and 1980-1982.**

Source: 1975: The Alan Guttmacher Institute, New York, NY, *Family Planning Perspectives*, vol. 9, No. 3 (1975); 1980: Henshaw, S.K., ed., *Abortion Services in the United States, Each State, and Metropolitan Area, 1979-1980*, The Alan Guttmacher Institute, New York, NY, 1983 (copyright); 1981 and 1982: Henshaw, S.K., J.D. Forrest, and E. Blaine, "Abortion Services in the United States, 1981 and 1982," *Family Planning Perspectives*, vol. 16, No. 3, May/June 1984, The Alan Guttmacher Institute, New York, NY.

These data are from surveys of hospitals, clinics, and physicians identified as providers of abortion services. Data are by State of occurrence. Abortion rates (items C164-167) are computed per 1,000 women 15-44 years of age as of July 1 of the specified years; ratios (items C168-171) are computed as the number of abortions per 1,000 live births for the 1-year period beginning July 1 of each year indicated and ending June 30 of the next.

**Items C172-212. Deaths—number and rate, 1970 and 1980-1982; infant, 1970, 1980, and 1982; by cause, 1970, 1980, and 1982.**

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. II, *Mortality*, annual.

Mortality statistics by cause of death (items C196-212) are compiled in accordance with World Health Organization regulations, which specify that member nations classify causes of death according to the International Classification of Diseases (ICD). Data for 1980 and 1982 are based upon the ninth revision of the ICD, which was employed beginning in 1979. For

a discussion of how mortality data are compiled, see the text for items A45-67. Data for 1970 are based on the eighth revision. Each revision of the ICD introduces a number of discontinuities in mortality statistics; for a discussion of those between the eighth and ninth revisions of the ICD, see *Monthly Vital Statistics Report*, vol. 28, No. 11 supplement.

**Items C213-232. Marriages and divorces—number and rate, 1970, 1975, 1980, 1982, and 1983.**

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. III, *Marriage and Divorce*, annual.

For a discussion of how the data were derived, see the text for items A41-44. Marriage and divorce rates are based on resident population enumerated as of April 1 for 1970 and 1980 and estimated as of July 1 for other years shown.

**HEALTH, SOCIAL INSURANCE, AND NUTRITION**

**Items C233-248. Physicians, dentists, and nurses—number and rate, selected years, 1970-1983.**

Source: Items C233-242: American Medical Association, Chicago, IL, *Distribution of Physicians in the United States, 1970*, and *Physician Characteristics and Distribution in the U.S.*, annual (all copyrighted); items C243-246: American Dental Association, Chicago, IL, *Distribution of Dentists in the United States, by State, Region, District, and County, 1979 and 1982* (copyright); items C247 and C248: U.S. Department of Health and Human Services, Health Resources and Services Administration, Bureau of Health Professions, Rockville, MD, unpublished data.

For a discussion of physicians see the text for items A68-73. Unless otherwise indicated, these data include physicians not classified by type of professional activity.

Data for dentists (items C243-246) represent the number of professionally active dentists, excluding those who are retired, who are no longer practicing, or whose locations are unknown. The counts for 1979 and 1982 are based on results of surveys conducted by the American Dental Association from April 1978 through March 1979 and April 1981 through March 1982, respectively. The 1979 figures exclude 1979 graduates. Likewise, 1982 graduates were not included in the 1982 counts. The total for both years include clinical practitioners, dental school faculty or staff, dentists in the Armed Forces or public health field, members of hospital and health organization staffs, graduate students, and students involved in residency programs.

Data for nurses (items C247 and C248) are based on a survey conducted by the Division of Nursing, Bureau of Health Professions. The data represent the number of employed registered nurses as of December 31, 1983.

**Items C249-270. Hospitals—all, 1980 and 1983; short-term (non-Federal), daily room charge, and average cost to hospital per day, 1983.**

Source: Items C249-268 and C270: American Hospital Association, Chicago, IL, *Hospital Statistics, 1980 and 1983* (copyright); item C269: Health Insurance Association of America, Washington, DC, *Source Book of Health Insurance Data, 1983*.

Hospital figures cover only hospitals registered by the American Hospital Association. To be accepted for registration, a hospital must meet certain requirements relating to number of beds, construction, equipment, medical and nursing staff, patient care, clinical records, surgical and obstetrical facilities, diagnostic and treatment facilities, laboratory services, etc.

Data for beds (items C251-254) are based on the average number of beds in the facilities over the reporting period. The average number of inpatients receiving care each day (items C255, C256, and C266) excludes newborns; the occupancy rate (items C257, C258, and C267) is the ratio of the average daily census to the average number of beds. Personnel figures (items C259-262 and C268) include full-time and full-time equivalents of part-time personnel (calculated on the basis that two part-time persons equal one full-time person) but exclude medical and dental interns, residents, and other trainees.

**Items C271-281. Nursing homes, State facilities for mentally retarded, and private facilities for mentally retarded, 1982; and mental care hospitals, 1981.**

Source: Items C271-274: U.S. National Center for Health Statistics, *Vital and Health Statistics* (series 14); items C275-278: U.S. National Institute of Mental Health, unpublished data; items C279 and C280: Rotegard and Bruininks, University of Minnesota, Minneapolis, MN, *Mentally Retarded People in State-Operated Residential Facilities: Years Ending June 30, 1980 and 1982*; item C281: Hauber, F.H., R.H. Bruininks, and B.K. Hill, University of Minnesota, Minneapolis, MN, *1982 National Census of Residential Facilities: Summary Report* (CRS No. 19).

Data for nursing homes cover those facilities with 25 or more beds that provide to adults who require either (a) nursing care or (b) personal care (such as help with bathing, eating, using toilet facilities, or dressing) and/or supervision over such activities as money management, walking, and shopping. The data shown exclude residential facilities in Florida, Michigan, Kentucky, and California, which offer no nursing services and provide only personal care or supervisory care. (Facilities meeting this definition of residential facilities also exist in the other 46 States, but because they cannot be identified precisely as residential, they appear in the counts of nursing homes.) Hospital-based nursing homes are excluded. Data are collected via the National Master Facility Inventory (NMFI) Survey. Information is obtained on names, locations, and types of facilities and number of beds and residents or patients. The NMFI is a complete census of eligible institutions. A comprehensive file is periodically updated to

include names and addresses of newly established inpatient facilities obtained from State licensing agencies. Missing questionnaire items are imputed by using either previously reported information or by using current data from similar responding facilities.

Data for mental hospitals (items C275-278) are for State, county, and private hospitals and represent the number of patients as of the end of 1981. The data include estimates for nonreporting facilities.

Figures for State institutions for mentally retarded are as submitted by many State agencies, as of June 30, 1982. The data reflect some estimates, including estimates for underreporting. Facilities operated as mental hospitals and other care facilities are excluded.

Private residential facilities for mentally retarded residents represent privately operated living quarters that provide 24-hour, 7-days-a-week responsibility for room, board, and supervision of mentally retarded persons. The data exclude single-family homes providing services to a relative; nursing homes, boarding homes, and foster homes not formally licensed or contracted as mental retardation service providers; and independent living programs that have no staff residing in the facility.

**Items C282-299. Personal health care expenditures—selected characteristics, 1980-1982.**

Source: U.S. Health Care Financing Administration, *Health Care Financing Review*, summer 1985.

Data for personal health care expenditures cover all expenditures for health services and supplies except the net cost of insurance and administration, government public-health activities, and expenditures of philanthropic agencies for fund-raising activities. The distribution of expenditures by region, division, and State represents location of the provider of services. Per capita figures cannot be interpreted directly as spending per resident unless substantially all of the services provided in a State are consumed by the residents of that State.

**Items C300-309. Health insurance (Medicare) under Social Security—persons enrolled and benefit payments, 1970, 1980, and 1982; and persons served, 1982.**

Source: U.S. Health Care Financing Administration, *Medicare Health Insurance for Aged; Amount Reimbursed by State and County, 1970; Medicare Health Insurance for Aged and Disabled, 1980; and Annual Medicare Program Statistics, 1982.*

For a discussion of hospital and medical insurance under the Medicare Program, see the text for items A82-89. Persons served represent enrollees who used covered services, incurred expenses greater than the deductible amount, and for whom Medicare paid benefits. Persons are counted once for each type of covered service used. A person receiving services two or more times during the year is counted as one person served, except when an individual has incurred services both as an aged and

a disabled beneficiary during the same year. Payments data for States are for the calendar year and represent reimbursements.

**Items C310-315. Medicaid—recipients and payments, 1975, 1980, and 1983.**

Source: U.S. Health Care Financing Administration, unpublished data.

Under Medicaid, all States except Arizona offer basic health services to eligible low-income persons. The cost of providing these services is shared with the Federal Government, but each State determines its own eligibility criteria and may set benefits above the minimum established by Federal law. Almost all recipients of cash welfare programs are automatically eligible. In addition, 29 States extend Medicare to families who satisfy all but the income requirements for welfare and who either have incomes that meet State definitions of "medically needy" or incur medical expenses that lower their income to medically needy levels.

**Items C316-331. Social Security benefits—recipients and payments, 1970, 1980, and 1983; and average monthly benefits, 1983.**

Source: U.S. Social Security Administration, *Social Security Beneficiaries by State and County, 1970, 1980, and 1983.*

For a discussion of the Social Security Program, see the text for items A90-102.

Rates (item C320) are based on resident population estimated as of July 1, 1983.

**Items C332-365. Public assistance recipients as a percent of total population, 1975, 1980, and 1984; Supplemental Security Income Program, 1975, 1980, and 1984; and Aid to Families with Dependent Children, 1975, 1980, 1982, and 1983.**

Source: U.S. Social Security Administration. Items C335-339 and C350-359: *Social Security Bulletin*, monthly; items C340-349 and C360-365: *Annual Statistical Supplement to the Social Security Bulletin and Public Assistance Statistics*, monthly.

For discussions of the Supplemental Security Income Program and the Aid to Families with Dependent Children Program, see the text for items A103-108 and A109-116, respectively.

**Items C366-381. Federal Food Stamp and School Lunch Programs—participants and Federal cost, 1975, 1980, 1982, and 1983.**

Source: U.S. Department of Agriculture (USDA), Food and Nutrition Service, *National School Lunch Program and Agricultural Statistics*, both annual; and unpublished data.

The Food Stamp Program (items C366-373) became the national approach to general food assistance in 1974, replacing

direct distribution of foods to individuals. It is designed to help low-income households buy a more nutritious diet. Under the program, participants use stamps to buy food through regular market channels. Under the Food Stamp Act of 1977, participants are no longer required to pay for a portion of their food stamp allotments. Food stamp income eligibility limits are based on the Federal poverty guidelines and net monthly income at or below 130 percent of the Federal poverty guidelines and net monthly income (after allowable deductions) at or below 100 percent of the Federal poverty guidelines. Income requirements for households containing at least one elderly person are more liberal. Households with financial resources exceeding \$1,500 are not eligible to participate in the program. Households of two or more persons in which one member is 60 years old or older have an asset limitation of \$3,000.

Since 1946, the National School Lunch Program (items C374-381) has made it possible for schools of high school grade and under to serve nutritious lunches to students each school day. It is administered at the Federal level by the Food and Nutrition Service of USDA. Within the States, the State educational agency operates the program through agreements with local schools or school districts. In certain schools, the program is administered by the appropriate Food and Nutrition Service Regional Office. Any public school of high school grade or under is eligible to participate. Any nonprofit, private school of high school grade or under whose average yearly tuition does not exceed \$1,500 per student is eligible to participate. Also eligible are public and licensed nonprofit, private residential child-care institutions, such as orphanages, homes for retarded children, and temporary shelters for runaway children.

**Items C382-403. State Unemployment Insurance—selected characteristics, 1980, 1982, and 1983.**

Source: Items C382 and C383: U.S. Bureau of Labor Statistics, *Employment and Wages*, quarterly; items C384-403: U.S. Unemployment and Training Administration, *Unemployment Insurance Statistics*, monthly, and *Annual Report of the Secretary of Labor*.

State unemployment insurance laws pay benefits, related to the individual's past earnings, to unemployed eligible workers. State laws vary concerning the length of time benefits are paid and their amount. In most States, benefits are payable for 26 weeks and, during periods of high unemployment, extended benefits are payable with congressional approval, under a Federal-State program to those who have exhausted their regular State benefits. The basic benefit can vary among States by over 100 percent. Some States also supplement the basic benefit with allowances for dependents.

Unemployment insurance is funded by a Federal unemployment tax levied on the taxable payrolls of most employers. Taxable payroll under the Federal Act and most State laws is the first \$6,000 in wages paid each worker during a year. Employers are allowed a percentage credit of taxable payroll for contributions paid to States under the State unemployment insurance laws.

The remaining percent of the Federal tax finances administrative costs, the Federal share of extended benefits, and advances to States.

**Items C404-407. Workers' compensation payments, 1975 and 1980-1982.**

Source: U.S. Social Security Administration, *Social Security Bulletin*, April 1984, and unpublished data.

Workers' compensation provides medical care and maintenance protection to workers disabled from work-related injury or illness. The program includes protection under the laws of 50 States, the District of Columbia, and two Federal programs (the Federal Employees Compensation Act and the Longshoremen's and Harbor Workers' Compensation Act). In addition, the Federal Coal Mine Health and Safety Act established the Black Lung Program for coal miners disabled by pneumoconiosis and for specified dependents and survivors. The data include information on benefits for work-related injury and disease, including the combined benefits paid under the entire Black Lung Program administered by the Department of Labor and the Social Security Administration.

Cash benefits are payable under workers' compensation to replace lost wages during periods of temporary or permanent total disability and to provide compensation for partial disabilities such as those resulting from loss of body members. Cash benefits are also payable to survivors of workers who die because of work-related causes. In addition, workers' compensation pays for medical care and hospitalization in connection with these workplace disabilities. (Medical benefits may be paid even if no cash award is paid.)

There was a considerable range in the amount of benefits paid by States in 1982. The range reflects a number of influences, such as variation in State benefit formulas and maximum benefits, the differences in methods of administration, extent of litigation, occupational distribution and incidence of disability, and, most important, the size of the labor force.

**Items C408-417. Vocational rehabilitation, 1975, 1981, and 1982; and foundations, 1982-1983.**

Source: Items C408-413: U.S. Department of Education, Rehabilitation Services Administration, *State Vocational Rehabilitation Agency Program Data in Fiscal Years*, annual; items C414-417: The Foundation Center, New York, NY, *The National Data Book*, Ninth Edition, 1985.

Vocational rehabilitation (items C408-413) is defined as restoration, preservation, or development of the ability to function in productive activity. Rehabilitation services provided by State vocational rehabilitation agencies with matching State and Federal funds include medical restoration, training, counseling, guidance, and placement services. The data include expenditures only under the basic support provisions of the Rehabilitation Act. Active cases accepted for rehabilitation services during the year

plus active cases on hand at the beginning of the year are included in active cases served.

Figures for foundations (items C414-417) are for the latest year reported, usually 1982 or 1983. A foundation is defined as a nongovernmental nonprofit organization whose goal was to maintain or aid social, educational, religious, or other activities deemed to serve the common good. The data exclude organizations that (1) make general appeals to the public for funds; (2) act as trade associations for industrial or other special groups; or (3) do not currently award grants.

## EDUCATION

**Items C418-425. Schools, fall—public, 1982-1983; and private, 1980-1981.**

Source: U.S. National Center for Education Statistics, *Digest of Education Statistics*, annual, and special tabulations.

The National Center for Education Statistics defines a school as "a division of the school system consisting of a group of pupils composed of one or more grade groups, organized as one unit with one or more teachers to give instruction of a defined type, and housed in a school plant of one or more buildings. More than one school may be housed in a school plant, as is the case when the elementary and secondary programs are housed in the same school plant, i.e., combined elementary and secondary schools."

Data from the National Center for Education Statistics are based on censuses of elementary and secondary schools and are subject to nonsampling error. For a discussion of the methodological details, see the source.

**Items C426-458. Enrollment in elementary and secondary schools—public and nonpublic, selected years, 1969-1984.**

Source: Items C426-443 and C453-458: National Education Association, Washington, DC, *Estimates of School Statistics*, annual (copyright); items C444-452: U.S. National Center for Education Statistics, "Private School Universe" survey, special tabulation.

The National Education Association defines elementary schools as including grades kindergarten through 6 and secondary schools as including grades 7 through 12. For nonpublic school data (items C444-452), elementary schools include middle schools and secondary schools include vocational and technical schools. For the National Center for Education Statistics' definition of a school, see the text for items C418-425.

Data from the National Education Association are collected independently and separately from data collected by the National Center for Education Statistics and other Federal Government agencies. Due to differences in scheduling and frequency of revisions, data published by the National Education Association and the National Center for Education Statistics are rarely identical.

Data for enrollment in schools represent enrollment as of fall of the school year shown.

Average daily attendance (items C453-455) is the aggregate days the pupils were actually present in school divided by the number of days school was actually in session. In the 1983-1984 school year, average daily attendance was 92.8 percent of fall enrollment as shown here. Revised data indicate the figure is 92.3.

Average daily membership (items C456-458) is an average obtained by dividing the aggregate days of membership by the number of days in which schools were in session. This unit of measurement is not used uniformly throughout the country.

**Items C459-462. Federal grants to State and local governments for education, 1984.**

Source: U.S. Bureau of the Census, *Federal Expenditures to States for Fiscal Year 1984*.

The data include expenditures by the Department of Education and Office of Elementary and Secondary Education. Expenditures for elementary and secondary education include funds for compensatory education for the disadvantaged, Indian education, libraries and learning technologies, school assistance in federally affected areas, special programs and populations, and other elementary and secondary education.

Grants represent actual cost outlays or payments made during the fiscal year and include payments for grants-in-kind, payments to organizations that redistribute at the State or local level, and shared revenues.

**Items C463-465. Adult basic education programs, 1980.**

Source: U.S. National Center for Education Statistics, *Digest of Education Statistics*, annual, and unpublished data.

Statistics for State-administered adult education programs are for the fiscal year 1980 and cover adult basic and secondary education programs. Expenditure data include carryover funds from previous years.

**Items C466-498. Revenue receipts and expenditures of public elementary and secondary schools, selected years, 1975-1984.**

Source: Items C466-496: National Education Association, Washington, DC, *Estimates of School Statistics*, annual (copyright); items C497 and C498: U.S. National Center for Education Statistics, *Digest of Education Statistics*, annual.

Revenue and expenditure statistics and data for public school teachers cover the school year ending in June. Revenue receipts are additions to assets that do not incur obligations that must be met at some future date and do not represent exchanges of property for money. Assets must be available for expenditures. Current expenditures include expenditures for administration by county and other administrative units, State boards and departments of education (including vocational rehabilitation and salaries for personnel providing supplementary services), and

total current expenditures by local school districts and direct State expenditures for current operations.

Data from the National Education Association on classroom teachers' salaries (items C493 and C494) are revised periodically by the Association. Teachers at the elementary and secondary school levels, as presented here, include grades kindergarten through 6 and 7 through 12, respectively. Data for nonpublic school teachers are as of fall for the school year shown.

**Items C499-502: High School Graduates—public, 1975-1976 and 1982-1983; and private, 1975-1976 and 1979-1980.**

Source: U.S. National Center for Education Statistics, *Digest of Education Statistics*, annual, and unpublished data.

Data for public high school graduates include graduates of regular day school programs but exclude other programs. The data also exclude about 7,000 graduates of subcollegiate departments of institutions of higher education, Federal schools for Indians and on Federal installations, and residential schools for exceptional children.

**Items C503-568. Institutions of higher education—number, enrollment, revenue, expenditures, funding, and earned degrees conferred, selected years, 1975-1984.**

Source: Items C503-505 and C509-517: U.S. National Center for Education Statistics (NCES), *Digest of Education Statistics*, annual; items C506-508: NCES, *Survey Characteristics of Colleges and Universities*, special tabulation; items C518-529: NCES, *Fall Enrollment in Higher Education*, annual, and unpublished data; items C530-553: U.S. National Center for Education Statistics, *Financial Statistics of Institutions of Higher Education*, annual; items C554-556: U.S. National Science Foundation, *Federal Support to Universities, Colleges, and Selected Nonprofit Institutions*, annual; items C557-568: U.S. National Center for Education Statistics, *Earned Degrees Conferred, 1974-1975 and 1981-1982*.

The data shown, except for Federal funds obligated for education to colleges and universities (items C554-556) from the National Science Foundation, are based upon censuses of institutions listed in U.S. National Center for Education Statistics, *Education Directory: Colleges and Universities* and are subject to non-sampling error. See the sources for methodological details. Data for items C554-556 are collected in the National Science Foundation's Survey of Federal Support to Universities, Colleges, and Selected Nonprofit Institutions. Figures represent funds obligated during the indicated fiscal year. For details, see the source.

**Items C569-572. Years of school completed, 1970 and 1980.**

Source: U.S. Bureau of the Census. Items C569 and C571: *1980 Census of Population and Housing*, Summary Tape File 3C; items C570 and C572: *1970 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC70-1-C1)

These data are based on a sample of the census that was conducted by the Bureau of the Census as of April 1, 1970 and 1980. Persons whose education was received in a foreign school system or an ungraded school were instructed to report the approximate equivalent in the regular American school system. Persons who were currently attending or did not finish the highest grade were tabulated as having completed the previous grade or year.

## CRIME

**Items C573-617. Serious crimes known to police—number, percent change and distribution, violent and property crimes, and rate, 1980-1983; and police officers, 1983.**

Source: U.S. Federal Bureau of Investigation, *Crime in the United States*, annual.

For a discussion of crime statistics, see the text for items A122-129.

Because some law enforcement agencies do not provide data for all 12 months of a given year, estimated crime counts for such agencies are used. Using the known crime experiences of similar areas within a State, the estimates are computed by assigning the same proportional crime volumes to nonreporting agencies. For 1982, U.S. totals have been adjusted.

Data for police officers (items C616 and C617) include full-time State and highway patrol employees; they exclude civilians. The data are based on reports from 12,306 agencies.

**Items C618-632. Criminal justice system of State and local governments, 1983.**

Source: U.S. Bureau of the Census, *Public Employment in 1983*, and *Government Finances in 1982-83*, series GF No. 5; items C625 and C632: Unpublished data.

For discussions of full-time equivalent employment and government expenditures, see the text for items A213-215 and A216-231, respectively.

Police protection (item C623) includes all activities concerned with the enforcement of law and order, including coroners' offices, police training academies, investigation bureaus, and local jails, "lockups," or other detention facilities not intended to serve as correctional facilities.

Correction (item C624) includes activities pertaining to the confinement and correction of adults and minors convicted of criminal offenses. Pardon, probation, and parole activities are also included.

Judicial and legal (item C625) include courts and court-related activities (except probation and parole activities that are included at the correction function), court activities of sheriffs' offices, prosecuting attorneys' and public-defender offices, legal departments, and attorneys providing governmentwide legal services.

**Items C633-662. Prisoners under sentence of death and number of executions, 1984; Federal and State prisoners, 1980 and 1982-1984; State correctional facilities, 1984; juvenile custody facilities, 1982; jails, 1983.**

Source: Items C633 and C634: U.S. Bureau of Justice Statistics, *Capital Punishment*, 1984; items C635-641: U.S. Bureau of Justice Statistics, *Prisoners in State and Federal Institutions on December 31*, annual; items C642-648: U.S. Bureau of Justice Statistics, *State Correctional Facilities Census*; items C649-654: U.S. Bureau of Justice Statistics, *The 1983 Jail Census*; items C655-662: U.S. Office of Juvenile Justice and Delinquency Prevention, *Children in Custody: Advance Report on the 1982 Census of Public Juvenile Facilities*.

Data on persons under sentence of death (item C633) are collected annually for the Bureau of Justice Statistics as part of the National Prisoner Statistics Program. Data are obtained from the departments of corrections in each of the 50 States and the District of Columbia. The following States and the District of Columbia did not have the death penalty as of December 31, 1983: Alaska, Hawaii, Iowa, Kansas, Maine, Michigan, Minnesota, North Dakota, Oregon, Rhode Island, West Virginia, and Wisconsin. The data exclude prisoners under sentence of death who remained within local correctional systems pending exhaustion of appellate process or who had not been committed to prison.

Data on number of executions (item C634) are for persons executed under crime authority. Five persons were executed in 1983, bringing to 11 the total executed since the reinstatement of capital punishment in 1972. The increase in the pace of executions come as many inmates on death row neared the end of a series of appeals and as the courts became increasingly reluctant to sanction a lengthy appeals process in capital-punishment cases.

Data on Federal and State prisoners (items C635-641) were collected by the Bureau of Justice Statistics. Adults convicted of criminal activity may be given a prison or jail sentence. The data represent all persons under jurisdiction of Federal and State authorities rather than those in custody of those authorities.

State correctional facilities (items C642-648) are often classified by the level of security. To a large degree, housing consists of open dormitories. Maximum- or close-security prisons (item C645) are typically surrounded by a double fence or wall (usually 18 to 25 feet high) with armed guards in observation towers. Such facilities usually have large interior cell blocks for inmate housing areas.

A jail (items C649-654) is defined as a locally administered confinement facility, intended primarily for adults but sometimes also detaining juveniles, that holds persons pending adjudication and/or persons committed after adjudication, usually of a year or less. The 1983 National Jail Census was authorized by the Omnibus Crime Control Safe Streets Act of 1968, as amended (42 U.S.C. 3732), to assess the needs of the Nation's jails. The census was conducted for the Bureau of Justice Statistics by the Bureau of the Census. The criteria for inclusion in the census follow: Local jails that held inmates beyond arraignment, usually more than 48 hours, and that were administered and staffed by local officials, usually city or county employees. Specifically excluded from the count were federally administered jails, State-administered jails, privately operated facilities, and the

combined jail-prison systems in Connecticut, Delaware, Hawaii, Rhode Island, and Vermont.

A juvenile custody facility (items C655-662) is a building or part thereof, set of buildings or structures, operated for the custody and/or treatment of adjudicated and committed persons, or persons subject to juvenile or criminal justice proceedings. A juvenile is a person charged with an offense over whom the juvenile court has original jurisdiction. The juvenile court's jurisdiction is determined by the age of the person who, in most States, must be under 18 years of age.

## HOUSING

### Items C663-692. Housing—selected characteristics, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing*. Items C663-666, C678-680, and C687-690: Summary Tape File 1C; items C667-672, C674-677, C681-686, C691, and C692: Summary Tape File 3C; item C673: Unpublished data.

For discussions of total housing units, total year-round units, percent vacant, occupied units, house heating fuel, owner-occupied units, median value, and median gross rent, see the text for items A136-151. All information that follows was obtained from the sample questionnaire, except plumbing (item C679) is based on a complete count.

Data for units in structure (items C667-669) represent the number of housing units in the structure in which the unit is located. The number of units in structure includes all housing units whether occupied or vacant but excludes group quarters or businesses. The statistics are presented in terms of the number of housing units in structures of specified types and sizes, not in terms of the number of structures with housing units. A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof. Data for mobile homes (item C669) include both occupied and vacant mobile homes to which no permanent rooms have been added. If only a porch or shed has been added, the unit is counted in this category.

Year structure built (items C670-672) represents the year the original construction of the building was completed, not the date of any later remodeling, addition, or conversion. This item was ascertained for occupied and vacant housing units. For mobile homes, trailers, and houseboats, the manufacturer's model year is assumed to be the year built. The figures show the number of units in structures built during the specified periods and still in existence at the time of the census.

Air conditioning (item C674) is the presence of equipment with a refrigeration unit to cool air in occupied and vacant housing units. Evaporative coolers and fans or blowers not connected to a refrigerating apparatus are excluded, but refrigerating heat pumps are included.

Data for central heating system (item C675) include steam or hot water systems, central warm-air furnaces, electric heat pumps, other built-in electric units, and floor, wall, or pipeless furnaces.

A public sewer (item C676) is one connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. It may be operated by a government body or by a private organization. Small sewage treatment plants called "neighborhood septic tanks" in some localities are classified as public sewers. All units in structures with five or more units are assumed to be connected to a public sewer.

Source of water (item C677) represents the source of the water used by the occupants or intended occupants of the housing unit, ascertained for occupied and vacant housing units. The data include public systems or private companies; individual wells; and other sources, such as springs, creeks, rivers, ponds, lakes, cisterns, or other sources not listed.

Lacking complete plumbing facilities for exclusive use (item C679) includes those housing units with complete plumbing but also used by another household; some but not all plumbing facilities; and no plumbing facilities. Complete plumbing facilities include the presence of piped hot and cold water, a flush toilet, and a bathtub or shower.

Selected owner costs (item C691) represent the sum of payments for real estate taxes, fire and hazard insurance, utilities, fuels, and mortgage. Data are shown for "specified owner-occupied" units (i.e., one-family houses on less than 10 acres without a commercial establishment or medical office on the property). They exclude owner-occupied condominiums, mobile homes, and trailers. Only selected monthly owner costs are included, since payments for maintenance and repair are excluded.

## GEOGRAPHY AND ENVIRONMENT

**Items C693-712. Land area and use—total, federally owned, and non-Federal, 1982; and urban land area, 1980.**

Source: Items C693-709: U.S. Department of Agriculture, Soil Conservation Service, and Iowa State University Statistical Laboratory, *Basic Statistics, 1982 National Resources Inventory* (forthcoming); items C710-712: U.S. Department of Agriculture, Economic Research Service, *Expansion of Urban Area in the United States, 1960-1980*.

Land area is based on U.S. Bureau of the Census data and adjusted for (1) new water bodies greater than 40 acres in size and (2) changes in Federal ownership.

Cropland represents land used to produce adapted crops for harvest, either alone or with grasses and legumes. Pastureland covers lands producing forage plants, mainly, species introduced for animal consumption. Rangeland is land on which the potential or natural vegetation climax species are predominantly grasses, grass-like plants, forbs, or shrubs. Forest land is land with at least a 25-percent tree canopy cover or land at least 10 percent stocked by forest trees of any size, including land formerly having such tree cover and suitable for natural or artificial reforestation.

Urban and built-up land areas cover land used for residences, industrial sites, commercial sites, construction sites, railroad

yards, small parks of less than 10 acres within urban and built-up areas, cemeteries, airports, golf courses, sanitary land fills, sewage-treatment plants, water-control structures and spillways, shooting ranges, and so forth. Rural transportation is land used for roads and railroads in rural areas. Small water areas include water areas of less than 40 acres and streams of less than one-eighth of a mile wide.

Data presented here for urban land area (items C710-712) were developed by the USDA, using data from the 1980 Census of Population. The data account for all places classified as urban in the census (i.e., urbanized areas and places of 2,500 or more inhabitants outside urbanized areas). The data were developed primarily for use in computing population densities rather than as measures of the urban area per se. For a definition of urbanized area, see "Geographic Concepts and Codes."

See also the text for items C1-4.

**Items C713-740. Public land, 1980, 1983, and 1984; water withdrawn and consumed, 1980; air-pollutant emissions, 1982; and pollution abatement capital expenditures, 1983.**

Source: Items C713-715: U.S. National Park Service, *National Park Statistical Abstract, 1983*; items C716 and C717: U.S. National Forest Service, *Land Areas of the National Forest System, As of September 30, 1984*, and unpublished data; items C718 and C719: National Association of State Park Directors, Indianapolis, IN, *Annual Information Exchange*; items C720-727: U.S. Geological Survey, *Estimated Use of Water in the United States in 1980*, Circular 1001; items C728-737: U.S. Environmental Protection Agency, unpublished data from the National Emissions Data System; and items C738-740: U.S. Bureau of the Census, *Current Industrial Reports, Pollution Abatement Costs and Expenditures, 1983* (series MA-200(83)-1).

Data for the National Park System (items C713 and C714) were obtained from visitor records; a visit is considered the entry of any person, except National Park Service personnel, onto lands or waters administered by the National Park Service. For parks that cross State lines, the count of visits is determined by the number of persons entering the park in each State. If only one entrance exists, the entire number of visits is allocated to the State in which the entrance exists. Data for State park and recreation areas (items C718 and C719) include all major agencies that administer parks, recreation areas, historic sites, parkways, and related types of areas.

Water use (items C720-725) refers to water that is taken from a ground water or surface water source and is conveyed to the place of use such as for public supply, rural domestic and livestock purposes, irrigation, and self-supplied industrial uses. Water consumption (items C726 and C727) refers to that part of the water withdrawn that is no longer available as a result of evaporation, incorporation into products and crops, and consumption by man or animals.

Air pollutants (items C728-737) are airborne substances, including particulates (dust, fly ash, smoke), sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons, and other air pollutants.

Data for pollution abatement by manufacturers (items C738-740) are based on a probability sample of 20,000 manufacturing establishments with 20 or more employees selected as a sample of the 1980 Annual Survey of Manufactures, conducted by the Bureau of the Census. Pollution abatement means the reduction or elimination of pollutants emitted from the establishment and includes prevention, treatment, and recycling activities.

## LABOR, EMPLOYMENT, AND EARNINGS

**Items C741-783. Civilian labor force—selected characteristics, selected years, 1975-1984.**

Source: U.S. Bureau of Labor Statistics, *Geographic Profile of Employment and Unemployment*, annual; and unpublished data.

The civilian labor force comprises all civilians classified as employed or unemployed in accordance with the criteria described below.

The civilian employed are all civilians who did any work as paid employees or in their own business during the survey week or who worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, a strike, or personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs.

The unemployed are all civilians who did not work during the survey week, were available for work during the survey week (except for temporary illness), and made specific efforts to find a job in the prior 4 weeks. Persons waiting to be recalled to a job from which they had been laid off and those waiting to report to a new job within the next 30 days are also counted as unemployed.

For details on how the data were derived, see the source.

**Items C784-825. Nonagricultural employment—selected characteristics, selected years, 1975-1984; average annual pay, 1980, 1982, and 1983; and production workers—average hourly earnings, 1980 and 1982-1984.**

Source: U.S. Bureau of Labor Statistics. Items C784-806 and C822-825: *Employment and Earnings*, annual, and supplements; items C807-821: *Bureau of Labor Statistics Bulletin* (USDL 82-460 and 84-378), 1983 data preliminary.

These data were obtained from establishment reports and refer to persons on establishment payrolls who received pay for any part of the pay period that included the 12th of the month. See the source for methodological details. Industry statistics are classified in accordance with the 1972 *SIC Manual*. For a discussion of the SIC and the manufacturing industry, see the general note for items A232-244. For discussions of wholesale trade, retail trade, and services, see the general notes for items A245-252, A253-282, and A283-292, respectively. Figures for government pertain to activities uniquely governmental that cut across industry lines. The transportation, communications, and

public utilities division consists of establishments that provide passenger and freight transportation, communication services; electricity, gas, steam, water, or sanitary services; and the U.S. Postal Service. Data are also presented for mining; construction; and finance, insurance, and real estate establishments.

Average annual pay (items C807-821) was computed by dividing total annual payrolls of employers covered by unemployment insurance programs by average monthly employment for these employers. Included in the annual payroll data are bonuses, the cash value of meals and lodging when supplied, and tips and other gratuities. Average annual pay only approximates annual earnings because an individual may not be employed by the same employer all year or may work for more than one employer.

Production and related workers (items C822-825) include working supervisors and all nonsupervisory workers (including group leaders and trainees) engaged in fabricating, processing, assembling, inspecting, receiving, storage, handling, packing, warehousing, shipping, trucking, hauling, maintenance, repair, janitorial, guard services, product development, auxiliary production of plant's own use (e.g., power plant), recordkeeping, and other services closely associated with the above production operations.

Average hourly earnings are on a gross basis. They reflect not only changes in basic hourly and incentive wage rates but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. They also reflect shifts in the number of employees between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments. Earnings are the actual return to the worker for a stated period of time. This makes them different from wage rates, which are the amount stipulated for a given unit of work or time. The earnings series do not measure the level of total labor costs on the part of the employer since the following are excluded: Irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings for those employees not covered under the production worker, construction worker, or nonsupervisory employee definitions.

The sums of the region, division, and State totals may differ from the U.S. totals because some States have more recent benchmarks than others and because of the effects of differing industrial and geographic stratification.

**Items C826-841. Private nonfarm employment and payroll—employees and annual payroll, 1980-1982.**

Source: U.S. Bureau of the Census, *County Business Patterns*, annual.

For a discussion of private nonfarm employment, see the text for items A195-204.

## INCOME

**Items C842-903. Personal income—in current and constant dollars, selected years, 1970-1984; and disposable income, selected years, 1970-1984.**

Source: U.S. Bureau of Economic Analysis, *Survey of Current Business*, April and August issues.

For a discussion of personal income, see the text for items A169-184.

U.S. totals for personal income and per capita income shown in this table and in table A may differ since revisions to State data precede those to county data. Also, national totals include Federal military and civilian personnel stationed abroad and U.S. residents employed by private U.S. firms on temporary foreign assignment. The State and county estimates include only persons working and/or residing in the 50 States and the District of Columbia. Percent change represents simple percent change over the period indicated. The population figures used to calculate the per capita income data were supplied by the Bureau of Economic Analysis. The personal consumption expenditure deflator was used to convert current dollar figures into constant (1972) dollars.

**Items C904-935. Money income—selected characteristics, 1969, 1979, and 1983.**

Source: U.S. Bureau of the Census. Items C904, C907, C910, C913, C916, C919, C924-926, and C930-932: *1980 Census of Population and Housing, Summary Tape File 3C*; items C905, C908, C911, C914, C917, C920, C927-929, and C933-935: *1970 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC70-1-A); items C906, C909, C922, and C923: Unpublished data; items C912, C915, C918, and C921: *Current Population Reports*, series P-26, Nos. 84-1-SC to 84-50-SC.

For a discussion of money income and poverty, see the text for items A157-168.

Median family income (items C904-906) is based on total money income received in calendar year 1979 by all family members 15 years old and over, tabulated for all families. Family income differs from household income (items C907-911) by excluding income received by household members not related to the householder, persons living alone, and others in nonfamily households.

Per capita money income (items C912-923) is based on resident population enumerated as of April 1, 1970 and 1980, for 1969 and 1979 and estimated July 1 for 1981.

Items expressed in constant-dollar terms were deflated by using the Consumer Price Index from the Bureau of Labor Statistics for all items.

**Items C936-940. Wealthholders—number, rate per 100,000 persons, assets, and millionaires, 1982.**

Source: U.S. Internal Revenue Service, *Statistics of Income Bulletin*, winter 1984-85.

Estimates of wealth were derived using the "estate multiplier technique," which utilizes estate tax returns. Gross assets, the measure used to determine top wealthholders, reflects the gross

value of all assets, including the full face value of life insurance reduced by all policy loans but before any reduction for indebtedness. Net worth, another measure of wealth, reflects the level of wealth, including the cash value of life insurance after all debts have been removed.

## FEDERAL GOVERNMENT

**Items C941-953. Federal funds and grants—direct expenditures, 1982-1984.**

Source: U.S. Bureau of the Census, *Federal Expenditures by State for Fiscal Year*, annual.

The Consolidated Federal Funds Report (CFFR) is a presentation of Federal Government expenditures or obligations in State, county, and subcounty areas of the United States. The data for this report were obtained from reporting systems that exist in various Federal Government agencies. These data have been consolidated and tabulated in a standard format for presentation in a series of publications covering different levels of geographic detail. These publications follow: (1) *Federal Expenditures by State for Fiscal Year 1984*; *Consolidated Federal Funds Report, Fiscal Year 1984*, Vol. I, *County Areas*; and *Consolidated Federal Funds Report, Fiscal Year 1984*, Vol. II, *Subcounty Areas*.

The publication *Federal Expenditures by State for Fiscal Year 1984* presents State-by-State distributions of Federal Government expenditures. Data in that publication are the same that appear in the CFFR, with the exception of amounts for Federal grants to State and local governments. In the CFFR, Federal grants generally represent obligations and include payments to State and local governments and grants to nongovernmental recipients. In *Federal Expenditures by State*, grants to State and local governments represent actual expenditures of the Federal Government. For further discussion, see the text for items A207-212.

**Items C954-966. Federal Government employees and earnings, 1980-1983.**

Source: U.S. Bureau of Economic Analysis, *Local Area Personal Income, 1978-83*, vol. 1.

For a discussion of Federal Government employment, see the text for items A205 and A206; and for Federal Government earnings, see the text for items A169-184.

**Items C967-977. Individual income and employment taxes, 1970, 1980, and 1984; and Federal individual income tax returns, 1983.**

Source: Internal Revenue Service. Items C967-972: *Annual Report of the Commissioner*; items C973-977: *Statistics of Income, Individual Income Tax Returns, 1983*.

Individual income and employment taxes (items C967-972) do not necessarily indicate the tax burden in each State since taxes may be collected in one State from residents of another State.

Federal individual income tax returns data (items C973-977) are estimates based on a sample of returns, selected before audit, and represent coverage of forms 1040 and 1040A filed by taxpayers for the calendar years indicated. A discussion of the methodology used appears in the source. Adjusted gross income represents income from sources subject to tax, less certain exclusions, such as necessary expenses of operating a business, employee business and moving expenses, and contributions to a retirement fund by the self-employed.

## STATE AND LOCAL GOVERNMENTS

### Items C978-1091. General note.

The financial statistics relate to governmental fiscal years that ended June 30, 1983, or at some date within the 12 previous months. The following governments are excepted and are included as though they were part of the June 30 group: Alabama, Michigan, the District of Columbia, and Alabama school districts, ending September 30; New York, ending March 31; and Texas and its school districts, ending August 31.

### Items C978-991. State and local government finances—general revenue, direct general expenditure, and debt outstanding, 1983; percent change, 1980-1983; and per capita, 1983.

Source: U.S. Bureau of the Census, *Governmental Finances*, annual.

For discussions of general revenue, direct general expenditure, and debt outstanding, see the text for items A216-231.

Data for 1983 general revenue and direct general expenditure have been revised since originally published.

### Items C992-1009. Federal aid to State and local governments, 1980, 1983, and 1984; and State general operating fund, 1983-1985.

Source: Items C992-1000, U.S. Bureau of the Census, *Federal Expenditure by State for Fiscal Year*, annual, and U.S. Department of the Treasury, *Federal Aid to States, 1980*; items C1001-1009: National Governors' Association and National Association of State Budget Officers, Washington, DC, *Fiscal Survey of the States*, annual (copyright).

All amounts on Federal Government grants to State and local governments (items C992-1000) represent actual cash outlays or payments made during the fiscal year. The data include the following: (1) Direct cash grants to State and local government units; (2) payments for grants-in-kind, such as purchases of commodities distributed to State or local governmental institutions (e.g., school-lunch programs); (3) payments to nongovernmental entities when such payments result in cash or in-kind services passed on to State or local governments; (4) payments to regional commissions and organizations that are redistributed at the State or local level; (5) payments to State and local governments for research and development that is an integral part of the provision of public services; and (6) shared revenues. The data ex-

clude Federal Government payments to individuals, profit or non-profit institutions not covered above, and payments for services rendered.

State general operating funds (items C1001-1009) support most ongoing broad-based State services, as opposed to long-term State capital projects, and are available for appropriation to support any governmental activity. These funds exclude special funds earmarked for particular purposes, such as highway trust funds, which are supported by fuel taxes and motor license fees.

The data provide actual year-end figures for fiscal year 1983 and estimates for fiscal years 1984 and 1985.

### Items C1010-1043. State government finances, 1980 and 1983; State tax collections, 1984; and State employment compensation systems, 1983.

Source: U.S. Bureau of the Census, *State Government Finances in 1980 and 1983* (series GF83, No. 3); and (for items C1031-1040) *State Tax Collections in 1984* (series GF84, No. 1).

Data for 1983 general revenue and direct general expenditure have been revised since originally published.

For discussions of general revenue, intergovernmental revenue, taxes, expenditure, direct general expenditure, and expenditure for education, health and hospitals, public welfare, highways, and debt outstanding, see the text for items A216-231.

General revenue from own sources (item C1012) includes taxes, charges, and miscellaneous general revenue. Intergovernmental transactions are not included.

Public safety at the State level (item C1023) includes police protection and correction, as well as inspection and regulation. Correction involves the confinement and correction of adults and minors convicted of offenses against the law, and pardon, probation, and parole activities.

Environment and housing (item C1024) include natural resources: State activities to conserve, promote, and develop agricultural, fish and game, and other water resources, including geological research, flood control, irrigation, drainage, and other conservation activities; and housing and renewal projects and regulation, promotion, and support of private and local government housing and renewal activities.

State tax collections (items C1031-1040) include local shares to State-imposed taxes. Excise taxes are as of the end of the fiscal year. For general sales and gross receipts under excise taxes (item C1038), data for the following States exclude State-collected supplemental local sales taxes imposed by local governments under State enabling legislation, as well as locally administered taxes: Alabama, Arizona, Arkansas, California, Colorado, Georgia, Illinois, Kansas, Kentucky, Minnesota, Missouri, Nebraska, Nevada, New Mexico, New York, North Carolina, Ohio, Oklahoma, South Dakota, Tennessee, Texas, Utah, Virginia, Wisconsin, and Wyoming. The data are preliminary.

### Items C1044-1073. Number of local governments and local government finances, 1982; and market value of locally assessed ordinary realty, 1981.

Source: U.S. Bureau of the Census. Items C1044-1048: 1982 *Census of Governments, Governmental Organization* (series GC82(1)); items C1049-1067: 1982 *Census of Governments, Compendium of Government Finances* (series GF82(4)-5); C1068-1073: 1982 *Census of Governments, Taxable Property Values and Assessment—Sales Price Ratios* (series GC82(2)).

The total number of local governments (item C1044) is as of the beginning of 1982 and includes general-purpose local governments (county, municipal, and township governments) and limited-purpose governments (school and special district governments).

Organized county governments (item C1046) are found throughout the Nation, except for Connecticut, Rhode Island, the District of Columbia, and limited portions of other States where certain county areas lack a distinct county government.

Special districts (item C1047) are independent, limited-purpose governmental units (other than school districts), which exist as separate entities with substantial administrative and fiscal independence from general-purpose local governments.

School districts (item C1048) are organized local entities providing public elementary, secondary, and/or higher education, which under State law have sufficient administrative and fiscal autonomy to qualify as separate governments.

For a discussion of local government finances, see the general note for items A213-231 and text for items A216-231.

Approximate market value of locally assessed ordinary realty (items C1068-1073) is based on information obtained from the 1982 Census of Governments Property Values Survey, conducted by the Bureau of the Census. The estimates show market value as indicated by measurable sales occurring generally between July 1 and December 31, 1981. The source report based its sample on publicly available records in recording and assessing offices and excluded sales of State-assessed property and locally assessed personal property. The sample sought "arm's length" transactions. These ideally consist of "ordinary" transfer between willing buyers and willing sellers not under duress. Only sales evidenced by warranty deeds or instruments of equivalent standing were included. Measurable sales include only those concerning which a buyer or other transacting party has responded. The sum of State data will not equal the U.S. total because of independent computations. See the source for details.

**Items C1074-1091. State and local government, full-time-equivalent employment and payroll, 1983.**

Source: U.S. Bureau of the Census, *Government Employment, Public Employment in 1983* (series GE83, No. 1).

Data for local governments are as of October and are based upon complete censuses of all State departments, agencies, and institutions and upon a random sample of approximately 20,000 local governmental units meeting certain population and other criteria. For a discussion of the methodology, see the source.

For a discussion of local government employment and payroll, see the text for items A213-215. For definitions of education,

health and hospitals, public welfare, and police and fire protection, see the text for items C216-231.

## BUSINESS

**Items C1092-1138. Proprietorships and partnerships, 1981; new incorporations and industrial and commercial firms, 1980-1983; Black-owned firms, 1982, and foreign-owned U.S. firms and non-farm employment, 1982.**

Source: Items C1092 and C1093: U.S. Internal Revenue Service, *Statistics of Income, Sole Proprietorship Income Tax Returns*, and *Statistics of Income, Corporation Income Tax Returns*; items C1094-1097: The Dun & Bradstreet, New York, NY, *Monthly New Business Incorporation Report*; items C1098-1109: The Dun & Bradstreet, *The Failure Record Through 1983* and *Monthly Failure Report*; items C1110-1113: U.S. Bureau of the Census, *1982 Survey of Minority-Owned Business Enterprises* (series MB82-1); items C1114-1126: Bureau of the Census, *Selected Characteristics of Foreign-Owned U.S. Firms: 1982*; items C1127-1138: Bureau of the Census, *1982 County Business Patterns*.

Proprietorship and partnership figures are estimates based on a sample of Federal income tax returns selected before audit. For a discussion of methodology, see the sources.

A business failure is defined as a concern that is involved in a court proceeding or a voluntary action that is likely to end in loss to creditors. All industrial and commercial enterprises that are petitioned into the Federal Bankruptcy Courts are included in the failure records. Also included are concerns that are forced out of business through such actions in the State courts as foreclosure, execution, and attachments with insufficient assets to cover all claims; concerns involved in court actions such as receivership, reorganization, or arrangement; voluntary discontinuances with known loss to creditors; and voluntary compromises with creditors out of court, where obtainable.

Black-owned firms data are based on the 1982 Survey of Minority-Owned Businesses, conducted by the Bureau of the Census, which provides basic economic data on businesses owned by Blacks. The survey is based on the whole firm rather than on establishments of a firm. For a discussion of methodology and industrial coverage, see the source.

Foreign-owned firms data were compiled from the Bureau of the Census 1982 Company Organization Survey. The data cover only firms operating at more than one U.S. location. A firm was defined as foreign owned if 10 percent or more of its equity was owned by a foreign entity. A firm was counted in each State in which it operated one or more establishments. Therefore, unduplicated counts of firms are not available for regions and divisions.

Data on nonfarm employment were obtained from the *County Business Patterns*. For a discussion of *County Business Patterns* data, employment, and annual payroll, see the text for items A195-204. For a definition of establishments, see the text for items A232 and A233.

## SCIENCE

**Items C1139-1153.** Federal obligations for research, development and plant, industrial research and development funds, and scientists and engineers, selected years, 1975-1982.

Source: U.S. National Science Foundation. Items C1139-1145: *Federal Funds for Research and Development: Fiscal Years 1983, 1984, and 1985*; items C1146-1151: *Research and Development in Industry*, annual; items C1152 and C1153: *U.S. Scientists and Engineers*, NSF84-321.

Federal obligations for research, development, and plant data (items C1139-1151) were obtained from the Annual Survey of Federal Funds for Research and Development (R&D), conducted by the National Science Foundation. Federal obligations represent the amounts for orders placed, contracts awarded, services received, and similar transactions during a given period, regardless of when funds were appropriated and when future payment of money is required. Research is defined as a systematic study directed toward fuller scientific knowledge or understanding of the subject studied. Development represents the systematic use of the knowledge or understanding gained from research, directed toward the production of useful materials, devices, systems, or methods, including design and development of prototypes and processes. R&D plant (research and development facilities and fixed equipment, such as reactors, wind tunnels, and radio telescopes) include acquisition of, construction of, major repairs to, or alterations in structures, works, equipment, facilities, or land for use in R&D activities at Federal or non-Federal installations. R&D plant excludes expendable equipment and office furniture and equipment.

Data for industrial research and development funds were obtained from the Annual Survey of Industrial Research and Development that is conducted by the Bureau of the Census for the National Science Foundation. Funds for industrial research and development represent operating expenses incurred by a company in the conduct of research and development in its own laboratories or other company-owned or -operated facilities. The figures include wages and salaries, materials and supplies consumed, property and other taxes, maintenance and repairs, depreciation, and an appropriate share of overhead. Capital expenditures are excluded. All funds shown for R&D are in current rather than constant dollars. For methodology, see the sources.

Data presented for scientists and engineers (items C1152 and C1153) are estimates from the 1982 Postcensal Survey of Scientists and Engineers, sponsored by the National Science Foundation and conducted by the Bureau of the Census. Data are provided for scientists and engineers who met certain prescribed educational, occupational, and labor force criteria (related to science or engineering) in the 1980 Decennial Census of Population and who then, in 1982, met the National Science Foundation's criteria for designation as a scientist or engineer. The total population of scientists and engineers is not represented here. Data from the survey are weighted to totals that would have been obtained if all members of this particular population had been surveyed.

## AGRICULTURE

**Items C1154-1283.** Farms—population, number and value, selected years, 1960-1984; balance sheet of farming sector, 1980, 1983, and 1984; farm income, 1980, 1982, and 1983; and crop and livestock production and value, 1980-1984.

Source: Items C1154-1158: U.S. Economic Research Service, *Farm Population Estimates, 1910-1970*, and U.S. Bureau of the Census, *1980 Census of Population, Characteristics of the Population, General Social and Economic Characteristics* (series PC80-1-C); items C1159-1170: U.S. Department of Agriculture, Statistical Reporting Service, *Farm Numbers, 1975-80* and *Crop Production* (August 1984 release); items C1171-1184: U.S. Economic Research Service, *Farm Real Estate Market Developments*, annual; items C1185-1238: U.S. Bureau of the Census, *Census of Agriculture, 1974, 1978, and 1982*; items C1239-1266: U.S. Economic Research Service, *Economic Indicators of the Farm Sector: State Income and Balance Sheet Statistics*, annual; items C1267-1283: Statistical Reporting Service, *Crop Production*, annual; *Field Crops—Production, Disposition, Value*, annual; *Agricultural Statistics, 1983*; and annual crop and livestock summaries.

Data presented here are from the U.S. Department of Agriculture or from the U.S. Bureau of the Census, which usually conducts a census of agriculture in 5-year cycles.

Over time, the definitions of a farm have varied. From 1959 to 1974, a farm was defined as any place of 10 or more acres that normally had annual sales of \$50 or more of agricultural products or any place of less than 10 acres that normally had annual sales of \$250 or more. In 1974, the definitions were revised to include any place as of June 1 from which \$1,000 or more of agricultural products would have been sold during the census year. Data from the 1974, 1978, and 1982 Censuses of Agriculture are based upon this revised definition. Data for 1975 to 1984 on number of farms and value are based upon the 1974 definition.

Farmland refers to all land under the control of a farm operator, including land not actually under cultivation or not used for pasture or grazing. Rent-free land is included as part of the farm only if the operator has sole use of it. Land that is used for pasture or grazing on a per-head basis and neither owned nor leased by the farm operator is not included, except for grazing lands that are controlled by grazing associations and leased on a per-acre basis. Data for value of farmland and buildings (USDA) are not available for Alaska and Hawaii and thus are not included in the U.S. totals.

Gross income comprises cash receipts from farm marketings of crops and livestock, Federal payments made directly to farmers for farm-related activities, rental value of farm homes, values of farm products consumed in farm homes, and other farm-related income, such as machine hire and customer work. Farm marketings represent agricultural products sold by farmers multiplied by prices received per unit of production at the local market. Government payments to farmers are payments made

directly to farmers in connection with farm programs. Figures on net farm income include farm household income. The farm household accounts affect both the income and expenses in net farm income. The imputed rental value of farm-operator dwellings is included as income. The expenses for these dwellings are included in repair and operation, interest, taxes, capital consumption, and other miscellaneous expenses. In the net farm income accounts, Commodity Credit Corporation loans are counted as sales at the time the loan is made and the quantities under loan are not counted in inventory calculations.

Information on prices received for farm products (used to determine farm value of various types) is currently obtained by the Statistical Reporting Service Crop Reporting Board from surveys of firms (such as grain elevators, packers, and processors) purchasing agricultural commodities directly from producers. In some cases, the price information is obtained directly from the producers. Season average prices received by farmers are calculated by weighting monthly prices by monthly sales during the crop marketing season, beginning with the first month in which a particular crop harvest begins.

Estimates of crop acreage and production by the Statistical Reporting Service are based on current sample survey data obtained from individual reporters and objective yield counts, reports of carlot shipments, market records, personal field observations by field statisticians, and reports from other sources.

Annual inventory numbers of livestock and estimates of livestock, dairy, and poultry production prepared by the Department of Agriculture are based on information from farmers and ranchers obtained by probability survey sampling methods.

## MINERALS

**Items C1284-1318. Mineral industries, 1982; production, 1975 and 1980-1982; and fuels, 1983.**

Source: Items C1284-1300: U.S. Bureau of the Census, *1977 Census of Mineral Industries, General Summary*, and *1982 State Summary*; items C1301-1309: Bureau of the Census, compiled from data from U.S. Bureau of Mines and U.S. Energy Information Administration; items C1310-1318: Energy Information Administration, *U.S. Crude Oil, Natural Gas, and Natural Gas Liquids Reserves, 1983 Annual Report*, DOE/EIA-1216(83); *Coal Production, 1983*, DOE/EIA-0118(83)/1; *Natural Gas Monthly*, Oct. 1984, DOE/EIA-0130(84); *Coal Data: A Reference*, Jan. 1985, DOE/EIA-0064 (84); also, Independent Petroleum Association of America, Washington, DC, *Petroleum Independent, The Oil and Gas Producing Industry in Your State*, 1984.

The mineral industries include all establishments primarily engaged in mining. In the broad sense, mining includes the extraction of minerals occurring naturally: Solids, such as coal and ores; liquids, such as crude petroleum; and gases, such as natural gas. The establishments in the 1982 Census of Mineral Industries were classified according to the *1972 SIC Manual* and its 1977 supplement; for discussion, see the general note for items A232-244.

Mineral production value figures from the U.S. Bureau of Mines and mineral fuels data from the Energy Information Administra-

tion were obtained from or based on several sources. For details, see the sources cited above.

Proved reserves (items C1316 and C1317) are the estimated quantities that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Demonstrated reserve base of coal (item C1318) is a collective term for the categories of reliability that represent 100 percent of the coal in these categories in place as of a certain date. It represents that portion of identified coal resource from which reserves are calculated.

## TIMBER AND FISHERIES

**Items C1319-1322. Timber-based manufacturing industries—employees and payroll, 1982.**

Source: U.S. Bureau of the Census, *1982 Census of Manufactures, Summary and Subject Statistics and Geographic Area Statistics* (series MC82-SR and MC82-A).

Data for timber-based industries were obtained from the 1982 Census of Manufactures. The data cover operating manufacturing establishments as defined in the *1972 SIC Manual*. For discussions of the census of manufactures and the *SIC Manual*, see the general note for items A232-244. For definitions of employees and payroll, see the text for items A232-244.

For items C1319 and C1320, Alabama excludes furniture and fixtures that have a range of 2,500 or more employees. Alaska has lumber and wood products only; paper and allied products have a range of 1,000 to 2,499 employees; furniture and fixtures are excluded. The District of Columbia has paper and allied products only that have a range of 250 to 499 employees. Massachusetts, New Jersey, and New York exclude lumber and wood products that have a range of 2,500 or more employees. Montana excludes paper and allied products that have a range of 500 to 599 employees. Nevada, New Mexico, and North Dakota exclude paper and allied products. Rhode Island excludes furniture and fixtures that have a range of 1,000 to 2,499 employees. South Dakota has lumber and wood products only and excludes furniture and fixtures. In South Dakota, paper and allied products have a range of 150 to 249 employees. Wyoming has lumber and wood products only that have a range of 500 to 999 employees.

For items C1321 and C1322, Alabama, Louisiana, and Rhode Island exclude furniture and fixtures. Alaska, South Dakota, and Wyoming have lumber and wood products only. The District of Columbia has paper and allied products only. Massachusetts, New Jersey, and New York exclude lumber and wood products. Montana, Nevada, New Mexico, and North Dakota exclude paper and allied products.

**Items C1323-1334. Fisheries—selected characteristics, 1980, 1982, and 1983.**

Source: U.S. National Oceanic and Atmospheric Administration, *Fisheries of the United States*, annual.

Data for fisheries were collected by regional offices of the National Marine Fisheries Service of the National Oceanic and Atmospheric Administration, in cooperation with various States. Quantity of catch is shown in round or live weight (mollusk-shells excluded). The exvessel value of the U.S. domestic catch is calculated using the price received at the dock for fish, shellfish, etc. In 1980, a partial survey was conducted for fisheries plants for some States in the Midwest, South, and West regions.

## CONSTRUCTION AND HOUSING

### Items C1335-1356. Construction industries, 1982; and value of construction contracts, 1981-1983.

Source: Items C1335-1348: U.S. Bureau of the Census, 1982 *Census of Construction Industries* (series CC82); items C1349-1356: F.W. Dodge Division, McGraw Hill Information Systems Company, New York, NY, figures reported currently in *Dodge Construction Potentials*.

Statistics for construction industries (items C1335-1348) were obtained from the 1982 Census of Construction Industries. A census is conducted by the Bureau of the Census every 5 years for years ending in 2 and 7. The census covers all employer establishments (establishments with payroll) primarily engaged in contract construction (general contractors or special trade contractors), construction for sale of their own account (operative builders), or subdividing real property into lots (subdividers and developers, except cemeteries) as defined in the 1972 *SIC Manual*. For discussion of the 1972 *SIC Manual*, see the general note for items A232-244; for a definition of establishments, see the text for items A232 and A233. The aggregate of construction receipts reported by all construction establishments in each of the several industry or other groupings in the census contains varying amounts of duplication since the construction work (and the receipts) of one firm may be subcontracted to other construction firms and also be included in the other firm's receipts. To eliminate this duplication, a "net construction receipts" figure was derived for each establishment by subtracting the payments made for construction work subcontracted to others from the total construction receipts. Value added is equal to all business receipts less payments for construction work subcontracted by others and payments for materials, components, supplies, and fuels. For methodological details concerning the censuses, see the source.

Figures for construction contracts (items C1349-1356) represent the value of construction in the State in which the work was actually performed.

### Items C1357-1368. New private housing units authorized by building permits, 1982-1984; and new privately owned housing units started, 1981-1984.

Source: Items C1357-1364: U.S. Bureau of the Census, *Housing Units Authorized by Building Permits and Public Contracts, Construction Reports* (series C40), annual, except items

C1357-1360, Dec. 1984; items C1365-1368: National Association of Home Builders, Economics Division, Washington, DC, *Historical State Housing Starts, 1967-1984* (copyright).

For a discussion of new private housing units authorized by building permits, see the text for items A130-135.

All numbers shown for housing starts (items C1365-1368) have been revised from previous estimates. The new estimates were derived by disaggregating regional housing starts from the Bureau of the Census' *Construction Reports* (series C20). The aggregation factors were formulated by analyzing State building permit figures and making adjustments for nonpermit starts, changes in population, changes in employment, and other relevant factors.

## MANUFACTURES

### Items C1369-1418. Manufactures—selected characteristics, selected years, 1977-1983; manufacturing earnings, 1981-1984.

Source: Items C1369-1398: U.S. Bureau of the Census, 1977 and 1982 *Census of Manufactures, Geographic Area Statistics* (series MC77-A and MC82-A); items C1399-1407, Bureau of the Census, *Annual Survey of Manufactures, Geographic Area Series* (series M83(AS)-6); items C1408-1411: Bureau of the Census, 1981 *Origin of Exports of Manufactured Products* (series M81(AS)-5); items C1412-1418: U.S. Bureau of Economic Analysis, *Survey of Current Business*, August 1985, except 1981, unpublished data.

For methodological details, coverage, and discussion of data obtained from the census of manufactures, see the general note and specific text for items A232-244.

The Annual Survey of Manufactures (ASM), conducted initially in 1949, collects data for the years between censuses for the more general measures of manufacturing activity covered in detail by the censuses. The ASM data are estimates derived from a probability sample of establishments.

Data on export-related employment (items C1408-1411) represents employment directly calculated for the plants shipping the exported product, the supplying industries and service organizations, and the central administrative offices and auxiliaries. For manufacturing industries, employment is limited to paid employees in manufacturing plants. The export-related employment data shown do not include the jobs involved in the export of nonmanufactured goods and various services sold to foreign buyers. Thus, jobs in the manufacturing sector that relate to the export of nonmanufactured goods are excluded from the estimates. In addition, all of the indirect exports being reported are domestically produced, that is, they exclude imports.

## TRANSPORTATION

### Items C1419-1490. Land transportation—selected characteristics, selected years, 1970-1984.

Source: Items C1419-1424, C1432-1456, C1460-1467, C1472, and C1473: U.S. Federal Highway Administration (FHWA),

*Highway Statistics*, annual; items C1425-1428: U.S. Federal Highway Administration, *Federal Aid and Allied Highway Programs*, 1983; items C1429-1431: U.S. Federal Highway Administration, *Fifth Annual Report to Congress, Highway Bridge Replacement and Rehabilitation Program*, May 1984; items C1457-1459: U.S. Federal Highway Administration, *Drivers' Licenses*, 1983; items C1468-1471: R.L. Polk & Co., Motor Statistical Division, Dearborn, MI, *Polk Statistical Reports*; items C1474 and C1475: U.S. Bureau of the Census, *1982 Census of Transportation, Truck Inventory and Use* (series TC82-T-52); items C1476-1481: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. II, *Mortality*, annual, and unpublished data; items C1482-1485: U.S. National Highway Traffic Safety Administration, *Fatal Accident Reporting System Annual Report*; items C1486-1490: U.S. Bureau of the Census, *1980 Census of Population, U.S. Summary* (series PC80-1-C).

Effective July 1, 1976, a uniform road classification system was implemented, which shortened the mileage of the highway system and redefined the three main systems of Federal-aid routes. The system connects the Nation's principal metropolitan areas, cities, and industrial centers; serves the national defense; and connects at suitable border points with routes of continental importance. The Federal-aid primary system (items C1425 and C1426) consists of a network of main roads important to interstate, statewide, and regional travel. The system consists of main rural roads and their extensions into or through urban areas. The Federal-aid urban system (item C1427) is located in urban places of 5,000 or more persons and consists of major urban roads and streets, except those in the primary system.

The number of highway bridges (item C1429) represents bridges greater than or equal to 20 feet. The FHWA uses the National Bridge Inventory furnished by the States to identify structurally deficient and functionally obsolete bridges—the two general classifications of deficient bridges. Structurally deficient bridges (items C1430), as defined by the FHWA, are those (1) that have been restricted to light vehicles only, (2) that have been closed, or (3) that require immediate rehabilitation to remain open. Functionally obsolete bridges (item C1431) have deck geometry, load-carrying capacity, clearance, or approach roadway alignment that no longer meets the usual criteria for the system of which they are a part. Most structurally deficient bridges are functionally obsolete as well. However, they would only be counted as structurally deficient because this is the more critical category of the two. The fact that a bridge is "deficient," either structurally or functionally, does not imply that it is "unsafe." With proper load posting and enforcement, functionally obsolete bridges usually have geometric deficiencies that can be minimized by certain actions.

Statistics for vehicle-miles of travel (items C1432-1437) represent estimated travel by passenger cars, motorcycles, buses, and trucks on the Federal-aid system of roads, arterial highways, and other local roads and streets.

Highway speed data (items C1438-1440) are for all vehicles and only for highways with a speed limit of 55 miles per hour. These data are based on an annual certification of speed-limit

enforcement required from each State highway agency as part of a program that monitors the 55-miles-per-hour speed limit. The data have not been adjusted for speedometer or equipment errors.

State motor-fuel taxes and related receipts (item C1452) include the revenues from State taxes on all motor vehicle fuels and related receipts in connection with motor-fuel taxation and administration. In most States, however, the tax on special fuels (fuels other than gasoline and gasohol) is applicable only to the gallonage used on the highways. For the few States that apply the tax to all fuel sold, the revenue and refunds covering the nonhighway portion of these special fuels are excluded.

Vehicle registration data are collected by the Federal Highway Administration from State motor vehicle registration agencies. Accordingly, registration practices and dates do vary. Data presented here are on a calendar-year basis and include publicly owned motor vehicles.

Trucks and truck miles data (items C1474 and C1475) are based on a probability sample of private and commercial trucks registered (or licensed) in a State during 1982. Data on physical and operational characteristics of the truck population are published as a result of the survey.

Fatal motor vehicle accident data (items C1482-1485) are from the Fatal Accident Reporting System. Data shown include only those accidents that result in a death within 30 days.

For a discussion of the census of population, see the general note for items A2-32. For definitions of items under "Journey to work," see the text for items A117-121.

#### **Items C1491-1519. Air transportation—selected characteristics, selected years, 1980-1983.**

Source: U.S. Federal Aviation Administration. Items C1491-1504 and C1511-1519: *FAA Statistical Handbook of Aviation*, annual; items C1505-1510: *Airport Activity Statistics of Certificated Route Air Carriers*, annual.

Airport facilities (items C1491-1494) include U.S. civil and joint-use facilities. A privately owned airport (items C1492 and C1494) is an airport that is owned by a private individual or corporation.

Airport operations (items C1495-1498) represent takeoffs and landings and are for operations handled by FAA air traffic controllers. General aviation (items C1496 and C1498) comprises all civil flying (including such commercial operations as regional/commuter airlines, air taxis, agricultural application, power-line patrol, etc.) but excludes certificated route air carriers and supplemental operators.

Scheduled air carriers (items C1499-1504) hold certificates of public convenience and necessity, issued by the Civil Aeronautics Board, authorizing the performance of scheduled service over specified routes, and a limited amount of nonscheduled service. Scheduled service is transport service operated over an air carrier's certificated routes, based on published flight schedules, including extra sections.

Air traffic hubs (items C1505-1510) are the cities or metropolitan areas requiring aviation services. They are not air-

ports. To qualify as a hub, the community's percentage of total enplaned passengers in all services in all operations of U.S. certificated route carriers within the 50 States, District of Columbia, and other U.S. areas designated by the Federal Aviation Administration must be at least .05. Aircraft departure represents an aircraft takeoff made at an airport. Enplaned passengers represent the total number of revenue passengers boarding aircraft.

The data for general aviation aircraft (item C1515) were obtained from the General Aviation Activity and Avionics Survey, which was mailed to the owners of a random sample of 27,827 registered general aviation aircraft from approximately 260,505 total registered. Since these figures were derived from a sample—not the total population of aircraft—they are subject to sampling error. Users are cautioned in the use of these figures, especially the smaller estimates.

A student pilot (item C1517) may not operate an aircraft that is carrying a passenger or that is carrying property for compensation or hire. A private pilot (item C1518) may not act as a pilot-in-command of an aircraft carrying passengers for compensation or hire nor act as such person for compensation or hire. A commercial pilot (item C1519) may act as pilot-in-command of an aircraft carrying passengers for compensation or hire and act as such person for compensation or hire.

## ENERGY AND UTILITIES

**Items C1520-1564. Energy—consumption, expenditures, and prices, selected years, 1973-1982.**

Source: U.S. Energy Information Administration. Items C1520-1538: *State Energy Data Report* (DOE/EIA-O214), and *State Energy Data Report Supplement, Consumption Estimates, 1960-1982* (DOE/EIA-O214 (82)S, both biennial; items C1539-1564: *State Energy Price and Expenditure Report, 1970-1981* (DOE/EIA-O376 (81)).

Energy consumption data are estimated using the State Energy Data System, which is maintained by the Energy Information Administration. Consumption by type does not include wood-derived fuel consumed by the industrial sector and the residential sector. In 1981, approximately 1.4 and .8 quadrillion British thermal units (Btu) of wood-derived fuel were consumed by these sectors, respectively. Also excluded are small quantities of other energy sources for which consistent historical data are not available, such as (1) solar energy obtained by the use of thermal and photovoltaic collectors; (2) wind energy; and (3) geothermal, biomass, and waste energy other than that consumed at the electric utilities. Hydroelectric consumption (item C1533) includes industrial and electric production and net imports of electricity. Figures for the residential sector (item C1535) represent energy consumed by private household establishments primarily for space heating, air conditioning, cooking, and clothes drying. Data for the commercial sector (item C1536) cover energy consumed by nonmanufacturing business establishments, such as hotels and other service enterprises, and health, social, and educational institutions, and energy consumed by Federal, State,

and local government. Statistics for the industrial sector (item C1537) include energy consumed in manufacturing, construction, mining, and agricultural establishments. Figures for the transportation sector (item C1538) cover energy consumed to move people and commodities in both the public and private sectors, including military, railroad, vessel bunkering, and marine uses, as well as pipeline transmission of natural gas. Data for the electric utility sector represent energy consumed by privately and publicly owned establishments that generate electricity primarily for resale.

Expenditures (items C1539-1555) are consumer expenditures; that is, they represent the money spent directly by consumers to purchase energy. Expenditures are derived by multiplying the amount of energy used times the price per unit paid by the consumer. They vary widely by State due to differences in population, climate, amount and type of industry, fuel consumed, and other factors.

Data for prices (items C1556-1564) represent estimated average prices. Energy prices also vary widely by State due primarily to the amount and type of fuel used.

**Items C1565-1597. Utilities—electric, 1980, 1982, and 1983; and gas, 1983.**

Source: Items C1565-1578: U.S. Energy Information Administration, 1980: *Power Production, Fuel Consumption, & Installed Capacity Data—1980*; thereafter, *Electric Power Annual*. Items C1579-1587: Edison Electric Institute, Washington, DC, *Statistical Yearbook of the Electric Utility Industry, 1983*, annual; items C1588-1597: American Gas Association, Arlington, VA, *Gas Facts, 1983* (copyright).

Installed capacity represents the full-load continuous rating of a generator, prime mover, or other electrical equipment as designated by the manufacturer. It is measured as of December 31 of the year stated.

Figures from the Edison Electric Institute (items C1579-1587) were compiled from reports of investor-owned electric utilities and other agencies contributing to the public supply, as well as from some governmental agencies and other sources. Revenue figures (items C1585-1587) are for investor-owned electric utilities only.

The gas utility industry (items C1588-1597) consists of the companies engaged in natural gas transmission and distribution. The data shown are based mainly on figures provided by individual gas companies through the "Uniform Statistical Report." For nonreporting companies (representing approximately 3 percent of the industry), data are estimated.

## COMMUNICATIONS

**Items C1598-1603. Printing and publishing, and communications, 1982.**

Source: U.S. Bureau of the Census, *1982 County Business Patterns*, annual.

For a discussion of employment in relation to the *County Business Patterns*, see the text for items A195-204.

The printing and publishing group (items C1598-1600) includes establishments engaged in printing by one or more of the common processes, such as letterpress, lithography, gravure, or screen; establishments that perform services for the printing trade, such as bookbinding, typesetting, engraving, photoengraving, and electrotyping; and establishments engaged in publishing newspapers, books, and periodicals, regardless of whether or not they do their own printing.

The communications group (items C1601-1603) includes establishments furnishing point-to-point communications services whether by wire or radio, and whether intended to be received aurally or visually; and radio and television broadcasting services for the exchange or recording of messages are also included.

**Items C1604-1635. Newspapers, 1970, 1980, and 1983; broadcast stations, 1985; households with cable TV, 1985; and cable television systems, 1975 and 1984.**

Source: Items C1604-1621: Editor & Publisher Co., Inc., New York, NY, *Editor and Publisher International Yearbook*, annual (copyright); items C1622-1626: U.S. Federal Communications Commission, unpublished data; items C1627 and C1628: A.C. Nielson, New York, NY, *U.S. Television Household Estimates*, September 1985 (copyright); items C1629-1635: Television Digest, Inc., Washington, DC, *Television and Cable Factbook*, annual.

The number of newspapers (items C1604-1606 and C1613-1615) are as of February of the following year. Circulation figures (items C1607-1609 and C1616-1618) are as of September 30. Circulation figures are based on the principal community served by the paper. The data are for English-language papers only.

The count of broadcast stations (items C1622-1626) represents the number licensed as of January. AM-FM stations that filed combined reports with the FCC are counted both as AM and FM stations.

Households with cable TV (items C1627 and C1628) are as of July. The count of households used to calculate the percent of households with cable TV was obtained from the source agency. The estimates are for January 1986 and appear in the source publication.

Television Factbook counts as one cable TV system (items C1629 and C1633) those subscribers in a community or communities that are principally served by one headend. Subscriber counts are received from system operators. Computation of subscribers (items C1631 and C1635) is based on the Federal Communication Commission's formula wherein (1) total individual-dwelling subscribers are added to (2) total revenues from bulk-rate subscribers (e.g., motels) divided by the rate of individual-dwelling units.

## WHOLESALE TRADE

**Items C1636-1654. Wholesale trade—selected characteristics, 1977 and 1982.**

Source: U.S. Bureau of the Census, *1977 and 1982 Census of Wholesale Trade, Geographic Area Statistics* (series WC77-A and WC82-A).

For a discussion of the census of wholesale trade, see the general note for items A245-252. For definitions of establishments and merchant wholesalers, see the text for items A245-246; for sales, see the text for items A247-250; and for paid employees and annual payroll, see the text for items A251 and A252.

The motor vehicle and automotive parts and supplies group (item C1642) covers establishments primarily engaged in the wholesale distribution of automobiles and other motor vehicles, automotive parts and supplies, and tires and tubes. The metals and minerals group (item C1643) includes such establishments as metals service centers and offices that are primarily engaged in marketing ferrous and nonferrous metal semifinished products, as well as establishments primarily engaged in the wholesale distribution of coal and other minerals and ores. The electrical goods group (item C1644) includes establishments primarily engaged in the wholesale distribution of electrical generating, distributing, and wiring equipment. It also includes household appliances whether electrically, manually, or mechanically powered, such as washing machines powered by gasoline motors and sewing machines powered manually. The machinery, equipment, and supplies group (item C1645) covers establishments primarily engaged in wholesaling commercial machines and equipment; establishments primarily engaged in marketing, construction and mining, and farm and garden, and industrial machinery and equipment as well as industrial supplies; and establishments primarily engaged in the distribution of professional, service establishment, and transportation (except motor vehicles) equipment and supplies. The groceries and related products group (item C1646) includes establishments primarily engaged in the wholesale distribution of a general line of groceries, frozen foods, dairy products, poultry and poultry products, confectionery, fish and seafoods, meats and meat products, and fresh fruits and vegetables. It includes establishments primarily engaged in the distribution of soft drinks and the distribution and bottling of natural spring and mineral waters; establishments primarily engaged in the bottling of soft drinks are not included. The farm-product raw materials group (item C1647) includes establishments primarily engaged in buying and/or marketing cotton, grain, livestock, and other farm-product raw materials. The petroleum and petroleum products group (item C1648) covers establishments primarily engaged in wholesaling petroleum and petroleum products.

## RETAIL TRADE

**Items C1655-1692. Retail trade—selected characteristics, 1977 and 1982.**

Source: U.S. Bureau of the Census, 1977 and 1982 *Census of Retail Trade, Geographic Area Statistics* (series RC77-A and RC82-A).

For discussion of the census of retail trade and definitions of retail trade items, see the general note and related text for items A253-282.

The grocery stores group (items C1666 and C1679) includes establishments primarily selling (1) a wide variety of canned or frozen foods, such as vegetables, fruits, and soups; (2) packaged or bulk dry groceries, such as tea, coffee, cocoa, dried fruits, spices, sugar, flour, and crackers; and (3) other processed foods and nonedible grocery items. These establishments often also sell smoked and prepared meats, fresh fish and poultry, fresh vegetables and fruits, and fresh or frozen meats. Establishments commonly known as supermarkets, food stores, and delicatessens are included if receipts from sales of groceries and food items for off-premise preparation and consumption are 50 percent or more of total sales.

## SERVICE INDUSTRIES

**Items C1693-1721. Tax-exempt service establishments and taxable service industries—selected characteristics, 1982.**

Source: U.S. Bureau of the Census, 1982 *Census of Service Industries, Geographic Area Statistics* (series SC82-A).

For a discussion of the census of service industries, see the general note for items A283-292. For a definition of establishments, see the text for items A245 and A246; for establishments with payroll, paid employees, annual payroll, and receipts, see the text for items A283-292.

Personal services (items C1699 and C1711) include establishments primarily engaged in providing services generally involving the care of one's personal appearance or apparel, such as barber and beauty shops, dry-cleaning plants, laundries, and photographic studios.

Business services (items C1700 and C1712) include establishments primarily engaged in providing services, not elsewhere classified, to business enterprises on a fee or contract basis. Computer and data-processing services (items C1701 and C1713) are establishments primarily engaged in providing services in computer programming, systems design and analysis, and other computer software; and establishments primarily engaged in providing data-processing services to others.

Educational services (items C1706 and C1718) are establishments furnishing formal academic or technical courses, correspondence schools, commercial and trade schools, and libraries. The data exclude elementary and secondary schools, colleges, and universities.

Social and other services (items C1707 and C1719) include establishments providing social services and rehabilitation services to those persons with social or personal problems requiring special services, to the handicapped, and to the disadvantaged. Also included are organizations soliciting funds to be used directly

for these and related services, as well as community development and planning agencies.

## BANKING AND INSURANCE

**Items C1722-1754. Domestic deposit market shares; deposits at largest banking organizations; commercial banks; mutual savings banks; and savings and loan associations, 1980 and 1983.**

Source: Items C1722: Compiled from sources for items C1723-1726; item C1723 and C1736-1742: U.S. Federal Deposit Insurance Corporation (FDIC), unpublished data; item C1724: U.S. Federal Home Loan Bank Board, *Summary of Savings Accounts by Geographic Areas*, annual; item C1725: National Council of Savings Institutions, Washington, DC, 1984 *Fact Book of National Council of Savings Institutions*; item C1726: Credit Union National Association, Inc., Madison, WI, *Credit Union Report*, annual; items C1727-1735: Board of Governors of the Federal Reserve System, *Annual Statistical Digest*; items C1743 and C1744: U.S. Federal Deposit Insurance Corporation, *Annual Report*; items C1745-1754: U.S. Federal Home Loan Bank Board, *Asset and Liability Trends*, annual.

Data for credit unions (item C1726) are preliminary estimates based on projections from 15,000 reporting credit unions.

Gross loans include commercial and industrial loans, real estate loans, loans to domestic commercial and foreign banks, loans to other financial institutions, securities loans, etc. Equity capital includes stocks, surpluses, and undivided profits and reserves. For an explanation of time deposits, see the text for items A293-295.

**Items C1755-1763. Life insurance—number of companies, benefit payments, and insurance in force, 1983.**

Source: American Council of Life Insurance, Washington, DC, *Life Insurance Fact Book*, annual.

These data were derived from annual statements provided by life insurance companies and from surveys conducted by the American Council of Life Insurance. In addition, input is provided by commercial publishers of life insurance statistics, government agencies, and other life insurance organizations.

Payments and all life insurance policies in force refer to payments to, and policies on, residents of the United States, whether issued by U.S. or foreign companies. The inclusion of foreign companies in some figures accounts for a small amount of the total. Benefit payments include death payments, matured endowments, annuity payments, disability payments, surrender values, and policy dividends.

## ELECTIONS

**Items C1764-1820. Popular vote for President, vote cast for Senators and Representatives, Representatives elected, membership in U.S. House of Representatives, and composition of Senate and House of Representatives, selected years, 1960-1985.**

Source: Items C1764-1797: Elections Research Center, Washington, DC, *America Votes*, biennial (copyright); items C1798-1805: Compiled by U.S. Bureau of the Census from Congressional Quarterly, Inc., Washington, DC, *Congressional Quarterly Weekly Report*, vol. 43, No. 15, April 13, 1985 (copyright); items C1806-1808: U.S. Bureau of the Census, 1980 *Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC80-1-A); items C1809-1820: U.S. Congress, Joint Committee on Printing, *Congressional Directory*, biennial, and unpublished data.

For a discussion of vote cast for President and explanations of percent of vote for leading party and possible revisions to State election figures, see the text for items A297 and A298. Vote cast for Senators and members of the U.S. House of Representatives excludes elections to fill vacancies of unexpired terms.

State law does not require tabulation of votes for unopposed candidates in Arkansas, Florida, and Oklahoma.

In each State, totals for vote cast for Representatives (items C1790-1797) represent the sum of votes cast in each Congressional District or votes cast for Representatives at Large in States where only one member is elected. In all years, there are numerous districts within the State where either the Republican or Democratic party had no candidate. In some States, the Republican and Democratic vote includes votes cast for the party candidate by endorsing parties.

#### **Items C1821-1836. Vote cast for governor and composition of State legislatures, selected years, 1978-1984.**

Source: Items C1821-1828: Elections Research Center, Washington, DC, *America Votes*, biennial (copyright); items C1829-1836: The Council of State Governments, Lexington, KY, *Book of the States* and its *Supplement I*, both biennial (copyright).

Vote cast for governor (items C1821-1828) represent total votes cast, including scattered votes. For an explanation of vote for leading party, see the text for items A297 and A298. In Kentucky, Louisiana, Mississippi, New Jersey, and Vermont, governors are not elected in even years.

Data shown for composition of State legislatures (items C1829-1836) refer to election years in most States and to odd-year elections the previous years in a few States. The figures reflect the immediate results of elections, including holdover members in partial renewal situations. The data do not reflect vacancies and independent members.

#### **Items C1837-1861. Voting-age population, percent voting-age population casting vote for President and for U.S. House of Representatives, number of Black and Hispanic elected officials, and number of women holding State and local public offices, selected years, 1972-1984.**

Source: Items C1837-1846: Compiled by U.S. Bureau of the Census, *Current Population Reports*, series P-25, No. 948; items C1847-1854: Compiled by U.S. Bureau of the Census from Elec-

tions Research Center, Washington, DC, *America Votes*, biennial (copyright); items C1855-1857: Joint Center for Political Studies, Washington, DC, *Black Elected Officials: A National Roster* (copyright); item C1858: National Association of Latino Elected and Appointed Officials, Washington, DC, unpublished data; items C1859-1861: Center for the American Woman and Politics, The Eagleton Institute of Politics, Rutgers University, New Brunswick, NJ, information releases.

The voting-age population (items C1837-1846) relates to persons 18 years old and over in all States and the District of Columbia. The figures include Armed Forces personnel stationed in each State, aliens, and the institutional population. The population overseas who would be eligible to vote by absentee ballot is excluded.

State law does not require tabulation of votes for unopposed candidates in Arkansas, Florida, and Oklahoma.

As of January 1984, no Black elected officials (items C1855-1857) had been identified in Idaho, Montana, New Hampshire, North Dakota, and South Dakota.

Statistics for number of women holding State and local public offices (items C1859-1861) cover women holding offices in State legislatures, county commissions, mayoralties, townships, and local councils.

For a discussion of the census of population, see the general note and text for items A2-32.

## **VETERANS**

#### **Items C1862-1873. Veterans—military service and benefits, 1983.**

Source: U.S. Veterans Administration. Items C1862-1868: *Annual Report of Administrator of Veterans Affairs*; items C1869-1873: Unpublished data.

Total figures represent estimates of the veteran population as of September 30, 1983. The data refer to men and women in civil life who had served on active duty in the Armed Forces of the United States during the following periods: (1) World War I (between April 6, 1917, and November 11, 1918, or April 1, 1920, for service in Russia); (2) World War II (between September 16, 1940, and July 25, 1947); (3) Korean conflict (between June 27, 1950, and February 1, 1955); (4) Vietnam era (between August 4, 1964, and May 8, 1975); and (5) peacetime: Service between January 31, 1955, and August 5, 1964, and the Post-Vietnam era (service only after May 7, 1975).

Data on military service (items C1862-1868) are estimates as of September 30, 1983. These estimates were developed from benchmark veteran population statistics as of April 1, 1980, based on 1980 Census of Population data on veterans' place of residence, extended to September 30, 1982, on the basis of 1975 to 1980 veteran interstate migration statistics from the 1980 Census of Population. These estimates are independent of, and not directly comparable with, earlier estimates published previously by the Veterans Administration.

Veterans' benefits data (items C1869-1873) are estimates for the year ending September 30, 1983. Compensation and pension benefits exclude statutory burial awards, special clothing allowance, mortgage life insurance, invalid lifts, headstones and markers, and other expenses. Education and training benefits

include educational assistance for wives and widows, sons and daughters of deceased or totally disabled veterans, and post-Korean-conflict veterans; they exclude benefits paid to disabled veterans training under the Vocational Rehabilitation Program.

- 677 Appendix 2. Alphabetical Listing of PMSA's with CMSA's
- 679 Appendix 3. New England Metropolitan Statistical Areas
- 683 Appendix 4. Central Cities by State, Showing MSA/CMSA Codes
- 687 Appendix 5. Component Counties of Metropolitan Statistical Areas, by State, October 1984

## Appendix 1. Metropolitan Area Concepts and Components

Statistics for metropolitan areas shown in the *State and Metropolitan Area Data Book* represent areas designated by the U.S. Office of Management and Budget (OMB) as standard metropolitan statistical areas (SMSA's) or metropolitan statistical areas (MSA's). Effective June 30, 1983, OMB changed the basic term from SMSA to MSA and revised the geographic definitions of many individual metropolitan areas; some new areas were defined, and some areas were redesignated as PMSA's or CMSA's (see further explanation below). The revised definitions appear in OMB press release 83-20 of June 27, 1983. The official standards for defining MSA's appeared in the *Federal Register*, January 3, 1980 (part 6). Revisions of MSA definitions were made by OMB effective 1984 and 1985.

The list of areas with geographic codes and population totals shown on p. V, refers to the definitions in effect on October 12, 1984. On that date, there were 261 MSA's as well as 21 CMSA's comprising 73 PMSA's (including 4 MSA's, 1 CMSA, and 2 PMSA's in Puerto Rico). The figures in tables 1a, 1b, and 1c below exclude the areas in Puerto Rico.

The general concept of a metropolitan area is one of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. Standard definitions of metropolitan statistical areas were first issued in 1949 by the then Bureau of the Budget (predecessor of OMB), under the designation "Standard Metropolitan Areas"; the term was changed to SMSA in 1959. From 1977 to 1981, the SMSA's were the responsibility of the Office of Federal Statistical Policy and Standards, Department of Commerce.

The criteria for the establishment and definition of SMSA's were modified in 1958, 1971, and 1975. The current standards were adopted in January 1980; they provide that each MSA must include at least:

- (a) One city with 50,000 or more inhabitants, or
- (b) A Census Bureau-defined urbanized area of at least 50,000 inhabitants and a total MSA population of at least 100,000 (75,000 in New England).

The standards provide that the MSA include as "central county(ies)" the county in which the central city is located, and adjacent counties, if any, with at least 50 percent of their population in the urbanized area. Additional "outlying counties" are included if they meet specified requirements of commuting to the central counties and of metropolitan character (such as population density and percent urban). In New England, the MSA's are defined in terms of cities and towns rather than counties.

The 1980 standards provide that within metropolitan complexes of 1 million or more population, separate component areas are defined if specified criteria are met. Such areas are designated primary metropolitan statistical areas (PMSA's); and any area containing PMSA's is designated a consolidated metropolitan statistical area (CMSA). Besides the 21 CMSA's, there are 15 MSA's of 1 million or more within which no component PMSA's are established. Of the 73 PMSA's, most were formerly SMSA's, but some were newly established in 1983.

Of the 21 CMSA's, most were previously recognized as standard consolidated statistical areas (SCSA's), but 5 were formerly SMSA's within which PMSA's were newly qualified in 1983.

The standards adopted in 1980 were implemented in two stages. First, they were used to define a group of 36 new areas in June 1981. The 323 SMSA's as of June 30, 1981, were reported in the 1980 census tabulations and publications. Next, the boundaries of all SMSA's were reviewed in 1982-83 under the new standards after 1980 commuting data became available.

Revised 1980 standards for determining central cities and titles were implemented as part of the 1982-83 review. The largest city in each MSA is designated a "central city"; in addition there may be additional central cities if specified requirements are met. The title of each MSA consists of the name(s) of up to three of its central cities and the name of each State into which the MSA extends. However, a central city generally is not included in an MSA title unless it has at least one-third the population of the area's largest city. Prior to 1983, virtually all central cities appeared in area titles. An MSA may include other cities of 50,000 or more besides its central or title cities.

One report relating to the new MSA definitions has been published as *1980 Census of Population, Supplementary Report, Metropolitan Statistical Areas* (PC80-S1-18). A second supplementary report showing sample characteristics for MSA's and their central cities was in preparation at the time this text was drafted.

**New England MSA's and NECMA's.**—Because MSA's in New England are defined in terms of cities and towns rather than counties, some statistical data that are available only for counties cannot be compiled for individual New England MSA's. Therefore, for New England areas, data are shown for New England County Metropolitan Areas (NECMA's) in tables A and B and MSA's in appendix 3. The NECMA's provide a county version of the New England areas, but do not replace New England MSA's as the standard areas. NECMA's are defined corresponding to the three CMSA's in New England and for the portion of the New York-Northern New Jersey-Long Island CMSA

in Connecticut. There are no NECMA definitions corresponding to New England PMSA's.

**Effect of changes in MSA definition.**—Changes in the definitions of MSA's since 1949 have consisted chiefly of (1) the recognition of new areas as, for example, cities reached 50,000 population; and (2) the addition of counties (or towns in New England) to existing MSA's as new census data showed them to qualify. Also, several formerly separate MSA's have been merged, and occasionally territory has been transferred from one MSA to another or from an MSA to nonmetropolitan territory. Comparisons of MSA figures over time may be affected in cases

where the MSA definitions were changed. To maintain comparability, data for an earlier period have been revised in this volume where possible, to reflect the MSA boundaries of the more recent period. However, this could not always be done; for data based on a sample survey, in particular, it is usually not possible to revise the data to reflect changes in MSA definitions that occurred after the survey was made.

In tables 1a, 1b, and 1c that follow, data are given for MSA's as defined for specified dates, thereby indicating the extent of change in population and land area resulting from revisions in definitions.

**TABLE 1a. NUMBER, POPULATION, AND LAND AREA OF MSA's AS DEFINED AT SPECIFIED DATES, 1950 TO 1985**

[The differences in population shown here for each year in the successive columns of the table result entirely from net expansion of metropolitan territory through changes in the MSA definitions. The differences in population shown for each MSA definition (on the successive lines of the table) result entirely from population changes within that territory, unaffected by changes in MSA definitions. The changes in 1980 land area result entirely from net expansion of MSA territory. All data include Alaska and Hawaii and exclude Puerto Rico. Subtraction of any line of the table from the line below will show the net effect of change in population and land area undergone by the MSA's as the result of changes in definitions between the specified dates. Such changes typically occurred throughout the period, not on any single date, and may have included subtractions from, as well as additions to, MSA territory. Census population data for 1970 include corrections made since publication. The area data for the 1950 and 1960 census definitions of MSA's differ from the data published in those censuses because they are based on a remeasurement of land areas made during the 1960's, and also reflect changes in inland water area occurring up to 1970]

MSA DEFINITION AS OF—	Number of MSA's	POPULATION					Land area, 1980 (sq. mi.)
		1950, Apr. 1	1960, Apr. 1	1970, Apr. 1	1980, Apr. 1	1984, July 1	
1950 census (Mar. 1952) . . .	169	184,853,700	106,344,548	122,184,836	128,839,422	133,153,636	207,146
1960 census (Nov. 1960) . . .	212	89,316,903	<sup>2</sup> 112,885,139	130,982,661	140,793,427	146,319,076	309,112
1964 (Aug. 31) <sup>3</sup> . . . . .	217	91,644,188	115,876,343	134,700,911	145,503,863	151,557,819	348,861
1968 (Jan. 31) <sup>4</sup> . . . . .	230	93,629,986	118,413,604	137,976,252	149,811,057	155,979,777	377,581
1970 census (Feb. 28, 1971) . . . . .	243	94,579,008	<sup>5</sup> 119,593,498	<sup>6</sup> 139,479,806	151,662,221	157,873,598	386,886
1974 (Apr. 30) <sup>7</sup> . . . . .	265	<sup>8</sup> 100,219,707	<sup>9</sup> 126,613,710	148,198,993	162,753,335	169,888,909	491,249

# County and City Data Book, 1983

## 10th Edition

**A must for . . .**

- Market researchers  
Business analysts  
Legislators  
Social scientists  
Planners
- Economists  
Teachers  
Librarians  
Students  
. . . The list is endless

The County and City Data Book, 1983, is an indispensable reference to social and economic data on States, counties, cities, and places, all in one compact volume. It contains information on a variety of subjects, including population, age distribution, educational attainment, money and personal income, housing value and ownership, births, deaths, poverty, local and city government finance and employment, health care, human services, business, banking, climate, elections, and social programs. Many new data items are presented for the first time in the Data Book, including nurses, nursing homes, Medicare, journey to work, workers in families, and Moody's bond ratings. Also featured are rankings of selected socioeconomic measures for cities and counties.

The County and City Data Book, 1983, holds 1,064 factfilled pages on the entire United States; 50 States; and the District of Columbia; census regions; 9 census divisions; 3,137 counties and county equivalents; 945 incorporated cities with 25,000 or more inhabitants; and approximately 10,000 places, towns, and townships of 2,500 or more inhabitants in 1980.

It presents 216 data items for regions, divisions, States, counties, and county equivalents; 170 items for cities with 25,000 or more inhabitants in 1980; and 15 items for places with 2,500 or more inhabitants in 1980; and 15 items for towns and townships of 2,500 or more in 11 States.

The County and City Data Book, 1983, is an invaluable guide to your data needs and to the needs of your organization. Use the GPO order form below to order your copy today. \$24 (clothbound.)

An outline of the table headings showing the data included in this volume can be obtained at no charge. Also, computer tapes and diskettes containing the data are also available for purchase. For additional information, call 301/763-1034, or write:

## **The State and Metropolitan Area Data Book, 1986**

has up-to-date statistics on the United States, States, and metropolitan areas. It presents the latest data on such subjects as population, health, income, education, labor force, Federal programs, and business.

- **Metropolitan Areas**

Nearly 300 items of data

Shown for all 330 metropolitan areas—using the latest definitions

Shown for county components and central cities, too

Organized by State for easy comparisons

- **States**

Nearly 1,900 new and updated subject items

Selected time series included

- **Rankings**

Top 75 metro areas in rank order for 12 statistics

More ranks for all metro areas

States ranked for over 50 variables

- **And More...**
